# National Vital Statistics Reports

Volume 64, Number 12 December 23, 2015

### Births: Final Data for 2014

by Brady E. Hamilton, Ph.D.; Joyce A. Martin, M.P.H.; Michelle J.K. Osterman, M.H.S.; Sally C. Curtin, M.A.; and T.J. Mathews, M.S., Division of Vital Statistics

#### **Abstract**

Objectives—This report presents 2014 data on U.S. births according to a wide variety of characteristics. Data are presented for maternal age, live-birth order, race and Hispanic origin, marital status, attendant at birth, method of delivery, period of gestation, birthweight,

and plurality. Birth and fertility rates are presented by age, live-birth order, race and Hispanic origin, and marital status. Selected data by mother's state of residence and birth rates by age and race of father also are shown. Trends in fertility patterns and maternal and infant characteristics are described and interpreted.

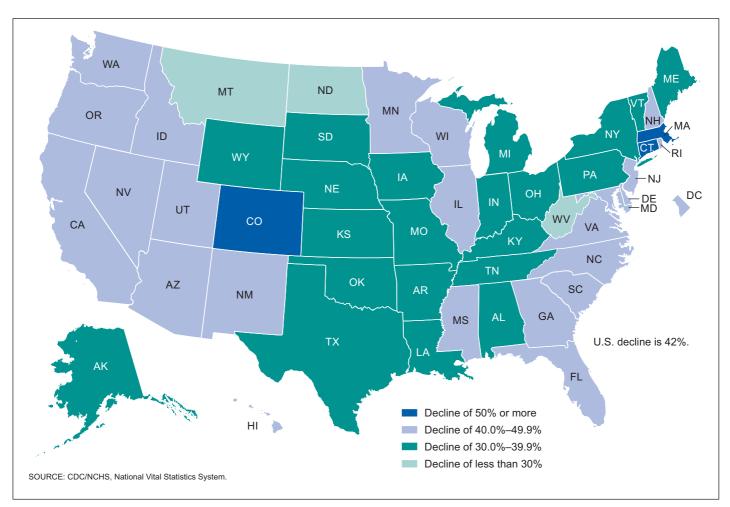

Figure 1. Percent change in the birth rate for females aged 15-19: United States, each state and territory, 2007-2014

2

*Methods*—Descriptive tabulations of data reported on the birth certificates of the 3.99 million births that occurred in 2014 are presented.

Results—In 2014, 3,988,076 births were registered in the United States, up 1% from 2013. The general fertility rate rose slightly to 62.9 per 1,000 women aged 15–44, the first increase in the rate since 2007. The teen birth rate fell 9% from 2013 to 2014, to 24.2 per 1,000 females aged 15–19. Birth rates declined for women in their early 20s but increased for women aged 25–39. The total fertility rate (estimated number of births over a woman's lifetime) rose slightly to 1,862.5 births per 1,000 women. The birth rate for unmarried women declined for the sixth straight year. The cesarean delivery rate declined to 32.2%. The preterm birth rate declined 1% to 9.57%, but the low birthweight rate was essentially unchanged at 8.00%. The 2014 twin birth rate was 33.9 per 1,000 births, a new high for the United States; the triplet and higher-order multiple birth rate dropped 5% to 113.5 per 100,000 total births.

**Keywords:** birth certificate • maternal and infant health • birth rates • maternal characteristics

### **Highlights**

- A total of 3,988,076 births were registered in the United States in 2014, up 1% from 2013. The number of births rose among each of the largest race and Hispanic origin groups (non-Hispanic white, non-Hispanic black, and Hispanic women) from 2013 to 2014.
- The **general fertility rate** rose less than 1% from 2013 to 62.9 births per 1,000 women aged 15–44. The total fertility rate also rose in 2014, to 1,862.5 births per 1,000 women.
- The birth rate for teenagers aged 15–19 declined 9% from 2013 to 2014, to 24.2 births per 1,000 females aged 15–19, yet another historic low for the nation; rates declined for teenagers in all race and Hispanic origin groups.
- Birth rates also declined to a record low for women in their early 20s in 2014. Rates rose for women in their late 20s, 30s, and early 40s from 2013 through 2014; the rate for women in their late 40s was unchanged.
- The **mean age of mother at first birth** rose again in 2014 to 26.3, up from 26.0 in 2013.
- The **birth rate for unmarried women** fell for the sixth consecutive year, to 43.9 per 1,000 unmarried women aged 15–44 in 2014. The number of nonmarital births increased 1% from 2013 to 1,604,870 births in 2014. The percentage of births to unmarried women was down 1%, to 40.2% in 2014.
- The cesarean delivery rate declined for the second straight year to 32.2% of all U.S. births in 2014. Declines in cesarean deliveries were seen for each of the largest race and Hispanic origin groups from 2013 through 2014.
- The preterm birth rate (less than 37 weeks) was 9.57% in 2014, down slightly from 2013 and down 8% from 2007. The preterm rate among singleton births has declined 10% since 2007.
- The 2014 rate of low birthweight (less than 2,500 grams) was 8.00%, essentially unchanged from 2013, but 3% lower than the 2006 high (8.26%).

• The twin birth rate was 33.9 per 1,000 in 2014, which was not significantly higher than the rate for 2013 (33.7), but was a new high for the nation. The triplet and higher-order multiple birth rate (triplet/+) dropped another 5% in 2014 to 113.5 per 100,000 births and is down by more than 40% since the 1998 high.

#### Introduction

This report presents detailed data on numbers and characteristics of births in 2014, birth and fertility rates, maternal demographic and health characteristics, place and attendant at birth, and infant health characteristics. A report of preliminary birth statistics for 2014 presented data on selected topics based on a substantial sample (99.71%) of 2014 births (1). In addition to the tabulations included in this report, more detailed analysis is possible by using the natality public-use file issued each year. The data file may be downloaded from: http://www.cdc.gov/nchs/ data access/Vitalstatsonline.htm (2). The public-use file does not include geographic detail; a file with this information may be available upon special request (3). Birth data may also be accessed via VitalStats, a data access and analysis tool, that includes birth data for 1990 through 2014, with more than 100 variables, including geographic information by state and for counties with populations of 100,000 or more (4).

# 1989 and 2003 revisions of U.S. Standard Certificate of Live Birth

This report includes 2014 data on items that are collected on both the 1989 revision of the U.S. Standard Certificate of Live Birth (unrevised) and the 2003 revision of the U.S. Standard Certificate of Live Birth (revised). The 2003 revision is described in detail elsewhere (5,6).

Forty-seven states, the District of Columbia (DC), and three territories implemented the revised birth certificate as of January 1, 2014. New Jersey implemented the revised birth certificate in 2014, but after January 1. Two states, Connecticut and Rhode Island, remained on the 1989 standard birth certificate in 2014. The 47 fully revised states and DC represent 96% of all 2014 births.

This report presents information on selected data items comparable between the 1989 and 2003 birth certificate revisions. Information on topics comparable between revisions but not presented in this report (e.g., day of birth, month of birth, and congenital anomalies) can be found in the Internet tables (see List of Internet Tables) and in the public-use micro-data files for each data year (2). Recent reports and data releases present information on items exclusive to the 2003 birth certificate revision and not previously available from the National Center for Health Statistics [e.g., use of infertility therapies, Women, Infants, and Children (WIC) food, source of payment for the delivery, maternal morbidity, and breast-feeding] for years 2009–2013 (2,7–11). These and other items exclusive to the 2003 revision are shown in the User Guide (11). Recent reports also assess the quality of the 2003 revised medical and health birth certificate data (9,10).

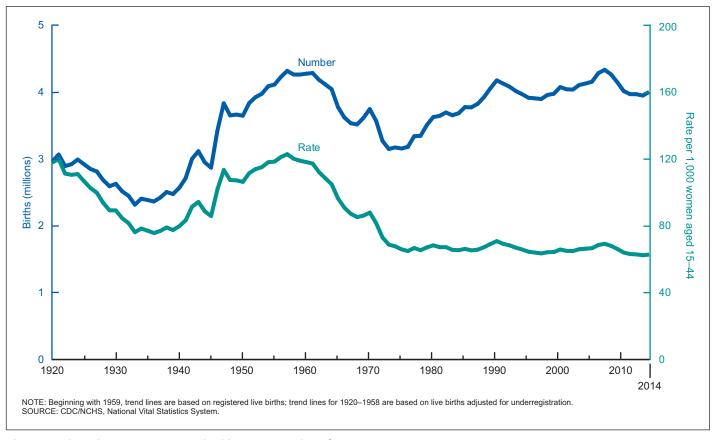

Figure 2. Live births and general fertility rates: United States, 1920–2014

#### **Methods**

Data shown in this report are based on 100% of the birth certificates registered in all states and DC. More than 99% of births occurring in this country are registered (11). Tables showing data by state also provide separate information for Puerto Rico, Virgin Islands, Guam, American Samoa, and Commonwealth of the Northern Marianas. These areas, however, are not included in totals for the United States.

Race and Hispanic origin are reported independently on the birth certificate. In tabulations of birth data by race and Hispanic origin, data for Hispanic persons are not further classified by race because the majority of women of Hispanic origin are reported as white. Most tables in this report show data for the categories of non-Hispanic white, non-Hispanic black, and Hispanic. Data for births are also presented in some tables for American Indian or Alaska Native (AIAN) and Asian or Pacific Islander (API); for specific Hispanic groups Mexican, Puerto Rican, Cuban, and Central and South American; and for other and unknown Hispanic. Data for AIAN and API births are not shown separately by Hispanic origin because the majority of these populations are non-Hispanic. Text references to black births and black mothers or to white births and white mothers are used interchangeably for ease in writing; see Technical Notes.

The 2003 revision of the U.S. Standard Certificate of Live Birth allows the reporting of more than one race (multiple races) for each parent (5) in accordance with the revised standards issued by the Office of Management and Budget (OMB) in 1997 (12). See Technical Notes and the User Guide (11) for detailed information on the 2014 multiple-

race reporting area and methods used to bridge responses for those who report more than one race to a single race.

In this report, the total number of births includes births to women up to age 64. In tables that include age of mother, the oldest age groups shown (40–54, 45–49, 45–54, or 50–54) include births to mothers up to age 64. For information on levels of incomplete reporting by state, see the User Guide (11). For information on the measurement of data items shown in this report and the Internet tables, imputation techniques used, computation of derived statistics, and definitions of terms, see the User Guide (11).

