National Vital Statistics Reports

Volume 66, Number 1 January 5, 2017

Births: Final Data for 2015

by Joyce A. Martin, M.P.H.; Brady E. Hamilton, Ph.D.; Michelle J.K. Osterman, M.H.S.; Anne K. Driscoll, Ph.D.; and T.J. Mathews, M.S., Division of Vital Statistics

Abstract

Objectives—This report presents 2015 data on U.S. births according to a wide variety of characteristics. Data are presented for maternal age, live-birth order, race and Hispanic origin, marital status, attendant at birth, method of delivery, period of gestation, birthweight, and plurality. Selected data by mother's state of residence and birth rates by age and race of father also are shown. Trends in fertility patterns and maternal and infant characteristics are described and interpreted.

Methods—Descriptive tabulations of data reported on the birth certificates of the 3.98 million births that occurred in 2015 are presented.

Results—In 2015, 3,978,497 births were registered in the United States, down less than 1% from 2014. The general fertility rate was 62.5 per 1,000 women aged 15–44, a decline of 1% from 2014. The birth rate for teenagers aged 15–19 fell 8% in 2015, to 22.3 per 1,000 females. Birth rates declined for women in their 20s but increased for women in their 30s and early 40s. The total fertility rate (estimated number of births over a woman's lifetime)

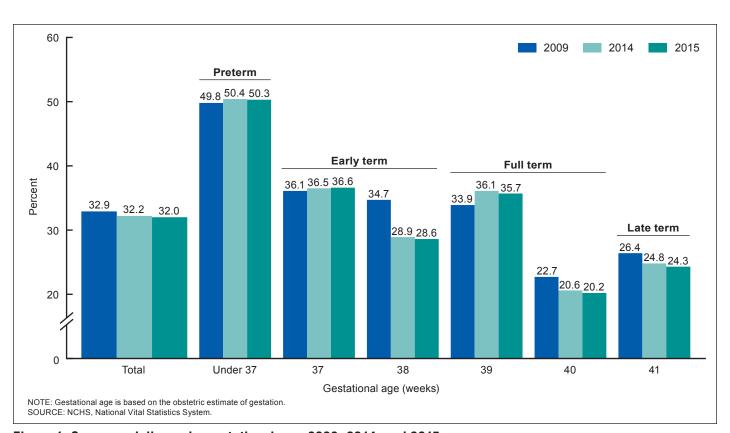

Figure 1. Cesarean delivery, by gestational age: 2009, 2014, and 2015

declined to 1,843.5 births per 1,000 women in 2015. The birth rate for unmarried women declined for the seventh straight year to 43.5 per 1,000. The cesarean delivery rate declined for the third year in a row to 32.0%. The preterm birth rate increased slightly from 2014, to 9.63% in 2015, as did the rate of low birthweight (8.07% in 2015). The twin birth rate declined to 33.5 per 1,000; the triplet and higher-order multiple birth rate was down 9% to 103.6 per 100.000.

Keywords: birth certificate • maternal and infant health • birth rates • maternal characteristics

Highlights

- A total of 3,978,497 births were registered in the United States in 2015, down less than 1% from 2014. The number of births declined for non-Hispanic white and Hispanic women and was essentially unchanged for non-Hispanic black women from 2014 to 2015.
- The general fertility rate declined 1% in 2015, to 62.5 births per 1,000 women aged 15–44 from 62.9 in 2014. The total fertility rate also declined in 2015, to 1,843.5 births per 1,000 women.
- The birth rate for teenagers aged 15–19 declined 8% in 2015, to 22.3 births per 1,000 females aged 15–19, another record low for the nation; rates declined for teenagers in all race and Hispanic-origin groups.
- Birth rates also declined to a record low for women in their early 20s in 2015. Rates declined for women in their late 20s but rose for women in their 30s and early 40s from 2014 to 2015; the rate for women in their late 40s was unchanged.
- The birth rate for unmarried women fell for the seventh consecutive year to 43.4 per 1,000 unmarried women aged 15–44 in 2015. The percentage of births to unmarried women was stable at 40.3%.
- The cesarean delivery rate continued to decline in 2015, to 32.0% of all U.S. births (Figure 1). Declines in cesarean deliveries were seen for all age groups and for non-Hispanic white and Hispanic women.
- The preterm birth rate (less than 37 weeks), which had declined over 2007–2014, increased slightly to 9.63% in 2015 (compared with 9.57% in 2014). Increases in preterm births were seen among non-Hispanic black and Hispanic women.
- A small rise in the percentage of infants born low birthweight (less than 2,500 grams) was also seen from 2014 to 2015, from 8.00% to 8.07%. The low birthweight rate had been trending somewhat downward from the 2006 peak (8.26%).
- The twin birth rate declined in 2015 to 33.5 per 1,000 total births; the 2014 twinning rate (33.9) had been an all-time high. The triplet and higher-order multiple birth rate dropped 9% from 2014 to 2015 and is down 46% since the 1998 peak.

