

QuickStats

FROM THE NATIONAL CENTER FOR HEALTH STATISTICS

Percentage* of Adults with Fair or Poor Health,[†] by Home Ownership Status[§] and Age Group — National Health Interview Survey,[¶] United States, 2014

* With 95% confidence intervals indicated with error bars.

[†] Defined by family respondent's answer to the following question on the family core questionnaire: "Would you say [your] health in general is excellent, very good, good, fair, or poor?"

[§] Defined by family respondent's answer to the following question on the family core questionnaire: "Is this house/apartment owned or being bought, rented, or occupied by some other arrangement by [you or someone in your family]?"

[¶] Estimates are based on household interviews of a sample of the noninstitutionalized U.S. civilian population and are derived from the National Health Interview Survey family core component.

In 2014, 7% of renters aged 18–39 years assessed their health as fair or poor compared with 4% of homeowners. Among adults aged 40–64 years, 23% of renters reported fair or poor health compared with 11% of homeowners. Among adults aged ≥65 years, 34% of renters reported fair or poor health compared with 19% of homeowners. For both renters or homeowners, the percentage of adults with fair or poor health increased with increasing age.