The 2014 population estimates for the specific Hispanic population groups derived from the American Community Survey were not available as of the preparation of this report. Accordingly, birth and fertility rates for these groups are not shown in this report but will be available in forthcoming expanded Tables 5, 7, 8, and 14. For more information on populations for Hispanic groups, see Technical Notes and the User Guide (11).

### **Demographic Characteristics**

#### Births and birth rates

#### Number of births

The number of registered births in the United States for 2014 was 3,988,076, 1% more births than in 2013 (3,932,181) (Tables 1

Table A. Birth rates for women aged 10–19, by age and race and Hispanic origin of mother: United States, 1991, 2007, 2013, and 2014

[Rates per 1,000 women in specified age and race and Hispanic origin group, Population estimated as of July 1]

<sup>†</sup> Difference not statistically significant.

and 5; Figure 2). From 2007 through 2010, the number of births declined steadily, but the pace of decline slowed from 2010 through 2013.

Among the three largest race and Hispanic origin groups, births rose 1% for non-Hispanic white, non-Hispanic black, and Hispanic women from 2013 to 2014. The number of births rose for API women as well, up 6% in 2014, but declined 2% for AIAN women. Among the specified Hispanic groups, births rose 2% for Puerto Rican, 4% for Central and South American, and 7% for Cuban women. The number of births was essentially unchanged for Mexican women in 2014.

#### Fertility rate

The general fertility rate (GFR) for the United States in 2014 was 62.9 births per 1,000 women aged 15–44, up slightly (less than 1%) from 2013 (62.5), which was a record low rate for the nation (Tables 1 and 5; Figure 2). This marks the first increase in the rate since 2007. The fertility rate declined steadily from 2007 through 2013, with the paceofdeclineslowingfrom2010through2013.

The GFR rose 1% for the largest race and Hispanic origin group (non-Hispanic white women) from 2013 to 2014. However, the rate declined 1% for Hispanic women and was essentially unchanged for non-Hispanic black women. The GFR also declined 3% for AIAN women, but rose 3% for API women.

#### Age of mother

Birth rates declined for women aged 15–24 from 2013 to 2014, rose for women aged 25–44, and were unchanged for women aged 10–14 and 45–49.

**Teenagers**—The **teen birth rate** for the United States in 2014 was 24.2 births per 1,000 females aged 15–19, down 9% from 2013 (26.5) and yet another historic low for the nation (Tables A, 3, 4, 7, and 8; Figures 1 and 3) (13–16). The rate has fallen 61% since 1991 (61.8), when the long-term decline in births to teenagers began (13). The number of births to teenagers aged 15–19 was 249,078 in 2014, down 9% from 2013 (273,105) and 52% from 1991 (519,577).

Includes births to race and Hispanic origin groups not shown separately, such as white Hispanic and black Hispanic women, and births with origin not stated.

<sup>&</sup>lt;sup>2</sup>Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget (OMB) standards. Forty-nine states and the District of Columbia reported multiple-race data in 2014. The multiple-race data for these states were bridged to the single-race categories of the 1977 OMB standards for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2007, 2013, and 2014; see Technical Notes.

<sup>&</sup>lt;sup>3</sup>Includes persons of Hispanic and non-Hispanic origin and origin not stated, according to the mother's reported race; see Technical Notes.

<sup>&</sup>lt;sup>4</sup>Includes all persons of Hispanic origin of any race; see Technical Notes.

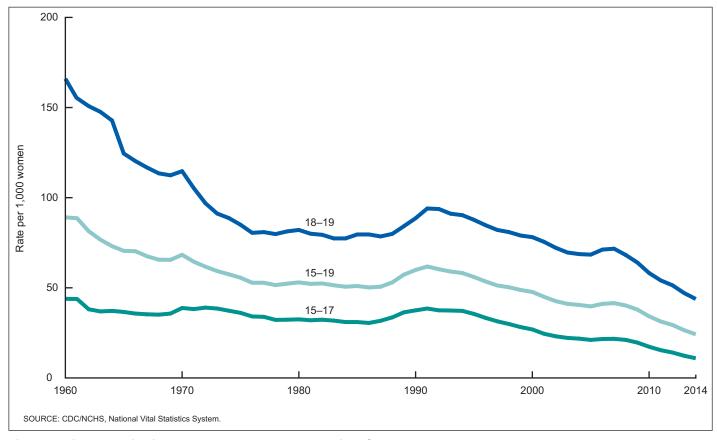

Figure 3. Birth rates for females aged 15-19, by age: United States, 1960-2014

The birth rates for teenagers aged 15–17 and 18–19 in 2014 were 10.9 births per 1,000 for the younger teenagers and 43.8 births per 1,000 for the older teenagers, down 11% and 7%, respectively from 2013, and record lows for both groups. Since 1991, the rates for these two groups have fallen 72% and 53%. The birth rate for teenagers aged 10–14 was essentially unchanged in 2014 at 0.3 births per 1,000 females.

Among race and ethnicity groups, rates for teenagers aged 15–19 declined for all groups from 2013 to 2014, with rates down 7% for non-Hispanic white, 9% for Hispanic, 11% for API and non-Hispanic black, and 12% for AIAN teenagers. Birth rates for teenagers aged 15–17 and 18–19 also declined for all race and ethnicity groups in 2014.

Women in their 20s—The birth rate for women aged 20–24 in 2014 was 79.0 births per 1,000 women, down 2% from 2013 (80.7), and another record low for this age group (Tables 3, 4, 7, 8, and 12). The rate for women in this age group has declined steadily since 2006. The number of births to women in their early 20s declined 2% from 2013 to 2014 (14). The **rate for women aged 25–29** was 105.8 births per 1,000 women, up slightly from 2013 (105.5). The rate for women in this age group declined steadily from 2007 through 2013. The number of births to women in their late 20s increased in 2014, up 2% from 2013 (Tables 2, 4, and 6).

Women in their 30s—The birth rate for women aged 30–34 was 100.8 births per 1,000 women in 2014, up 3% from 2013 (98.0). The number of births to women in this age group increased 4% between 2013 and 2014. The birth rate for women aged 35–39 was 51.0 births per 1,000 women in 2014, up 3% from 2013 (49.3). The number of births to women aged 35–39 increased 5% in 2014 (Tables 2, 4, and 6) (14).

Women in their 40s—The birth rate for women aged 40–44 was 10.6 births per 1,000 women in 2014, up 2% from 2013 (10.4) (Tables 4 and 8). The rate for women in this age group generally has risen over the last three decades (Figure 4). The number of births to women in their early 40s was essentially unchanged from 2013 to 2014. The birth rate for women aged 45–49 (which includes births to women aged 50 and over) was 0.8 births per 1,000 women in 2014, unchanged from 2013. The number of births to women aged 45–49 rose 3% from 2013 to 2014.

Women aged 50 and over—There were 743 births to women aged 50 and over in 2014, up from 677 in 2013 (Tables 2 and 6) (14). The number of births to women in this age group has generally increased since 1997 (144), when data for women aged 50 and over became available again. The birth rate for women aged 50–54 was 0.6 births per 10,000 women in 2014, unchanged from 2013 (data not shown). Because of the small number of births to women in this age group, the birth rate for women aged 50–54 is expressed per 10,000 women. For rates shown elsewhere in this report, births to women aged 50 and over are included with births to women aged 45–49 when computing birth rates by age of mother (the denominator for the rate is women aged 45–49).

#### Live-birth order

The first-birth rate for the United States was 24.6 births per 1,000 women aged 15–44 in 2014, down slightly (less than 1%) from 2013 (24.7) (Tables 3, 7, and 9). First-birth rates declined for women in their teens and early 20s (down 8% for women aged 15–19 and

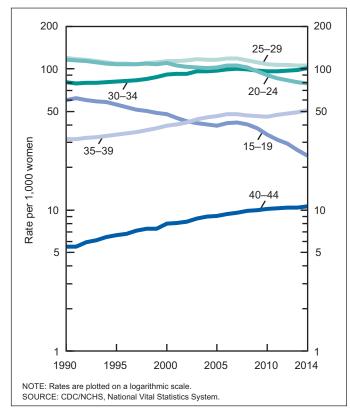

Figure 4. Birth rates, by age of mother: United States, 1990–2014

2% for women aged 20-24), rose for women in their 30s (up 4% for women aged 30-34 and 35-39), and were unchanged for women aged 25-29 and 40 and over.

Another useful measure for interpreting childbearing patterns is the **mean age at first birth**, which is the arithmetic average of the age of mothers at the time of birth, and is computed directly from the frequency of first births by age of mother. The mean age of mothers giving birth in 2014 was 26.3, up from 26.0 in 2013, yet another record high for the nation (Tables 13, 14, and I-1) (16,17,18). The increase in the mean age in 2014 reflects, in part, the decline in first births to women in their teens and early 20s and the rise in first births to women in their 30s.

In 2014, mean age at first birth varied by race and Hispanic origin, from 23.1 for AIAN women to 29.5 for API women. The average ages at first birth for the three largest race and Hispanic origin groups were 24.2 for non-Hispanic black, 24.3 for Hispanic, and 27.0 for non-Hispanic white women (Tables 13 and 14). Among the specified Hispanic groups, average ages ranged from 23.7 for Mexican women to 27.0 for Cuban women. Average age at first birth increased for women in nearly all race and Hispanic origin groups from 2013 to 2014, with the exception of Central and South American women for whom the average age was essentially unchanged.

### Total fertility rate

The total fertility rate (TFR) for the United States in 2014 was 1,862.5 births per 1,000 women, up slightly (less than 1%) from 2013 (1,857.5) (Tables 4, 8, 13, and 14). The TFR estimates the number of births that a hypothetical group of 1,000 women would have over

their lifetimes, based on age-specific birth rates in a given year. Because it is computed from age-specific birth rates, the TFR is age-adjusted, and can be compared for populations across time, population groups, and geographic areas. From 2007 through 2013, the TFR declined each year. The TFR increased 1% for non-Hispanic white and 2% for API women, but decreased for non-Hispanic black, Hispanic, and AIAN women, by less than 1%, 1%, and 3%, respectively.

In 2014, the U.S. TFR was again below "replacement," the level at which a given generation can exactly replace itself (generally considered to be 2,100 births per 1,000 women). The TFR has generally been below replacement since 1971 (16). With the exception of Hispanic women, the rates for all other groups were below replacement (Tables 8 and 14).