Introduction

This report presents detailed data on numbers and characteristics of births in 2015, birth and fertility rates, maternal demographic and health characteristics, place and attendant at birth, and infant health characteristics. A report of preliminary birth statistics for 2015 presented data on selected topics based on a substantial sample (99.53%) of 2015 births (1); an NCHS Data Brief presented selected characteristics for 2015 births (2). In addition to the tabulations included in this report, more detailed analysis is possible by using the natality public-use file issued each year. The data file may be downloaded from http://www.cdc.gov/nchs/data_access/Vitalstatsonline.htm (3). The public-use file does not include geographic detail; a file with this information may be available upon special request (4). Birth data may also be accessed via the Centers for Disease Control and Prevention's (CDC) "Wide-ranging Online Data for Epidemiologic Research" (WONDER). This Internet system makes CDC's information resources available to public health professionals and the public at large (5).

1989 and 2003 revisions of U.S. Standard Certificate of Live Birth

This report includes 2015 data on items that are collected on both the 1989 revision of the U.S. Standard Certificate of Live Birth (unrevised) and the 2003 revision of the U.S. Standard Certificate of Live Birth (revised). The 2003 revision is described in detail elsewhere (6.7).

Forty-eight states, the District of Columbia (DC), and three territories implemented the revised birth certificate as of January 1, 2015. New Jersey implemented the revised birth certificate in 2014 but had not completed implementation as of January 1, 2015. One state, Connecticut, remained on the 1989 standard birth certificate in 2015. The 48 fully revised states and DC represent 96.5% of all 2015 births.

This report presents information on selected data items comparable between the 1989 and 2003 birth certificate revisions. For sources of information on topics comparable between revisions but not presented in this report (e.g., day of birth, month of birth, and congenital anomalies), see "List of Internet Tables" and the public-use micro-data files for each data year (3). Several recent reports present information on items exclusive to the 2003 birth certificate revision (e.g., time of birth, short interpregnancy intervals, and maternal body mass index) (8–10). A recent report also assessed the quality of the 2003 revised medical and health birth certificate data (11). Additional information on specific data items and data quality is shown in the User Guide (12).

Methods

Data shown in this report are based on 100% of the birth certificates registered in all states and DC. More than 99% of births occurring in this country are registered (12). Tables showing data by state also provide separate information for Puerto Rico, Virgin Islands, Guam, American Samoa, and Commonwealth of

the Northern Marianas. These areas, however, are not included in totals for the United States.

Race and Hispanic origin are reported independently on the birth certificate. In tabulations of birth data by race and Hispanic origin, data for Hispanic persons are not further classified by race because the majority of women of Hispanic origin are reported as white. Most tables in this report show data for the categories of non-Hispanic white, non-Hispanic black, and Hispanic. Data for births are also presented in some tables for American Indian or Alaska Native (AIAN) and Asian or Pacific Islander (API); for the specific Hispanic groups of Mexican, Puerto Rican, Cuban, and Central and South American; and for other and unknown Hispanic. Data for AIAN and API births are not shown separately by Hispanic origin because the majority of these populations are non-Hispanic. Text references to non-Hispanic black births and non-Hispanic black mothers or to non-Hispanic white births and non-Hispanic white mothers are used interchangeably for ease in writing: see Technical Notes.

The 2003 revision of the U.S. Standard Certificate of Live Birth allows the reporting of more than one race (multiple races) for each parent (6) in accordance with the revised standards issued by the Office of Management and Budget (OMB) in 1997 (13). See Technical Notes and the User Guide (12) for detailed information on the 2015 multiple-race reporting area and methods used to bridge responses to a single race for those who report more than one race.

