

## QuickStats

FROM THE NATIONAL CENTER FOR HEALTH STATISTICS

### Age-Adjusted Death Rates\* from Prostate Cancer,<sup>†</sup> by Race/Ethnicity — National Vital Statistics System, United States, 1999–2017

\* Deaths per 100,000 population, age-adjusted to the 2000 U.S. standard population.

<sup>†</sup> Prostate cancer deaths were those with the *International Classification of Diseases, Tenth Revision* (ICD-10) underlying cause of death code C61.

In 2017, the age-adjusted prostate cancer death rate among all males was 18.7 per 100,000, down from 31.3 in 1999. During 1999–2017, non-Hispanic black males had the highest prostate cancer death rate. In 2017, the rate for non-Hispanic black males was 36.8, compared with 17.8 for non-Hispanic white males and 15.4 for Hispanic males.
