SEPTEMTER 27

Time	
9:30-10:30	Richard Klein, Former chief Office of Analysis and Epidemiology

Aim: Big data use and applications in the government institutions.

Governmental partnership
- Whether the NCHS has some partnerships with other government or private organizations to share data and/or information?
- How is the information which is provided by the NCHS used by other government-organizations?
- How does it help performing their tasks (for instance prevention of illness, probably increasing the quality of treatments, for financial goals like cost reduction or budgeting tasks, etc.)

Data-accessibility for your organization
- Which data sources are available, under what conditions (Privacy-aspects, data-ownership, liability)?
- (How) do you co-operate with private organizations like insurance firms, hospitals, etc.?

Linking of data sources
- What way do you link different sources of information? Under what conditions this has to be done?
- What do you see as the main future developments regarding to the growing availability of new electronic data sources?
- How does your organization react on these developments?