In this report, the total number of births includes births to women up to age 64. In tables that include age of mother, the oldest age groups shown (40–54, 45–49, 45–54, or 50–54) include births to mothers up to age 64 (births to mothers aged 55–64 are recategorized to age group 50–55). For information on levels of incomplete reporting by state, see the User Guide (12). For information on the measurement of data items shown in this report and the Internet tables, imputation techniques used, computation of derived statistics, and definition of terms, see the User Guide (12).

The 2015 population estimates for the specific Hispanic population groups derived from the American Community Survey were not available as of the preparation of this report. Accordingly, birth and fertility rates for these groups are not shown in this report but will be available in forthcoming expanded Tables 5, 7, 8, and 14. For more information on populations for Hispanic groups, see Technical Notes and the User Guide (12).

Demographic Characteristics

Births and birth rates

Number of births

The number of registered **births** in the United States for 2015 was 3,978,497, a decline of less than 1% (or 9,579 births) from the number in 2014 (3,988,076) (Tables 1 and 5; Figure 2). This decline followed an increase in births for 2014, the first increase since 2007. From 2007 through 2013, the number of births declined steadily.

Among the three largest race and Hispanic-origin groups, the number of births for non-Hispanic white women declined 1% from 2014 to 2015, whereas the number of births for Hispanic women rose 1%, and births to non-Hispanic black women were essentially unchanged (14). The number of births declined 1% for AIAN women but was essentially unchanged for API women. Among the specified Hispanic groups, births rose 2% for Puerto Rican, 4% for Central and South American, and 5% for Cuban women. The number of births was essentially unchanged for Mexican women in 2015.

Fertility rate

The **general fertility rate** (GFR) for the United States in 2015 was 62.5 births per 1,000 women aged 15–44, down 1% from 2014 (62.9) and matching the record low rate for the nation in 2013 (Tables 1 and 5; Figure 2). This decline followed an increase in the rate for 2014, the first increase since 2007 (14). From 2007 to 2013, GFR declined steadily.

Among the three largest race and Hispanic-origin groups, the GFR declined less than 1% for non-Hispanic white women and 1% for non-Hispanic black and Hispanic women from 2014 to 2015. GFR also declined 2% for AIAN women and 4% for API women.

Age of mother

Birth rates declined for women under age 30, rose for women aged 30–44, and were unchanged for women aged 45–49 from 2014 to 2015.

Teenagers—The teen birth rate for the United States in 2015 was 22.3 births per 1,000 females aged 15–19, falling 8% below the record low set in 2014 (24.2) (Tables A, B, 3, 4, 7, and 8; Figure 3) (15–17). The rate for this group has declined 46% since 2007 (41.5), the most recent high, and 64% since 1991 (61.8), a long-term high. The number of births to teenagers aged 15–19 was 229,715 in 2015, down 8% from 2014 (249,078) (14). By comparison, the number of births to teenagers was 444,899 in 2007, and 519,577 in 1991 (16).

The birth rates for teenagers aged 15–17 and 18–19 in 2015 were 9.9 births per 1,000 for the younger teenagers and 40.7 births per 1,000 for the older teenagers, down 9% and 7%, respectively, from 2014 and record lows for both groups. Since 2007, the rates for these two groups have fallen 54% and 43%, respectively, and have fallen 74% and 57% since 1991. The birth rate for teenagers aged 10–14 declined in 2015 to 0.2 births per 1,000 females from 0.3 in 2014, the lowest rate for this group on record.

Among race and Hispanic-origin groups, rates for teenagers aged 15–19 declined for all groups from 2014 to 2015, down 6% for AIAN, 8% for both non-Hispanic white and Hispanic, 9% for non-Hispanic black, and 10% for API teenagers. Birth rates for teenagers aged 15–17 and 18–19 also declined for all race and ethnicity groups from 2014 to 2015, except for AIAN females aged 15–17, whose rate was essentially unchanged.