#### Births and birth rates by state

From 2013 to 2014, the number of births rose in 25 states (Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Louisiana, Maryland, Minnesota, Nebraska, Nevada, New York, North Carolina, North Dakota, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, and Washington); declined in 2 states (Hawaii and West Virginia); and was essentially unchanged in the remaining 23 states and DC. Among U.S. territories, the number of births declined in Puerto Rico and Northern Marianas, and was essentially unchanged in Guam and American Samoa (Tables 10 and 11).

The GFR rose 1%–5% in 17 states (Alabama, Arkansas, California, Florida, Georgia, Illinois, Indiana, Louisiana, Maryland, Michigan, Nebraska, North Carolina, North Dakota, Pennsylvania, Tennessee, Texas, and Washington); declined in 2 states (Hawaii and West Virginia); and was essentially unchanged in the 31 remaining states and DC from 2013 through 2014. Rates among the states ranged from 50.5 births per 1,000 women aged 15–44 in New Hampshire, to 80.0 in Utah (Table 12). The fertility rate declined in Puerto Rico and Northern Marianas, and was essentially unchanged in Guam and American Samoa.

The TFR rose 1%–4% in 8 states (Alabama, Arkansas, Illinois, Louisiana, Maryland, Nebraska, North Dakota, and Texas) in 2014; declined in 3 states (Hawaii, Massachusetts, and West Virginia); and was essentially unchanged in the remaining 39 states and DC. TFRs ranged from 1,517.0 births per 1,000 women in DC to 2,328.5 in Utah (Table 12). The TFR declined for Puerto Rico and Northern Marianas and was essentially unchanged in Guam and American Samoa.

### Birth rates for teenagers by state

The birth rate for teenagers aged 15–19 declined in 43 states and DC from 2013 to 2014, with declines ranging from 5% for Tennessee to 16% for Delaware, and was essentially unchanged in the remaining 7 states (Alaska, Hawaii, Montana, Maine, Vermont, North Dakota, and Wyoming). Rates among the states ranged from 10.6 births per 1,000 teenagers aged 15–19 in Massachusetts, to 39.5 in Arkansas (Table 12). The teen birth rate declined for Puerto Rico and was essentially unchanged for Guam, American Samoa, and Northern Marianas. The wide range in state-specific teen rates is consistent with patterns observed in previous analyses (15.19).

Table B. Births and birth rates for unmarried and married women: United States, 1980, 1985, 1990, 1995, and 2000–2014

	Births to	unmarried	women	Birth rate for married

<sup>&</sup>lt;sup>1</sup>Births to unmarried women per 1,000 unmarried women aged 15-44.

NOTE: Rates for 2001–2009 have been revised, using revised intercensal population estimates based on the 2010 census.

#### Births to unmarried women

The birth rate for unmarried women declined for the sixth consecutive year in 2014, to 43.9 per 1,000 unmarried women aged 15–44 (Tables B, 15, and 16). The 2014 nonmarital birth rate was 1% lower than in 2013 (44.3) and 15% lower than the peak of 51.8 in 2007 and 2008 (Tables B, 15, and 16).

In contrast to trends among unmarried women, the birth rate for married women, which had declined 5% for 2007–2010, increased 2% for 2013–2014, and is up 5% since 2010 (from 84.3 per 1,000 married women aged 15–44 to 88.9) (Table B).

The percentage of all births to unmarried women was 40.2% in 2014, down from 40.6% in 2013, the lowest level since 2007 (Table B). This percentage peaked in 2009 at 41.0%. In 2014, the percentage of nonmarital births varied widely among population groups, from 16.4% for API mothers to 70.9% for non-Hispanic black mothers (Table 15).

The number of nonmarital births increased 1% between 2013 (1,595,873) and 2014 (1,604,870). The number had risen steadily every year from 2000 to 2008 when it peaked at 1,726,566. The number declined from 2008 to 2011 and has since fluctuated.

The steepest decline in nonmarital birth rates between 2013 and 2014 was for younger teenagers aged 15–17, falling 11% from 11.9 per 1,000 to 10.6 (Table 16). Nonmarital birth rates also declined for older teenagers (aged 18–19) and for women aged 20–24. Nonmarital birth rates increased for women in all age groups 25 and over, reaching a historic peak for women aged 30–34 (from 31.8 in 2013 to 33.4 in 2014). Compositional differences by race and Hispanic origin among states are a major contributing factor to the geographic variation in the percentage of births to unmarried mothers (Table I–4). The percentages

ranged from less than one in five births in Utah (18.6%) to about one-half of births in DC, Louisiana, Mississippi, and New Mexico.

#### Age of father

The **fertility rate of men** for the United States in 2014 was 46.3 births per 1,000 men aged 15–54, up 1% from 2013 (45.8) (Table 17). Similar to fertility rates among women, rates declined for all men under age 30 (down 8% for men aged 15–19, 3% for men aged 20–24, and 1% for men aged 25–29) and rose for men aged 30 and over (up 2%–3% for men aged 30–34, 35–39, and 40–44; up 6% for those aged 45–49 and 4% for men aged 50–54). Rates for men aged 15–19 (11.3), 20–24 (53.9), and 25–29 (89.7) were at record lows in 2014, whereas the rates for men aged 35–39 (68.8), 40–44 (27.9), and 45–49 (9.3) were the lowest in more than 40 years (16).

Birth rates rose 1% for white men from 2013 to 2014, to 44.4 births per 1,000 men aged 15–54, and declined less than 1% for black men, to 57.8. Rates declined for white and black men under 30, rose for white men aged 30–54 and black men aged 30–49 and 55 and over, and were unchanged for the remaining groups. Information on age of father is often missing on birth certificates of children born to women under age 25 and to unmarried women. In 2014, age of father was not reported for 12% of all births, 32% of births to all women under age 20, and 29% of all nonmarital births. The procedures for computing birth rates by age of father that account for the missing data are described in the User Guide (11).

#### **Medical Services Utilization**

#### Attendant at birth and place of delivery

In 2014, 98.5% of all births in the United States were in hospitals. Doctors of medicine attended 84.8% of all hospital births, certified nurse midwives 8.0%, and doctors of osteopathy 6.6% (Tables 18–20).

Out-of-hospital deliveries represented 1.5% of births in 2014. Of the more than 59,000 out-of-hospital births in the United States in 2014, 63.8% occurred in a residence (home), and 30.5% in a freestanding birthing center (Table 20). The number of births occurring at home, 38,094, was the highest since reporting began for this item in 1989 (20). Oregon and Vermont had the highest percentages of home births (2.5%) in 2014, with five other states at just over 2.0% (Table I–12). Six states and DC reported that less than one-half of a percent of their births occurred at home.

### Method of delivery

The cesarean delivery rate declined for the second year in a row to 32.2% of U.S. births in 2014, which was 2% lower than the rate in 2013 (32.7%) and the lowest rate since 2007 (Tables 18, 19, and 21). The rate peaked in 2009 at 32.9% after increasing every year since 1996 (20.7%), followed by slight declines in 2010 and 2013.

In 2014, cesarean delivery rates declined for all maternal age groups (Table 22). The largest change was among women under 20 (down 4% from 21.8% to 21.0%). Cesarean delivery continues to

<sup>&</sup>lt;sup>2</sup>Percentage of all births to unmarried women.

<sup>&</sup>lt;sup>3</sup>Births to married women per 1,000 married women aged 15-44.

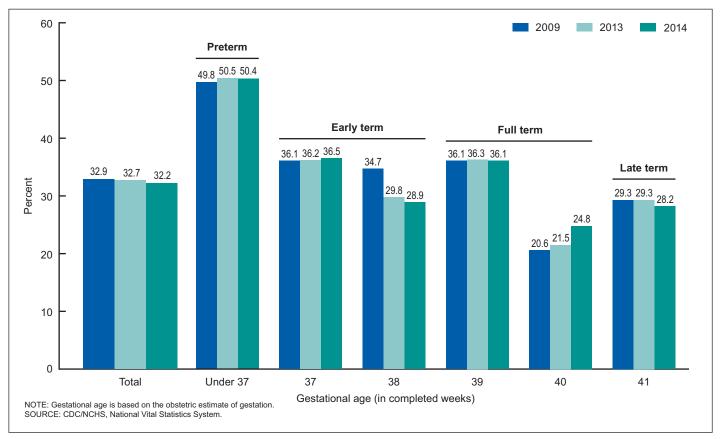

Figure 5. Cesarean delivery, by gestational age: 2009, 2013, and 2014

increase with advancing maternal age; women aged 40 and over were more than twice as likely to deliver by cesarean as were women under 20.

Cesarean delivery rates declined for each of the three largest race and Hispanic origin groups in 2014 (Tables 18, 19, and 21). The rate declined for non-Hispanic white women for the fifth consecutive year, down 2% from 32.0% in 2013 to 31.4% in 2014 and 4% from the 2009 peak. Rates declined 1% for both non-Hispanic black (from 35.8% to 35.6%) and Hispanic women (32.3% to 31.9%). For the second year in a row, non-Hispanic white women had the lowest cesarean delivery rate; non-Hispanic black women continued to have the highest rate.

Cesarean delivery rates declined from 2013 to 2014 for 21 states and DC (Table I-7). The largest declines were reported for Arkansas (7%), DC (4%), and Kentucky (4%). Rates increased for Arizona (2%) and Montana (6%), and were unchanged for 28 states.

In recent years, efforts within the obstetrics community have focused on reducing non-medically indicated cesarean delivery and induction of labor before 39 weeks (21–24). Since 2009, cesarean delivery rates for births under 39 weeks of gestation (based on the obstetric estimate) have declined, driven largely by changes at 38 weeks (Figure 5). From 2013 to 2014, the cesarean delivery rate declined among births at 39 weeks for the first year since 2009.

The low-risk cesarean delivery rate—that is, cesarean delivery among nulliparous (first birth), term (37 completed weeks or more based on the obstetric estimate), singleton (one fetus), vertex (head first) births—showed patterns similar to the overall cesarean rate (Table C). The low-risk cesarean rate decreased from 26.8% to 26.0%

from 2013 to 2014. Declines by maternal age, race and Hispanic origin, and gestational age were more pronounced among low-risk births than among all births. A recent report examines the changes in low-risk cesarean delivery from 2009 through 2013 (25).

