Worktable Orig25OR. Death rates for 113 selected causes, alcohol-induced causes, drug-induced causes, and injury by firearms, by 10-year age groups, Hispanic origin, race for non-Hispanic population, and sex: United States, 2003

[Rates per 100,000 population, in specified group. Rates based on populations estimated as of July 1, 2003. Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated separately by race: data for non-Hispanic persons are tabulated by race. Race categories are consistent with the 1977 Office of Management and Budget guidelines. California, Hawaii, Idaho, Maine, Montana, New York, and Wisconsin reported multiple-race data in 2003. The multiple-race data for these states were bridged to the single race categories of the 1977 Office of Management and Budget standards for comparability with other States; see http://www.cdc.gov/nchs and refer to "Technical Appendix from Vital Statistics of the United States: Mortality, 2003." Data for Hispanic origin should be interpreted with caution between reporting Hispanic origin on death certificates and on censues and surveys. For explanation of asterisks preceding cause-of-death codes, see http://www.cdc.gov/nchs and refer to "Technical Appendix from Vital Statistics of the United States: Mortality, 2003"]

Cause of death (Based on the International Classification of Diseases, Tenth Revision, 1992), Hispanic origin, race for non-Hispanic population, and sex	All ages 1/	Under 1 year 2/	1-4 years	5-14 years	15-24 years	25-34 years	35-44 years	45-54 years	55-64 years	65-74 years	75-84 years	85 years and over