Women in their 20s—The birth rate for women aged 20–24 in 2015 was 76.8 births per 1,000 women, down 3% from 2014 (79.0), reaching yet another record low for this age group

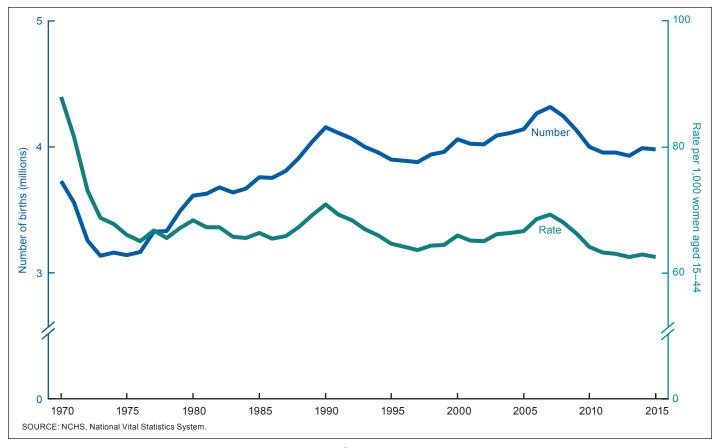

Figure 2. Live births and general fertility rates: United States, 1970–2015

(Tables 3, 4, 7, 8, and 12). The rate for women in this age group has declined steadily since 2006. The number of births to women in their early 20s declined 4% from 2014 to 2015 (14). The rate for women aged 25–29 was 104.3 births per 1,000 women, down 1% from 2014 (105.8). From 2007 through 2013, the rate for women in this age group declined steadily. The number of births to women in their late 20s increased in 2015, up 1% from 2014 (Tables 2, 4, and 6).

Women in their 30s—The birth rate for women aged 30–34 was 101.5 births per 1,000 women in 2015, up 1% from 2014 (100.8) and the highest rate since 1964 (17). The number of births to women in this age group rose 1% from 2014 to 2015. The birth rate for women aged 35–39 was 51.8 births per 1,000 women in 2015, up 2% from 2014 (51.0). The 2015 rate for this group is the highest since 1962 (17). The number of births to women aged 35–39 increased 4% in 2015 (Tables 2, 4, and 6) (14).

Women in their 40s—The birth rate for women aged 40–44 was 11.0 births per 1,000 women in 2015, up 4% from 2014 (10.6) (Tables 4 and 8). The 2015 rate for this group is the highest since 1966 (17). The rate for women in this age group generally has risen over the last 3 decades (Figure 3). The number of births to women in their early 40s increased 2% from 2014 to 2015. The birth rate for women aged 45–49 (which includes births to women aged 50 and over) was 0.8 births per 1,000 women in 2015, unchanged from 2014 and 2013. The number of births to women aged 45 and over rose 6% from 2014 to 2015.

Women aged 50 and over—There were 754 births to women aged 50 and over in 2015 compared with 743 in 2014 (Tables 2 and 6) (14). The number of births to women in this age group has generally increased since 1997 (144), when data for women aged 50 and over became available again. The birth rate for women aged 50–54 was 0.7 births per 10,000 women in 2015, up from 2014 (0.6). Because of the small number of births to women in this age group, the birth rate for women aged 50–54 is expressed per 10,000 women. For rates shown elsewhere in this report, births to women aged 50 and over are included with births to women aged 45–49 when computing birth rates by age of mother (the denominator for the rate is women aged 45–49).

Live-birth order

The first-birth rate for the United States was 24.1 births per 1,000 women aged 15–44 in 2015, down 2% from 2014 (24.6) (Tables 3, 7, and 9). First-birth rates declined for women in their teens (down 8% for women aged 15–19), 20s (2% for women aged 20–24 and 25–29), and early 30s (less than 1% for women aged 30–35). However, rates rose for women in their late 30s and 40s (up 1% for women aged 35–39 and 4% for women aged 40–44). The rate for women aged 45 and over increased from 0.2 in 2014 to 0.3 in 2015.

Another useful measure for interpreting childbearing patterns is the mean age at first birth, which is the arithmetic average of the age of mothers at the time of birth and is computed

Table A. Birth rates for women aged 10–19, by age and race and Hispanic origin of mother: United States, 1991, 2007, 2014, and 2015

[Rates per 1,000 women in specified age and race and Hispanic-origin group. Population estimated as of July 1]

[†] Difference not statistically significant at p = 0.05.

NOTE: Comparisons are made with 2007 and 1991 because these years represent recent and longer-term highs in teenage birth rates.

directly from the frequency of first births by age of mother. The mean age of mothers giving birth in 2015 was 26.4, up from 26.3 in 2014, yet another record high for the nation (Tables 13, 14, and I-1) (17,18). The 2015 increase in the mean age reflects, in part, the decline in first births to women in their teens and early 20s and the rise in first births to women in their late 30s (19).