Information for 2014 on primary cesarean and vaginal birth after cesarean delivery for the revised reporting area (47 states and DC) is presented in the User Guide (11). A recent report examined trends in primary cesarean delivery rates by state and for limited reporting areas through 2012 (26).

Use of forceps and vacuum extraction continued to decline in 2014 (Table D). Use of either method of instrumental delivery decreased from 3.30% in 2013 to 3.21% in 2014 (down from 9.01% in 1990). Use of forceps remains the rarer method, declining from 0.59% to 0.57% of all births for 2013–2014, compared with vacuum extraction, down from 2.72% to 2.64%. Among vaginal births, use of either method fell by 3% in 2014 (4.91% to 4.74%).

### Infant Health Characteristics

#### Period of gestation

The 2014 **preterm birth rate** was 9.57%, down less than 1% from 2013 (9.62%) and 8% from the 2007 peak (10.44%); see Tables E, 18, 19, and 23–25. [National gestational age data based on the obstetric estimate of gestation are available only from 2007 (27); see Technical Notes.] The early preterm birth rate (less than 34 weeks) declined to 2.75% in 2014 from 2.79% in 2013 (27); the

Table C. Low-risk cesarean delivery, by age of mother, race and Hispanic origin of mother, and gestational age: United States, 2013 and 2014

Characteristic	2014	2013	Percent change 2013 and 2014

<sup>\*</sup> Difference is not significantly different at p = 0.05.

NOTE: Low risk cesarean is defined as singleton, term (37 or more weeks of gestation based on the obstetric estimate), vertex (not breech) cesarean deliveries to women having a first birth per 100 women delivering singleton, term, vertex first births.

late preterm birth rate (34–36 weeks) was essentially stable at 6.82%. The percentage of newborns delivered late preterm has declined 9% since 2007 (Table E).

Recent years have also witnessed a shift in early-term (37–38 weeks) and full-term (39–40 weeks) deliveries. From 2007 to 2014, early-term births declined 16% (from 29.46% to 24.76%) and the percentage of full-term births rose 11% (from 53.02% to 58.72%). Reductions in late-preterm and early-term deliveries from 2007 to 2014 may be related to heightened understanding of the increased neonatal risk at these gestational ages compared with at full term, and with subsequent recommendations and efforts to reduce non-medically indicated deliveries before 39 weeks (28–31).

Analyzing births in singleton deliveries separately is important because of the shorter average gestations of multiple births and their accordant influence on overall gestational age measures (see "Multiple births"). The preterm birth rate for singleton only births was 7.74% in 2014 (Table F), down 1% from 2013 (7.80%) and 10% from 2007 (8.59%).

Preterm birth rates were essentially unchanged for each of the largest race and Hispanic origin groups between 2013 and 2014 (Table 24). However, rates have declined for each group since 2007, down 10% for non-Hispanic white (from 9.90% to 8.91%) and non-Hispanic black (14.71% to 13.23%) infants, and 3% for Hispanic infants (9.35% to 9.03%).

Table D. Live births delivered by forceps or vacuum extraction: United States, 1990, 1995, 2000, 2005, 2010, and 2012–2014

Year	Forceps	Vacuum extraction	Forceps or vacuum
		Percent	
2014	0.57	2.64	3.21
2013	0.59	2.72	3.30
2012	0.61	2.79	3.40
2010	0.66	2.96	3.62
2005	0.93	3.87	4.80
2000	2.07	4.85	6.92
1995	3.48	5.90	9.38
1990 <sup>1</sup>	5.11	3.90	9.01

<sup>&</sup>lt;sup>1</sup>Excludes data for Oklahoma, which did not require reporting of method of delivery.

Reductions in preterm birth rates were reported across much of the United States from 2007 through 2014. Rates declined in 38 states and DC; 26 states had declines in preterm rates of 10% or more. Non-statistically significant changes were found for 11 states (Alaska, Hawaii, Missouri, Montana, Nebraska, New Hampshire, Oklahoma, Utah, Oregon, Vermont, and Wyoming). The preterm rate increased in Wisconsin (Figure 6 and Table I–8).

#### **Birthweight**

The percentage of infants born **low birthweight** (LBW) was essentially unchanged in 2014 at 8.00%, compared with 8.02% for 2013. Following increases of nearly 20% from 1990 to 2006, the LBW rate (less than 2,500 grams or 5 pounds, 8 ounces) has trended slightly downward for a total decline of 3% (Tables 18, 19, and 23–25). The 2014 very low birthweight rate (less than 1,500 grams) was also stable at 1.40%, but is down from the high of 1.49% reported for 2005–2007. The percentage of moderately low birthweight infants (1,500–2,499 grams) was 6.60% in 2014, unchanged from 2013, but lower than the 2006 peak of 6.77% (Table 24). Weight at birth is closely associated with gestational age and can be an important and independent predictor of short- and long-term outcomes (32–34).

As the gestational age distribution has shifted toward longer pregnancies from the mid-2000s (see "Gestational age"), the birthweight distribution has also moved toward heavier infants, albeit to a lesser degree. In addition to the modest reduction in LBW noted earlier, the percentage of births at 2,500–2,999 grams (5 pounds, 9 ounces to 6 pounds, 9 ounces) has declined from 18.44% to 18.27% from 2006 to 2014, while the percentage of infants weighing 3,000 grams or greater has increased from 73.30% to 73.73%.

LBW levels were essentially stable among births to each of the largest race and Hispanic origin groups for 2014: non-Hispanic white (6.96% in 2014), non-Hispanic black (13.15%), and Hispanic (7.05%) births (Table 24). From 1990 through 2006, LBW rates rose among each group; since 2006, however, rates have declined among non-Hispanic white (5%) and non-Hispanic black (6%) infants. Among Hispanics, rates have fluctuated fairly narrowly. See Tables I–9 and I–10 for 2014 state-specific very low birthweight and low birthweight rates by race and Hispanic origin.

Births in singleton deliveries are often examined separately because multiple births tend to be born smaller than singletons, and

<sup>&</sup>lt;sup>1</sup>41 completed weeks based on the obstetric estimate.

<sup>&</sup>lt;sup>2</sup>42 completed weeks or more based on the obstetric estimate.

Table E. Distribution of births, by selected gestational age categories: United States, 2007–2014

			Pre	eterm			Early term	Full term	Late term	Postterm	
Year	Births	Total under 37 weeks	27 weeks and under	28–31 weeks	32–33 weeks	34–36 weeks	37–38 weeks	39–40 weeks	41 weeks	42 weeks or more	Not stated

<sup>&</sup>lt;sup>1</sup>Quintuplets, sextuplets, and higher-order multiple births are not differentiated in the national data set.

changes in multiple birth incidence can influence overall low birthweight levels; see Table F and the section on "Multiple births." For 2014, the singleton LBW rate was stable at 6.24%. This percentage rose 10% from 1990 (5.90%) to 2006 (6.49%), but has declined 4% from the 2006 high.

#### **Multiple births**

The 2014 **twin birth rate** was 33.9 twins per 1,000 births, essentially unchanged from 2013 (33.7), but a new high for the nation. The twinning rate (births in twin deliveries per 1,000 total births) rose 76% from 1980 to 2009 (from 18.9 to 33.2 per 1,000), was generally stable from 2009 through 2012, and rose 2% between 2012 and 2013 (Tables 26 and 27).

The **triplet and higher-order multiple birth rate** (triplet/+) declined 5% from 2013 to 2014, from 119.5 to 113.5 per 100,000 births. The 2014 triplet/+ birth rate is the lowest in 20 years and is down more than 40% from the 1998 peak (193.5). The triplet/+ birth rate (number of triplets, quadruplets, and quintuplets and other higher-order multiples per 100,000 births) rose more than 400% from 1980 to 1998 (Tables 26 and 27), but has trended downward since, with average annual declines of more than 4% reported since 2004.

There were 135,336 infants born in twin deliveries in 2014, an increase over 2013, but lower than the number of twins reported during the peak years of 2006–2009 (Table 27). The 4,526 births in triplet/+

deliveries in 2014 was the lowest number reported since 1993, and included 4,233 triplets, 246 quadruplets, and 47 quintuplets and higher-order multiple births (Table F).

The rise in multiple birth rates has been associated with expanded use of fertility therapies [ovulation-inducing drugs and assisted reproductive technologies (ART)] and older maternal age at childbearing (35,36). An estimated 1.5% of 2012 births were the result of ART therapies alone (37). Recent declines in triplet/+ birth rates have been linked to changes in ART procedures (37,38).

Infants born in twin and triplet/+ deliveries are at higher risk of adverse birth outcomes compared with singletons. In 2014, similar to earlier years, more than 1 of every 2 twins and more than 9 of every 10 triplets were born preterm or low birthweight (Table F).

Twinning rates were essentially unchanged from 2013 to 2014 among non-Hispanic white (36.7 per 1,000 in 2014) and Hispanic women (24.1), but rose 4% among non-Hispanic black women (from 38.3 to 40.0). From 1990 to 2009, twin birth rates increased among each group; 62% for non-Hispanic white, 42% for non-Hispanic black, and 25% for Hispanic women. Since 2009, however, rates have fluctuated modestly among non-Hispanic white women and trended upward for Hispanic women. Among non-Hispanic black mothers, rates fluctuated from 2009 through 2012, but have risen 8% for 2012–2014. (Table 27).

<sup>&</sup>lt;sup>2</sup>Under 32 completed weeks of gestation.

<sup>&</sup>lt;sup>3</sup>Under 37 completed weeks of gestation.

<sup>&</sup>lt;sup>4</sup>Less than 1,500 grams.

<sup>&</sup>lt;sup>5</sup>Less than 2,500 grams.

