

Choose a Safe Water Container

After treating your water, it is important to store it in a safe water container. Safe water storage containers prevent people from dipping their hands, cups, and utensils into the water.

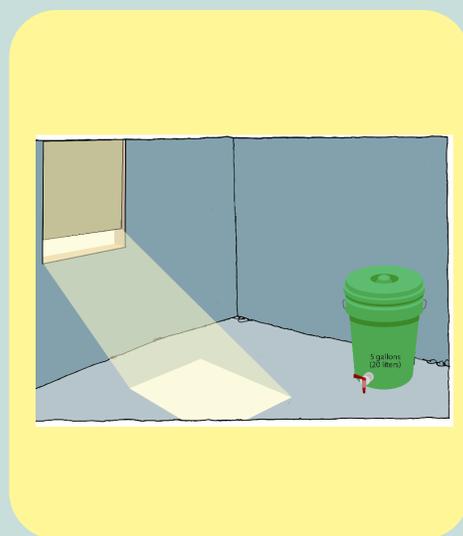

Choose a safe water storage container

1 Make sure the container has a lid that fits tightly

2 The container should have a small opening or tap

3 Keep stored water in a cool place away from sun

4 Clean container regularly

5 Do NOT use containers that were used to hold toxic chemicals (bleach, pesticides)