In 2015, mean age at first birth varied by race and Hispanic origin, from 23.2 for AIAN women to 29.6 for API women. The average ages at first birth for the three largest race and Hispanic-origin groups were 24.4 for non-Hispanic black, 24.5 for Hispanic, and 27.2 for non-Hispanic white women (Tables 13 and 14). Among the specified Hispanic groups, average ages ranged from 24.0 for Mexican women to 27.1 for Cuban women. Average age at first birth increased for women in nearly all race and Hispanic-origin groups from 2014 to 2015, with the exception of AIAN, Central and South American, and Cuban women, for whom the average age was essentially unchanged.

Total fertility rate

The **total fertility rate** (TFR) for the United States in 2015 was 1,843.5 births per 1,000 women, down 1% from 2014 (1,862.5) (Tables 4, 8, 13, and 14). TFR estimates the number of births that a hypothetical group of 1,000 women would have over their lifetimes, based on age-specific birth rates in a given year. Because it is computed from age-specific birth rates, TFR is age-adjusted and can be compared for populations across time, population groups, and geographic areas. From 2007 through 2013, TFR declined each year, but it increased slightly in 2014. TFR decreased for all race and Hispanic-origin groups in 2015, down less than 1% for Hispanic women, 1% for both non-Hispanic white and non-Hispanic black women, 2% for AIAN women, and 4% for API women.

In 2015, the U.S. TFR was again below "replacement," the level at which a given generation can exactly replace itself

¹Excludes data for New Hampshire, which did not report Hispanic origin.

²Includes births to race and Hispanic-origin groups not shown separately, such as white Hispanic and black Hispanic women, and births with origin not stated.

Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with the 1977 Office of Management and Budget (OMB) standards. Forty-nine states and the District of Columbia reported multiple-race data in 2015 that were bridged to the single-race categories of the 1977 OMB standards for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2007, 2014, and 2015; see Technical Notes.

⁴Includes persons of Hispanic and non-Hispanic origin and origin not stated, according to the mother's reported race; see Technical Notes.

⁵Includes all persons of Hispanic origin of any race; see Technical Notes.

Table B. Birth rates for teenagers aged 15–19, by selected race and Hispanic origin of mother: United States and each state, 1991, 2007, and 2015, and percent change in rates: United States, 2007–2015 and 1991–2015

[†] Difference not statistically significant.

NOTES: Comparisons are made with 2007 and 1991 because these years represent recent and longer-term highs in teenage birth rates. Birth rates by state are based on population estimates provided by the U.S. Census Bureau and, therefore, the rates shown here may differ from rates computed on the basis of other population estimates. Rates by race and Hispanic origin cannot be computed for the territories because populations by race and Hispanic origin are not available for these areas.

^{*} Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator.

[‡] Difference not calculable; rate not reliable.

⁻⁻⁻ Data not available; New Hampshire did not report Hispanic origin in 1991.

Includes births to race and Hispanic-origin groups not shown separately, such as white Hispanic and black Hispanic women, and births with origin not stated.

²Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with the 1977 Office of Management and Budget (OMB) standards. Forty-nine states and the District of Columbia reported multiple-race data in 2015 that were bridged to the single-race categories of the 1977 OMB standards for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2007 and 2015.

³Includes all persons of Hispanic origin of any race.

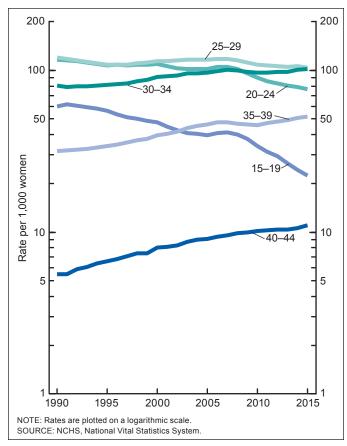

Figure 3. Birth rates, by age of mother: United States, 1990-2015

(generally considered to be 2,100 births per 1,000 women). TFR has generally been below replacement since 1971 (17). With the exception of Hispanic women, the rates for all other groups were below replacement (Tables 8 and 14).