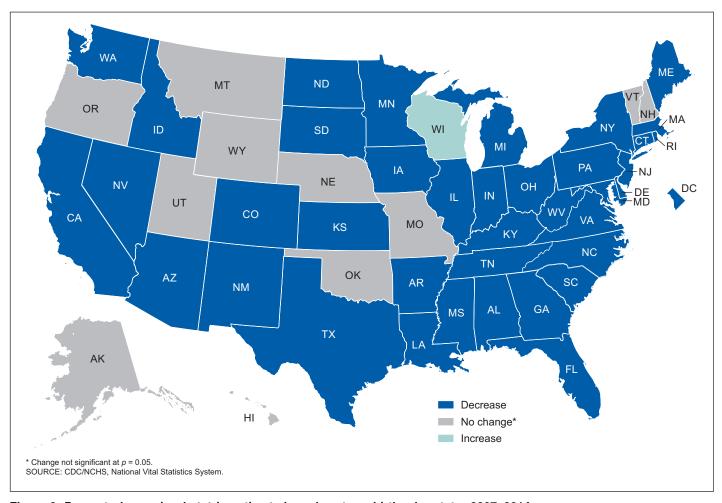

Figure 6. Percent change in obstetric estimate-based preterm births, by state: 2007-2014

The rate of triplet/+ births among non-Hispanic white women was 140.9 per 100,000 in 2014, which was not significantly different from 2013 (147.2), but was down 46% from 1998 (262.8). The triplet/+ rate declined among non-Hispanic black women from 106.7 to 89.7 from 2013 through 2014; the change in the rate for Hispanic women (71.4 to 64.3) was not statistically significant (Table 27). Since 1998, rates have fluctuated for both non-Hispanic black and Hispanic women, but have been essentially unchanged for non-Hispanic black women (from 87.3), and are down overall for Hispanic women (75.3 in 1998).

Twin and triplet/+ birth rates differ across the United States; see Table I-11 for state-specific rates for combined years 2012-2014.

#### **List of Detailed Tables**

1.	Births and birth rates, by race: United States, specified years	45
2.	1940–1955 and each year 1960–2014	15
3.	United States, 2014	17
	mother: United States, 2014	18
	Birth rates, by age of mother: United States, 1970–2014, and by age and race of mother: United States, 1980–2014	19
5.	Births and birth rates, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2014	23
6.	Births, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin:	
7.	United States, 2014	25 27
8.	United States, 2014	
9.	mothers of non-Hispanic origin: United States, 1989–2014 Birth rates, by live-birth order and race and Hispanic origin of mother: United States, 1980–2014	28 33
10.	Births, by race of mother: United States, each state and territory,	
11.	2014	35
12.	2014 Birth rates, by age of mother: United States, each state and	36
	territory, 2014	38
	mother: United States, 2014	39
14.	Selected demographic characteristics of births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin:	
15	United States, 2014	40
	Births and birth rates for unmarried women, by age and race and Hispanic origin of mother: United States, 2014	41
16.	Birth rates for unmarried women, by age of mother: United States, 1970, 1975, and 1980–2014, and by age and race and	
17	Hispanic origin of mother: United States, 1980–2014 Birth rates, by age and race of father: United States,	42
	1980–2014	46
18.	Selected medical and health characteristics of births, by race of mother: United States, 2014	48
19.	Selected medical and health characteristics of births, by Hispanic origin of mother, and by race for mothers of non-	40
20.	Hispanic origin: United States, 2014	49
21	origin of mother: United States, 2014Births, by method of delivery and race and Hispanic origin of	50
	mother: United States, 1989–2014	51
22.	Births, by method of delivery, and by age and race and Hispanic origin of mother: United States, 2014	52
23.	Births, by birthweight and gestational age, and by race and Hispanic origin of mother: United States, 2014	53
24.	Very preterm and preterm births, and very low birthweight and	50
	low birthweight births, by race and Hispanic origin of mother: United States, 1989–2014	55
25.	Preterm and low birthweight births, by age and race and Hispanic origin of mother: United States, 2014	56
26.	Births, by plurality and age and race and Hispanic origin of	
27.	mother: United States, 2014	58

Hispanic origin of mother: United States, 1980–2014 . . . . . . .

#### **List of Internet Tables**

(Available from:

http://www.cdc.gov/nchs/data/nvsr/nvsr64/nvsr64\_12\_tables.pdf)

- I-1. Mean age of mother, by live-birth order and race and Hispanic origin of mother: United States, 1980–2014
- I-2. Births and seasonally adjusted birth rates, by month: United States, 2014
- I-3. Births, by day of week and method of delivery: United States, 2014
- I-4. Births to unmarried women, by race and Hispanic origin of mother: United States, each state and territory, 2014
- I–5. Births, by weight gain of mother during pregnancy, plurality, gestational age, and race and Hispanic origin of mother: United States, 2014
- I-6. Selected risk factors, obstetric procedures, characteristics of labor and delivery, and congenital anomalies, by age and race and Hispanic origin of mother: United States, 2014
- I-7. Total cesarean delivery and low-risk cesarean delivery, by race and Hispanic origin of mother: United States, each state and territory, 2014
- I-8. Preterm births, by race and Hispanic origin of mother: United States, each state and territory, 2014
- I-9. Low birthweight births, by race and Hispanic origin of mother: United States, each state and territory, 2014
- I-10. Very low birthweight births, by race and Hispanic origin of mother: United States, each state and territory, 2014
- I-11. Twin, triplet, and higher-order multiple births, by state: United States and each state, 2012–2014
- I-12. Births occurring at home, by state: United States and each state, 2014

## In the following tables, gestational age data are based on the date of the last normal menses:

- I-13. Births, by birthweight, gestational age (last menstrual period-based), and race and Hispanic origin of mother: United States, 2014
- I-14. Very preterm and preterm births (last menstrual period-based), and very low birthweight and low birthweight births, by race and Hispanic origin of mother: United States, 1989-2014
- I-15. Preterm (last menstrual period-based) and low birthweight births, by age and race and Hispanic origin of mother: United States, 2014
- I-16. Preterm births (last menstrual period-based), by race and Hispanic origin of mother: United States, each state and territory, 2014

Table 1. Births and birth rates, by race: United States, specified years 1940-1955 and each year, 1960-2014

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Beginning with 1970, excludes births to nonresidents of the United States]

Page				Number					Birth	rate				Fertility	/ rate	
Registered births   3,888,076   3,019,883   640,562   44,926   282,723   12,5   12,0   14,5   9,9   14,6   62,9   63,2   64,6   44,8   44,8   62,9   63,2   64,6   44,8   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,9   63,2   64,6   44,8   62,0   63,0	Year		White	Black	Indian or Alaska	Pacific		White	Black	Indian or Alaska	Pacific		White	Black	Indian or Alaska	Asian or Pacific Islander

#### Table 1. Births and birth rates, by race: United States, specified years 1940-1955 and each year, 1960-2014—Con.

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Beginning with 1970, excludes births to nonresidents of the United States]

		Number						Birth	rate			Fertility rate				
Year	All races	White	Black	American Indian or Alaska Native	Asian or Pacific Islander	All races	White	Black	American Indian or Alaska Native	Asian or Pacific Islander	All races	White	Black	American Indian or Alaska Native	Asian or Pacific Islander

<sup>---</sup> Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

<sup>&</sup>lt;sup>1</sup>For 1960–1991, includes births to races not shown separately. For 1992 and later years, unknown race of mother is imputed; see Technical Notes.

<sup>&</sup>lt;sup>2</sup>Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 11.

<sup>&</sup>lt;sup>3</sup>Based on a 50% sample of births.

<sup>&</sup>lt;sup>4</sup>Based on a 20% to 50% sample of births.

<sup>&</sup>lt;sup>5</sup>Figures by race exclude New Jersey.

Table 2. Births, by age of mother, live-birth order, and race of mother: United States, 2014

[Live-birth order refers to number of children born alive to mother]

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

Table 3. Birth rates, by age of mother, live-birth order, and race of mother: United States, 2014

[Rates are births per 1,000 women in specified age and racial group. Fertility rate computed by relating total births, regardless of age of mother, to women aged 15–44. Populations estimated as of July 1. Live-birth order refers to number of children born alive to mother. Figures for live-birth order not stated are distributed]

<sup>0.0</sup> Quantity more than zero but less than 0.05.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

<sup>\*</sup> Figure does not meet standards of reliability or precision; based on fewer than 20 births in numerator.

<sup>&</sup>lt;sup>1</sup>Birth rates computed by relating births to women aged 45 and over to women aged 45–49; see Technical Notes.

Table 4. Birth rates, by age of mother: United States, 1970–2014, and by age and race of mother: United States, 1980–2014

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Birth rates are births per 1,000 women in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years]

Table 4. Birth rates, by age of mother: United States, 1970–2014, and by age and race of mother: United States, 1980–2014—Con.

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Birth rates are births per 1,000 women in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years]

						Age o	of mother				
	Total			15–19							
Year and race	fertility rate	10–14	Total	15–17	18–19	20–24	25–29	30–34	35–39	40–44	45–49

<sup>\*</sup> Figure does not meet standards of reliability or precision; based on fewer than 20 births in numerator.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

<sup>&</sup>lt;sup>1</sup>Beginning in 1997, birth rates are computed by relating births to women aged 45 and over to women aged 45-49; see Technical Notes.

<sup>&</sup>lt;sup>2</sup>For 1970–1991, includes births to races not shown separately. For 1992 and later years, unknown race of mother is imputed; see Technical Notes.

<sup>&</sup>lt;sup>3</sup>Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 11.

<sup>&</sup>lt;sup>4</sup>Based on a 50% sample of births.

Table 5. Births and birth rates, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2014

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey estimates as of July 1 for 2010 to 2014; before 2010, populations for specified Hispanic groups based on Current Population Survey estimates as of April 1 for census years and estimated as of July 1 for all other years]

## Table 5. Births and birth rates, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2014—Con.

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey estimates as of July 1 for 2010 to 2014; before 2010, populations for specified Hispanic groups based on Current Population Survey estimates as of April 1 for census years and estimated as of July 1 for all other years]

				His	spanic				Non-Hispanic

<sup>---</sup> Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes. This table will be updated to include rates for specified Hispanic origin groups when 2014 population data for these groups are available.

<sup>&</sup>lt;sup>1</sup>Includes origin not stated.

<sup>&</sup>lt;sup>2</sup>Includes races other than white and black.

<sup>&</sup>lt;sup>3</sup>Excludes data for New Hampshire, which did not report Hispanic origin.

<sup>&</sup>lt;sup>4</sup>Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

<sup>&</sup>lt;sup>5</sup>Excludes data for Louisiana, New Hampshire, and Oklahoma, which did not report Hispanic origin.

<sup>&</sup>lt;sup>6</sup>Rates for the Central and South American population include other and unknown Hispanic.

Table 6. Births, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2014

[Live-birth order refers to number of children born alive to mother. Includes births with stated origin of mother only]

<sup>-</sup> Quantity zero.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes.

<sup>&</sup>lt;sup>1</sup>Includes races other than white and black.

Table 7. Birth rates, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2014

[Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15–44. Birth rates are births per 1,000 women in specified age and racial group. Populations estimated as of July 1. Live-birth order refers to number of children born alive to mother. Missing values for live-birth order not stated have been distributed]

<sup>\*</sup> Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes. This table will be updated to include rates for specified Hispanic origin groups when 2014 population data for these groups are available.

<sup>0.0</sup> Quantity more than zero but less than 0.05.

<sup>&</sup>lt;sup>1</sup>Fertility rates computed by relating total births, regardless of age of mother, to women aged 15-44.

<sup>&</sup>lt;sup>2</sup>Birth rates computed by relating births to women aged 45 and over to women aged 45-49; see Technical Notes.

<sup>&</sup>lt;sup>3</sup>Includes origin not stated.

<sup>&</sup>lt;sup>4</sup>Includes races other than white and black.

# Table 8. Birth rates, by age and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2014

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Fertility rates are births per 1,000 women aged 15–44 in specified racial group. Birth rates are births per 1,000 women in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey estimates as of July 1 for 2010 to 2014; before 2010, populations for specified Hispanic groups based on Current Population Survey estimates as of April 1 for census years and estimated as of July 1 for all other years]

Table 8. Birth rates, by age and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2014—Con.

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Fertility rates are births per 1,000 women aged 15–44 in specified racial group. Birth rates are births per 1,000 women in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey estimates as of July 1 for 2010 to 2014; before 2010, populations for specified Hispanic groups based on Current Population Survey estimates as of April 1 for census years and estimated as of July 1 for all other years]

Table 8. Birth rates, by age and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2014—Con.

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Fertility rates are births per 1,000 women aged 15–44 in specified racial group. Birth rates are births per 1,000 women in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey estimates as of July 1 for 2010 to 2014; before 2010, populations for specified Hispanic groups based on Current Population Survey estimates as of April 1 for census years and estimated as of July 1 for all other years]

<sup>---</sup> Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes. This table will be updated to include rates for specified Hispanic origin groups when 2014 population data for these groups are available.

<sup>\*</sup> Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator or, for the Hispanic subgroups, a relative standard error for the rate of 23% or more for the American Community Survey-based rates of 2010–2014 or fewer than 50 women for census years and 75,000 women for noncensus years in the denominator for the Current Population Survey-based rates for 1989–2009; see reference 11.

<sup>&</sup>lt;sup>1</sup>Fertility rates computed by relating total births, regardless of age of mother, to women aged 15-44.

<sup>&</sup>lt;sup>2</sup>Beginning in 1997, birth rates computed by relating births to women aged 45 and over to women aged 45-49; see Technical Notes.

<sup>&</sup>lt;sup>3</sup>Excludes data for New Hampshire, which did not report Hispanic origin.

<sup>&</sup>lt;sup>4</sup>Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

<sup>&</sup>lt;sup>5</sup>Excludes data for Louisiana, New Hampshire, and Oklahoma, which did not report Hispanic origin.

<sup>&</sup>lt;sup>6</sup>Includes Central and South American and other and unknown Hispanic.

<sup>&</sup>lt;sup>7</sup>Includes origin not stated.

<sup>&</sup>lt;sup>8</sup>Includes races other than white and black.

Table 9. Birth rates, by live-birth order and race and Hispanic origin of mother: United States, 1980-2014

[Rates are births per 1,000 women aged 15–44. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Figures for live-birth order not stated are distributed]

Table 9. Birth rates, by live-birth order and race and Hispanic origin of mother: United States, 1980–2014—Con.

[Rates are births per 1,000 women aged 15–44. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Figures for live-birth order not stated are distributed]

Year and race and Hispanic	Fertility	Live-birth order									
origin of mother	rate	1	2	3	4	5	6 and 7	8 and over

<sup>&</sup>lt;sup>1</sup>Includes races other than white and black.

<sup>&</sup>lt;sup>2</sup>Includes origin not stated.

<sup>&</sup>lt;sup>3</sup>Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 11.

<sup>&</sup>lt;sup>4</sup>Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes.

<sup>&</sup>lt;sup>5</sup>Excludes data for New Hampshire, which did not report Hispanic origin.

<sup>&</sup>lt;sup>6</sup>Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

<sup>&</sup>lt;sup>7</sup>Includes all persons of Hispanic origin of any race.

<sup>---</sup> Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

Quantity zero.Excludes data for the territories.

Table 11. Births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, each state and territory, 2014

Table 12. Birth rates, by age of mother: United States, each state and territory, 2014

[By place of residence. Fertility rates are births per 1,000 women aged 15-44; total fertility rates are sums of birth rates for 5-year age groups multiplied by 5; birth rates by age are births per 1,000 women in specified age group estimated in each area. Populations estimated as of July 1]

<sup>\*</sup> Figure does not meet standards of reliability or precision; birth rates based on fewer than 20 births.

NOTES: Population data for computing birth rates were provided by the U.S. Census Bureau. Rates by state may differ from rates computed on the basis of other population estimates.

<sup>---</sup> Data not available.

<sup>&</sup>lt;sup>1</sup>Birth rates computed by relating births to women aged 45 and over to women aged 45-49; see Technical Notes.

<sup>&</sup>lt;sup>2</sup>Excludes data for the territories.

#### Table 13. Selected demographic characteristics of births, by race of mother: United States, 2014

[Birth rates are births per 1,000 population. Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15–44. Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Populations estimated as of July 1. Mean age at first birth is the arithmetic average of the age of mothers at the time of birth, computed directly from the frequency of first births by age of mother]

Characteristic	All roops	Mhita	Dlook	American Indian or Alaskan	Asian or Pacific
Characteristic	All races	White	Black	Native	Islander
			Number		
Births	3,988,076	3,019,863	640,562	44,928	282,723

			Mean		
Age of mother at first birth	26.3	26.4	24.2	23.1	29.5

<sup>&</sup>lt;sup>1</sup>Male births per 1,000 female births.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

<sup>&</sup>lt;sup>2</sup>Based on live-birth order.

# Table 14. Selected demographic characteristics of births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2014

[Birth rates are births per 1,000 population. Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15–44. Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Populations estimated as of July 1. Mean age at first birth is the arithmetic average of the age of mothers at the time of birth, computed directly from the frequency of first births by age of mother]

<sup>---</sup> Data not available.

NOTES: For 49 states, the District of Columbia, and New York City marital status is reported in the birth registration process; for New York, mother's marital status is inferred; see reference 11. Rates cannot be computed for unmarried non-Hispanic black women or for American Indian or Alaska Native women because the necessary populations are not available.

<sup>&</sup>lt;sup>1</sup>Includes origin not stated.

<sup>&</sup>lt;sup>2</sup>Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Data for persons of Hispanic origin are included in the data for each race group according to the mother's reported race; see Technical Notes. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes.

<sup>&</sup>lt;sup>3</sup>Includes all persons of Hispanic origin of any race.

<sup>&</sup>lt;sup>4</sup>Birth rates computed by relating total births to unmarried mothers, regardless of age of mother, to unmarried women aged 15-44; see Technical Notes.

<sup>&</sup>lt;sup>5</sup>Birth rates computed by relating births to unmarried women aged 40 and over to unmarried women aged 40-44.

Table 16. Birth rates for unmarried women, by age of mother: United States, 1970, 1975, and 1980–2014, and by age and race and Hispanic origin of mother: United States, 1980–2014

<sup>- - -</sup> Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes. Rates cannot be computed for unmarried non-Hispanic black women or for American Indian or Alaska Native women because the necessary populations are not available.

<sup>&</sup>lt;sup>1</sup>Rates computed by relating total births to unmarried mothers, regardless of age of mother, to unmarried women aged 15-44.

<sup>&</sup>lt;sup>2</sup>Beginning in 1997, birth rates computed by relating births to unmarried women aged 40 and over to unmarried women aged 40-44; see Technical Notes.

<sup>&</sup>lt;sup>3</sup>Includes races other than white, black, and Asian or Pacific Islander.

<sup>&</sup>lt;sup>4</sup>Data for states in which marital status was not reported have been inferred and included with data from the remaining states; see Technical Notes.

<sup>&</sup>lt;sup>5</sup>Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 11.

<sup>&</sup>lt;sup>6</sup>Births to unmarried women are estimated for the United States from data for registration areas in which marital status of mother was reported; see reference 50.

<sup>&</sup>lt;sup>7</sup>Based on a 50% sample of births.

<sup>&</sup>lt;sup>8</sup>Rates based on data for 48 states and the District of Columbia, which reported Hispanic origin on the birth certificate. Rates for age group 35–39 are based on births to unmarried women aged 35–44.

<sup>&</sup>lt;sup>9</sup>Includes all persons of Hispanic origin of any race.

Table 17. Birth rates, by age and race of father: United States, 1980-2014

[Rates are births per 1,000 men in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Missing values for age of father not stated have been distributed]

<sup>&</sup>lt;sup>1</sup>Rates computed by relating total births, regardless of age of father, to men aged 15-54.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes. In this table, all men, including Hispanic men, are classified only according to their race; see Technical Notes. Age of father was not stated for 12% of births in 2014. See reference 11 for information on the calculation of birth rates by age of father.

<sup>&</sup>lt;sup>2</sup>Rates computed by relating births to fathers under 20 to men aged 15-19.

<sup>&</sup>lt;sup>3</sup>Includes races other than white and black.

<sup>&</sup>lt;sup>4</sup>Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 11.

Table 18. Selected medical and health characteristics of births, by race of mother: United States, 2014

		, ,		,	
Characteristic	All races	White	Black	American Indian or Alaska Native	Asian or Pacific Islander
Mother			Per	cent	
Diabetes during pregnancy	6.3	6.0	5.6	9.7	10.3
Weight gain of less than 11 lbs	8.7	8.0	12.9	12.8	6.8
Neight gain of more than 40 lbs	21.6	22.1	21.8	22.6	14.6
nduction of labor	23.2	24.0	22.3	23.5	17.6
CNM delivery <sup>1</sup>	8.3	8.6	7.3	17.3	6.7
Cesarean delivery	32.2	31.5	35.4	28.5	33.2
Infant					
Gestational age:					
Preterm <sup>2</sup>	9.6	8.9	13.0	10.2	8.5
Early preterm <sup>3</sup>	2.7	2.4	4.6	2.7	2.2
Late preterm <sup>4</sup>	6.8	6.5	8.3	7.5	6.3
Birthweight:					
Very low birthweight <sup>5</sup>	1.4	1.1	2.8	1.3	1.2
Low birthweight <sup>6</sup>	8.0	7.0	12.8	7.6	8.1
4,000 grams <sup>7</sup> or more	8.0	9.0	4.7	10.1	4.9
4,000 grains of more	0.0	9.0	4.7	10.1	4.5
Twin birth <sup>8</sup>	33.9	33.2	39.2	25.8	31.4
Triplet or higher-order birth <sup>9</sup>	113.5	119.8	88.4	55.6	112.1

<sup>&</sup>lt;sup>1</sup>Births delivered by certified nurse midwives (CNMs).