Births and birth rates by state

From 2014 to 2015, the number of births rose in 3 states (Colorado, Florida, and Texas); declined in 8 states (Arizona, California, Connecticut, Michigan, New York, Pennsylvania, Vermont, and West Virginia); and was essentially unchanged in the remaining 39 states and DC. Among U.S. territories, the number of births declined in Puerto Rico and Northern Marianas, and was essentially unchanged in Guam and American Samoa (Tables 10 and 11).

GFR declined (1%–3%) in 8 states (Arizona, California, Massachusetts, North Dakota, Oklahoma, Pennsylvania, Texas, and Utah) and was essentially unchanged in the 42 remaining states and DC from 2014 to 2015. Rates among the states ranged from 51.1 births per 1,000 women aged 15–44 in Vermont to 78.2 in South Dakota (Table 12). GFR declined in Puerto Rico and Northern Marianas, and was essentially unchanged in Guam and American Samoa.

Birth rates for teenagers by state

From 2014 to 2015, the birth rate for teenagers aged 15–19 declined in 37 states, with declines ranging from 4% for Maryland to 18% for Vermont, and was essentially unchanged in the remaining 13 states (Alaska, Arkansas, Idaho, Maine, Montana, Nebraska, Nevada, New Hampshire, North Dakota, Oregon, Rhode Island, South Dakota, and Wyoming) and DC. Rates among the states ranged from 9.4 births per 1,000 teenagers aged 15–19 in Massachusetts to 38.0 in Arkansas (Tables B and 12). The wide range in state-specific teen rates is consistent with patterns observed in previous analyses (16,20).

Since 2007, the most recent national high, the birth rate for teenagers aged 15–19 has declined in all states, with the rates by race and Hispanic origin declining or essentially unchanged (Table B). From both 2007 to 2015 and 1991 to 2015, the teen birth rate did not significantly increase for any state by race and Hispanic-origin group.

Teen birth rates declined for Puerto Rico and Guam and were essentially unchanged for American Samoa and Northern Marianas. Rates among the territories ranged from 33.9 births per 1,000 teenagers aged 15–19 in Puerto Rico to 46.9 in American Samoa (Table 12).

Births to unmarried women

The birth rate for unmarried women declined for the seventh consecutive year in 2015, to 43.4 births per 1,000 unmarried women aged 15–44 (Tables 15 and 16; Figure 4). The 2015 nonmarital birth rate was 1% lower than in 2014 (43.9) and 16% lower than the peak of 51.8 in 2007 and 2008.

In contrast to trends among unmarried women, the birth rate for married women—which had declined 4% for 2005–2010—was stable from 2014 to 2015 and is up 6% since 2010 (from 84.3 per 1,000 married women aged 15–44 to 89.0), the most recent low (Figure 4).

The percentage of all births to unmarried women was 40.3% in 2015, similar to the 2014 percentage of 40.2% in 2014, the lowest levels since 2007. The percentage of all births to unmarried women peaked in 2009 at 41.0%. In 2015, the percentage of nonmarital births varied widely among population groups, from 16.4% for API mothers to 70.6% for non-Hispanic black mothers (Table 15). The *number* of nonmarital births decreased by less than 1% from 2014 (1,604,870) to 2015 (1,601,527).

Nonmarital birth rates declined from 2014 to 2015 for women in age groups under 30, with rates for teenagers aged 15–19 dropping 9% (to 20.2 per 1,000 in 2015). Conversely, rates rose for all age groups over age 30, reaching a historic peak for women aged 30–34 (60.3).

Compositional differences by race and Hispanic origin and maternal age among states are major contributing factors to the geographic variation in the percentage of births to unmarried mothers (Table I-4). The percentages ranged from less than one in five births in Utah (18.8%) to more than one-half of births in Louisiana, Mississippi, and New Mexico.

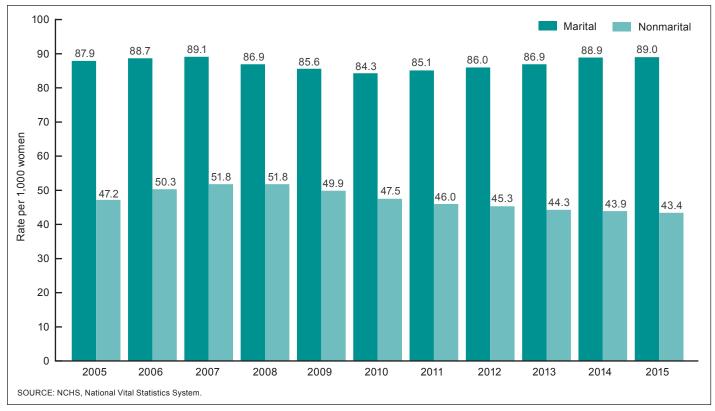

Figure 4. Trends in marital and nonmarital birth rates: United States, 2005–2015

Age and race of father

The **fertility rate of men** for the United States in 2015 was 46.1 births per 1,000 men aged 15–54, down slightly (less than 1%) from 2014 (46.3) (Table 17). Similar to fertility rates among women, rates declined for all men under age 30 (down 8% for men aged 15–19, 4% for men aged 20–24, and 3% for men aged 25–29) and rose for men aged 35 and over (up less than 1% for men aged 35–39, 3% for men aged 40–49, and 4% for men aged 50–54). Rates for men aged 30–34 and 55 and over were statistically unchanged in 2015. Rates for men aged 15–19 (10.4), 20–24 (51.6), and 25–29 (87.4) were once more at record lows in 2015, whereas the rates for men aged 35–39 (69.1), 40–44 (28.6), and 45–49 (9.6) were the highest in more than 40 years (17).

Information on age of father is often missing on birth certificates of children born to women under age 25 and to unmarried women. In 2015, age of father was not reported for 12% of all births, 31% of births to all women under age 20, and 28% of all nonmarital births. The procedures for computing birth rates by age of father that account for the missing data are described in the User Guide (12). Note also that the father's race was not reported for 18.3% of all records; rates by Hispanic origin of father are not shown because of concerns about reliability of these data.

The birth rate for white men was unchanged in 2015 at 44.4 births per 1,000 men aged 15–54, and declined 1% for black men, to 57.2. Rates declined for both white and black men under age 30, rose for both white men aged 30–54 and black men aged 35–54, and were unchanged for the remaining age groups.

Medical Services Utilization

Attendant at birth and place of delivery

In 2015, 98.5% of all births in the United States were in hospitals. Doctors of medicine attended 84.0% of all hospital births, certified nurse midwives 8.1%, and doctors of osteopathy 7.1% (Tables 19 and 20).

Out-of-hospital deliveries represented 1.5% of births in 2015. Of the more than 61,000 out-of-hospital births in the United States in 2015, 63.1% occurred in a residence (home) and 30.9% in a freestanding birthing center (Table 20). The percentage of out-of-hospital births has risen from 0.9% in 2007 to 1.5% in 2014 and 2015. The number of births occurring at home in 2015, 38,542, was the highest reported since reporting began for this item in 1989 (21). Vermont had the highest percentage of home births (2.5%) in 2015, with seven other states over 2.0% (Table I-12). Six states reported that less than one-half of a percentage of their births occurred at home.

Method of delivery

The cesarean delivery rate declined for the third year in a row to 32.0% of U.S. births in 2015, down from 32.2% in 2014 and the lowest rate since 2007 (Table 21). The rate peaked in 2009 at 32.9% after increasing every year since 1996 (20.7%).

In 2015, cesarean delivery rates declined for all maternal age groups. The largest changes were among maternal age groups under age 25, down 2% (from 26.9% to 26.4%) for women aged

20–24 and down 3% (from 21.0% to 20.4%) for women under age 20. Cesarean delivery continues to increase with advancing maternal age; women aged 40 and older were more than twice as likely to deliver by cesarean as women under age 20 (Table 22). Changes from 2014 to 2015 varied by race and Hispanic origin (Table 21). The rate declined for non-Hispanic white women for the sixth consecutive year, from 31.4% in 2014 to 31.1% in 2015 (down 5% from the 2009 peak of 32.8%). Rates declined for the second year in a row for Hispanic women, from 31.9% in 2014 to 31.7% in 2015. Rates for non-Hispanic black women remained essentially unchanged (35.5%). For the third year in a row, non-Hispanic white women had the lowest cesarean delivery rate; non-Hispanic black women continued to have the highest rate.

Cesarean delivery rates declined from 2014 to 2015 for 13 states (Table I–7). The largest decline was reported for Montana (5%). Rates increased for Hawaii (5%) and Utah (2%), and were unchanged for 35 states and DC.