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

<sup>&</sup>lt;sup>2</sup>Born before 37 completed weeks of gestation based on the obstetric estimate.

<sup>&</sup>lt;sup>3</sup>Born before 34 completed weeks of gestation based on the obstetric estimate.

<sup>&</sup>lt;sup>4</sup>Born between 34 and 36 completed weeks of gestation based on the obstetric estimate.

 $<sup>^5</sup> Less than 1,500 grams (3 lb. 4 oz.).$ 

<sup>&</sup>lt;sup>6</sup>Less than 2,500 grams (5 lb. 8 oz.).

<sup>&</sup>lt;sup>7</sup>Equivalent to 8 lb. 14 oz.

<sup>&</sup>lt;sup>8</sup>Live births in twin deliveries per 1,000 live births.

<sup>&</sup>lt;sup>9</sup>Live births in triplet and other higher-order multiple deliveries per 100,000 live births.

Table 19. Selected medical and health characteristics of births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2014

						Origin of mother	,			
					Hispanic			N	lon-Hispan	ic

<sup>&</sup>lt;sup>1</sup>Includes origin not stated.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes.

<sup>&</sup>lt;sup>2</sup>Includes races other than white and black.

<sup>&</sup>lt;sup>3</sup>Births delivered by certified nurse midwives (CNMs).

<sup>&</sup>lt;sup>4</sup>Born before 37 completed weeks of gestation based on the obstetric estimate.

<sup>&</sup>lt;sup>5</sup>Born before 34 completed weeks of gestation based on the obstetric estimate.

<sup>&</sup>lt;sup>6</sup>Born between 34 and 36 completed weeks of gestation based on the obstetric estimate.

<sup>&</sup>lt;sup>7</sup>Less than 1,500 grams (3 lb. 4 oz.).

<sup>&</sup>lt;sup>8</sup>Less than 2,500 grams (5 lb. 8 oz.).

<sup>&</sup>lt;sup>9</sup>Equivalent to 8 lb. 14 oz.

<sup>&</sup>lt;sup>10</sup>Live births in twin deliveries per 1,000 live births.

 $<sup>^{11}\</sup>mbox{Live}$  births in triplet and other higher-order multiple deliveries per 100,000 live births.

<sup>-</sup> Quantity zero.

<sup>0.0</sup> Quantity more than zero but less than 0.05.

<sup>&</sup>lt;sup>1</sup>Expressed in completed weeks based on the obstetric estimate of gestation.

<sup>&</sup>lt;sup>2</sup>Equivalents of the gram weights in pounds and ounces are shown in the Technical Notes.

<sup>&</sup>lt;sup>3</sup>Includes races other than white and black and origin not stated.

 $<sup>^4\</sup>mbox{Birthweight of less than 1,500 grams (3 lb. 4 oz.)}.$ 

<sup>&</sup>lt;sup>5</sup>Birthweight of less than 2,500 grams (5 lb. 8 oz.).

<sup>&</sup>lt;sup>6</sup>Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes.

<sup>&</sup>lt;sup>7</sup>Includes all persons of Hispanic origin of any race.

<sup>-</sup> Quantity zero.

<sup>&</sup>lt;sup>1</sup>Less than 37 completed weeks of gestation based on the obstetric estimate.

<sup>&</sup>lt;sup>2</sup>Less than 2,500 grams.

<sup>&</sup>lt;sup>3</sup>Less than 34 completed weeks of gestation based on the obstetric estimate.

<sup>&</sup>lt;sup>4</sup>34–36 completed weeks of gestation.

<sup>&</sup>lt;sup>5</sup>Less than 1,500 grams.

<sup>&</sup>lt;sup>6</sup>1,500-2,499 grams.

<sup>&</sup>lt;sup>7</sup>Includes races other than white and black and origin not stated.

<sup>&</sup>lt;sup>6</sup>Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes.

<sup>&</sup>lt;sup>9</sup>Includes all persons of Hispanic origin of any race.

<sup>&</sup>lt;sup>1</sup>The number of live births in all multiple deliveries per 1,000 live births.

<sup>&</sup>lt;sup>2</sup>The number of live births in twin deliveries per 1,000 live births.

<sup>&</sup>lt;sup>3</sup>The number of live births in triplet and other higher-order deliveries per 100,000 live births.

<sup>&</sup>lt;sup>4</sup>Includes races other than white and black and origin not stated.

<sup>&</sup>lt;sup>5</sup>Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2014 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2014; see Technical Notes.

<sup>&</sup>lt;sup>6</sup>Excludes data for New Hampshire, which did not report Hispanic origin.

<sup>&</sup>lt;sup>7</sup>Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

<sup>&</sup>lt;sup>8</sup>Includes all persons of Hispanic origin of any race.

#### **Technical Notes**

#### **Data source**

Data shown in this report for 2014 are based on 100% of the birth certificates filed in all states and the District of Columbia (DC). The data are provided to the Centers for Disease Control and Prevention's National Center for Health Statistics (NCHS) through the Vital Statistics Cooperative Program (VSCP). Information on the percentage of records with missing information for maternal and infant characteristics included in this report shown by state is available in the "2014 User Guide for the Natality Public Use File" (11). Methodological and measurement information for these characteristics is available in the 2014 User Guide (11).

### 1989 and 2003 revisions of the U.S. Standard Certificate of Live Birth

This report includes 2014 data on items that are collected on both the 1989 revision of the U.S. Standard Certificate of Live Birth (unrevised) and the 2003 revision (revised). The 2003 revision is described in the Introduction to this report and in detail elsewhere (5,6).

#### Age of mother

Age of mother is computed in most cases from the mother's and infant's dates of birth as reported on the birth certificate. The mother's age is directly reported by one territory (American Samoa). From 1964 through 1996, mother's age was edited for a range of 10-49. Births reported as occurring to mothers under age 10 or over age 49 are assigned the average age of mothers based on a previous year with the same race, Hispanic origin, and total birth order (total of live births and fetal deaths). Beginning in 1997, age of mother was imputed for ages 9 and under and 55 and over. This procedure was used through 2006 for births in states using the 1989 certificate. Beginning in 2003, for births occurring in revised states, a wider age range has been used-age of mother is imputed for ages 8 and under and 65 and over (mothers aged 9 are recoded as aged 10). Starting in 2007, the same procedures have been used for states using the 1989 certificate. A review and verification of unedited data for several years including 2007 showed that the vast majority of births reported as occurring to women aged 50 and over were to women aged 50-54. In this report, the final age group shown in the tables (45-49, 45-54, or 50-54) includes births to mothers up to age 64.

The numbers of births to women aged 50 and over have been too small historically to compute age-specific birth rates. These births have been included with births to women aged 45–49 for computing birth rates. In 2014, age of mother was not reported on 0.01% of the records (by occurrence); for these records, age of mother was imputed according to the last record with the same race and total birth order.

#### Hispanic origin and race

#### Hispanic origin

Hispanic origin and race are reported separately on the birth certificate. Data are shown in most cases for five specified Hispanic

groups: Mexican, Puerto Rican, Cuban, Central and South American, and other and unknown Hispanic. In tabulations of birth data by race and Hispanic origin, data for persons of Hispanic origin are not further classified by race because the vast majority of births to Hispanic women are reported as white. In tabulations of birth data by race only, data for persons of Hispanic origin are included in the data for each race group according to the mother's reported race. In tabulations that include Hispanic origin, data for non-Hispanic persons are classified according to the race of the mother due to substantial differences in fertility and maternal and infant health characteristics between Hispanic and non-Hispanic white women.

Items asking for the Hispanic origin of the mother and the father have been included on the birth certificates of all states, DC, Virgin Islands, and Guam since 1993, on the birth certificate of Puerto Rico starting in 2005, and on the birth certificate of Northern Marianas starting in 2010 (11). American Samoa does not collect this information.

The Hispanic origin question on the 2003 revision of the birth certificate asks respondents to select only one response. Occasionally, however, more than one Hispanic origin response is given, that is, more than one specified Hispanic group (Mexican, Puerto Rican, Cuban, or Central and South American). From 2003 through 2012, respondents who selected more than one Hispanic origin on the birth certificate were classified as "other Hispanic." Beginning with the 2013 data year, respondents who select more than one Hispanic origin are randomly assigned to a single Hispanic origin. This change was implemented to be consistent with the coding methods of the American Community Survey (ACS) (39), on which the rates for the specified Hispanic groups from 2010 are based (see "Population estimates for the specific Hispanic groups"). [The Current Population Survey, on which the population denominators before 2010 are based, queried respondents who report more than one Hispanic origin to obtain a single origin only (40).]

Change in births to other and unknown Hispanic women—The number of births to "other and unknown Hispanic" women increased by 3% from 137,370 in 2013 to 141,390 in 2014. This number rose each year from 2005 through 2014. Factors that may have influenced this rise are not clear but may include less specificity in respondent reporting of Hispanic origin and increases in the populations of groups included in the "other Hispanic" category. The 47 revised states, DC, and Rhode Island accounted for 96% of Hispanic births in the United States in 2014. For the percentage of records for which Hispanic origin of the parents was not reported in 2014 and additional information on the reporting of Hispanic origin, see the User Guide (11).

#### Single, multiple, and "bridged" race of mother and father

In 1997, the Office of Management and Budget (OMB) issued "Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity," which revised the 1977 "Race and Ethnic Standards for Federal Statistics and Administrative Reporting" (12,41). These documents specify guidelines for collecting, tabulating, and presenting race and ethnicity data within the federal statistical system. The 1997 revised standards incorporated two major changes designed to reflect the changing racial and ethnic profile of the United States. First, the revision increased from four to five the minimum set of categories to be used by federal agencies for identification of race. The 1977 standards required federal agencies to report race-specific tabulations using a minimum set of four

single-race categories: American Indian or Alaska Native (AIAN), Asian or Pacific Islander (API), black, and white. The five categories for race specified in the 1997 standards are: AIAN, Asian, black or African American, Native Hawaiian or Other Pacific Islander (NHOPI), and white. The revised standards called for reporting Asian persons separately from NHOPI persons. Second, the revised standards also require federal data collection programs to allow respondents to select one or more race category.

Beginning with the 2000 decennial census, the U.S. Census Bureau collected race and ethnicity data in accordance with the 1997 revised standards; however, the National Vital Statistics System, which is based on data collected by the states, will not be fully compliant with the new standards until all of the states revise their birth certificates to reflect the new standards. Thus, beginning with the 2000 data year, the numerators (births) for birth rates are incompatible with the denominators (populations); see "Population denominators." To compute rates, it is necessary to "bridge" population data for multiple-race persons to single-race categories. This has been done for birth rates by race presented in this report. Once all states revise their birth registration systems to be compliant with the 1997 OMB standards, the use of bridged populations can be discontinued.

Forty-nine states and DC, which represent 99% of all U.S. resident births, reported multiple-race data in 2014. Multiple-race reporting areas include: the 48 revised or partially revised states (see "The 1989 and 2003 U.S. Standard Certificates of Live Birth"), DC, Guam, and Northern Marianas, which used the 2003 revision of the U.S. Standard Certificate of Live Birth, as well as Rhode Island, which used the 1989 revision of the U.S. Standard Certificate of Live Birth but which collected multiple-race data comparable to data of the states using the revised certificate. Puerto Rico, which revised its birth certificate in 2005, reported race according to the 1989 certificate revision.

Slightly more than 2% of mothers in the states reported more than one race in 2014 (11). Prior to 2014, the multiple-race reporting states varied; 6 states reported more than one race in 2003, 15 states in 2004, 19 states in 2005, 23 states in 2006, 27 states in 2007, 30 states in 2008, 33 states and DC in 2009, 38 states and DC in 2010, 40 states and DC in 2011, 41 states and DC in 2012, and 44 states and DC in 2013.

Data from the vital records of the remaining state, Connecticut, and **two** territories, American Samoa and Virgin Islands, followed the 1977 OMB standards in which only a single race is reported (41). In addition, these areas also reported the minimum set of four races as stipulated in the 1977 standards compared with the minimum of five races for the 1997 standards.

To provide uniformity and comparability of data during the transition period before multiple-race data are available for all reporting areas, bridging the responses of those who reported more than one race to a single race is necessary. The bridging procedure for multiple-race mothers and fathers is based on the procedure used to bridge multiracial population estimates; see "Population denominators" (42). Multiple race is imputed to a single race (AIAN, API, black, or white) according to the combination of races, Hispanic origin, sex, and age of the mother or father indicated on the birth certificate. The imputation procedure is described in detail elsewhere (43,44).

Where race of the mother is not reported, if the race of the father is known, the race of the father is assigned to the mother. When information is not available for either parent, the race of the mother is

imputed according to the specific race of the mother on the preceding record with a known race of mother; see the User Guide (11). In 2014, race of mother was imputed for 5.8% of births (by occurrence of birth).

Trend data by race shown in this report are by race of mother for all years beginning with the 1980 data year. Text references to white births and white mothers or to black births and black mothers are used interchangeably for ease in writing.

For detailed information and discussion on race of mother and father, see the User Guide (11).

# Marital status, attendant and place of birth, pregnancy risk factors, method of delivery, and gestational age

For information and discussion on data quality of marital status, attendant and place of birth, pregnancy risk factors, method of delivery, and gestational age, see the User Guide (11).

#### Gestational age

Beginning with the 2014 data year, NCHS is transitioning to a new standard for estimating the gestational age of the newborn. The new measure—the obstetric estimate of gestation at delivery (OE)—replaces the measure based on the date of the last normal menses (LMP) (27). Accordingly, gestational age data in this report are based on the OE. However, LMP-based data are also available for all relevant report tables (Tables I–13–I–16). National data based on the OE are available only from data year 2007 forward. Gestational age estimates differ somewhat between the OE- and LMP-based measures. For example, the 2014 OE-based preterm birth rate is 9.57% compared with the LMP-based rate of 11.32%.

Of note, both measures show declines in the rate of preterm birth from 2007 to 2014. Information and discussion of the reasons for the change, and a detailed comparison of the two measures, are presented elsewhere (27).

For information and discussion on data quality of attendant and place of birth, pregnancy risk factors, method of delivery, see the User Guide (11).

#### **Birthweight**

Birthweight is reported in some areas in pounds and ounces rather than in grams; however, the metric system has been used in tabulating and presenting the statistics to facilitate comparison with data published by other groups. Equivalents of the gram weights in terms of pounds and ounces are presented below:

Less than 500 grams = 1 lb. 1 oz. or less 500–999 grams = 1 lb. 2 oz.–2 lb. 3 oz. 1,000–1,499 grams = 2 lb. 4 oz.–3 lb. 4 oz. 1,500–1,999 grams = 3 lb. 5 oz.–4 lb. 6 oz. 2,000–2,499 grams = 4 lb. 7 oz.-5 lb. 8 oz. 2,500–2,999 grams = 5 lb. 9 oz.–6 lb. 9 oz. 3,000–3,499 grams = 6 lb. 10 oz.–7 lb. 11 oz. 3,500–3,999 grams = 7 lb. 12 oz.–8 lb. 13 oz. 4,000–4,499 grams = 8 lb. 14 oz.–9 lb. 14 oz. 4,500–4,999 grams = 9 lb. 15 oz.–11 lb. 0 oz. 5,000 grams or more = 11 lb. 1 oz. or more

# Computations of percentages, percent distributions, and means

For information and discussion on computations of percentages, percent distributions, and means, see the User Guide (11).

#### Population denominators

#### 2013 population estimates

The birth and fertility rates for 2014 shown in Tables A, 1, 3–5, 7–9, 12–14, and 17 are based on populations estimated from the 2010 census as of July 1, 2014. These populations are shown in the User Guide (11). The population estimates have been provided by the U.S. Census Bureau (45), and they are based on the 2010 census counts by age, sex, and race, which have been modified for consistency with 1977 OMB race categories and historical categories for birth data. The modification procedures are described in detail elsewhere (42).

The birth and fertility rates by state shown in Table 12 are based on state-level population counts, which are based on the 2010 census provided by the U.S. Census Bureau (42). Birth and fertility rates for the territories except Puerto Rico shown in Table 12 are based on population estimates provided by the U.S. Census Bureau's International Data Base (46). Rates for Puerto Rico are based on population estimates from the 2010 census as of July 1, 2014, and are provided by the U.S. Census Bureau (47).

Rates by state and territory shown in this report may differ from rates computed on the basis of other population estimates; rates for smaller population subgroups, such as those for teen mothers, may be particularly affected by differences in population estimates. Birth and fertility rates by month shown in Table I-2 are based on monthly population estimates for 2014, which are also based on 2010 census estimates. For 2014, rates for unmarried women shown in Tables 15 and 16 are based on distributions of the population by marital status averaged over a 2-year period for 2013-2014. These distributions were reported by the U.S. Census Bureau in the March CPS for each year (48,49), and have been adjusted to July 1, 2014 (2010 census) population levels (45) by NCHS' Division of Vital Statistics (50). As of the preparation of this report, data from the March CPS for 2015 were not available. Accordingly, the distributions of the population by marital status were based on a 2-year average of 2013 and 2014 (48,49). For earlier years, rates for unmarried women are based on distributions of the population by marital status averaged over a 3-year period (50).

#### Population estimates for the specific Hispanic groups

The 2014 population estimates for the specific Hispanic population groups were not available as of the preparation of this report (51). Accordingly, birth and fertility rates for these groups are not shown in this report. Once available, birth and fertility rates for the specific Hispanic population groups will be added to report Tables 5, 7, 8, and 14 of this report. The 2014 special population estimates for Hispanic groups will be shown in the User Guide once available (11). For more information about the populations for Hispanic groups, see references (11,52,53).

#### Revised population estimates

For information on the revised (intercensal) bridged-race population estimates and birth and fertility rates for 2001–2009, see the 2012 User Guide (53).

The population data used to compile birth and fertility rates by race and ethnicity shown in this report are based on special estimation procedures and are not actual counts. This is the case even for the 2000 and 2010 populations that are based on the 2000 and 2010 censuses. As a result, the estimation procedures used to develop these populations may contain some errors. Smaller populations, like AIAN, are likely to be affected much more than larger populations by potential measurement error (42). Although the nature and magnitude of error is unknown, the potential for error should be considered when evaluating trends and differentials. As more accurate information becomes available, further revisions to the estimates may be necessary. For additional information and discussion on the population denominators, see the User Guide (11).

#### Computation of rates

For information and discussion on computations of rates, see the User Guide (11).

#### Random variation and significance testing for natality data

For information and discussion on random variation and significance testing for natality data, see the 2010 User Guide (54).

For information and discussion on random variation and significance testing for birth and fertility rates for Mexican, Puerto Rican, Cuban, Central and South American, and other Hispanic populations based on ACS population estimates, see the User Guide (11).

#### **Definitions of medical terms**

For definitions and discussion of maternal and infant health characteristics, see "Guide to Completing the Facility Worksheets for the Certificate of Live Birth and Report of Fetal Death" (55).

#### Acknowledgments

This report was prepared under the general direction of Delton Atkinson, Director of the Division of Vital Statistics (DVS), and Amy Branum, Chief of the Reproductive Statistics Branch (RSB). Rajesh Virkar, Chief of the Systems, Programming, and Statistical Resources Branch (SPSRB); Steve J. Steimel, Annie S. Liu, and Li Lu provided computer programming support and statistical tables. Sharon Kirmeyer provided statistical tables and content review. Steve J. Steimel and Annie S. Liu of SPSRB prepared the natality file. The Data Acquisition and Evaluation Branch staff of DVS evaluated the quality of and acceptance procedures for the state data files on which this report is based. The Registration Methods staff of DVS consulted with state vital statistics offices regarding the collection of birth certificate data. This report was edited and produced by CDC/OSELS/NCHS/OD/Office of Information Services, Information Design and Publishing Staff: Jen Hurlburt edited the report; typesetting was done by Zung Le and Jacqueline M. Davis; and graphics were produced by Michael W. Jones (contractor).