In recent years, efforts within the obstetrics community have focused on reducing nonmedically indicated cesarean delivery and induction of labor prior to 39 weeks (22–25). Since 2009, cesarean delivery rates for births under 39 weeks of gestation (based on the obstetric estimate) have declined, driven largely by changes at 38 weeks (Figure 1). From 2014 to 2015, cesarean delivery rates also declined among births at 39 weeks and over.

The low-risk cesarean delivery rate—that is, cesarean delivery among nulliparous (first birth), term (37 completed weeks or more, based on the obstetric estimate), singleton (one fetus), vertex (head first) births—decreased from 26.0% to 25.8% from 2014 to 2015. Table C shows changes in low-risk cesarean delivery rates from 2014 by maternal age, race and Hispanic origin, and gestational age. A recent report examines the changes in low-risk cesarean delivery from 2009 through 2013 (26).

Information for 2015 on primary cesarean and vaginal birth after cesarean delivery for the revised reporting area (48 states and DC) is presented in the User Guide (12). A recent report examined trends in primary cesarean delivery rates by state and for limited reporting areas through 2012 (27).

Use of forceps and vacuum extraction continued to decline in 2015 (Table D). Use of either method of instrumental delivery decreased from 3.21% in 2014 to 3.14% in 2015 (down from 9.01% in 1990; data on method of delivery are available from 1989). Use of forceps remains the rarer method, essentially remaining steady in 2015 at 0.56% (from 0.57% in 2014), compared with vacuum extraction, which declined from 2.64% to 2.58%.

Infant Health Characteristics

Period of gestation

The preterm birth rate rose slightly in the United States for 2015, to 9.63% from 9.57% in 2014. This marks the first rise in the percentage of infants delivered at less than 37 completed weeks of gestation since 2007; the rate had declined steadily from 2007 (10.44%) to 2014 (Tables E and 23–25). (Gestational age data used in this report are based on the obstetric estimate

Table C. Low-risk cesarean delivery, by age of mother, race and Hispanic origin of mother, and gestational age: 2014 and 2015

Characteristic	2015	2014	Percent change, 2014–2015
		Percent

¹Quintuplets, sextuplets, and higher-order multiple births are not differentiated in the national data set.

from 2014 to 2015; this rate had also declined from 2007 (7.51%) to 2014 $(Table\ E)$.

The percentage of infants born early term (37–38 weeks) rose 2% from 2014 to 2015, from 24.76% to 24.99%, and the full-term birth rate declined slightly, from 58.72% to 58.47%. From 2007 to 2014, the early-term birth rate had generally been on the decline, and the full-term rate had been on the rise (Table E). Reductions in late preterm and early-term deliveries from 2007 through 2014 may have been related to heightened understanding of the increased neonatal risk at these gestational ages compared with full term, and with subsequent recommendations and efforts to reduce nonmedically indicated deliveries prior to 39 weeks (29–33).

Increases in preterm birth rates from 2014 to 2015 were seen for infants born to non-Hispanic black (from 13.23% to 13.41%) and Hispanic (9.03% to 9.14%) women; the rate for non-Hispanic white women was essentially stable at 8.88% in 2015, compared with 8.91% for 2014. Rates had declined for each group since 2007, however, down 10% for non-Hispanic white (from 9.90% in 2007), 9% for non-Hispanic black (14.71%), and 2% for Hispanic (9.35%) infants.

The preterm birth rate for singleton births also rose from 2014 to 2015, from 7.74% in 2014 to 7.82% in 2015. The

singleton preterm birth rate had declined from 2007 (8.59%) (Table F for 2015 data). Analyzing births in singleton deliveries separately is important because of the shorter average gestations of multiple births and their accordant influence on overall gestational age measures (see "Multiple births").

Increases in preterm birth rates were observed in four states from 2014 to 2015: Arkansas, California, Nebraska, and North Carolina. Rates declined in four states: Montana, New York, Texas, and Wyoming. Nonsignificant differences were reported for the remaining states and DC (Table I–8).

Birthweight

The percentage of infants born **low birthweight** (LBW) rose slightly in 2015 to 8.07% from 8.00% in 2014. Following increases of nearly 20% from 1990 through 2006, the LBW rate (less than 2,500 grams or 5 pounds, 8 ounces) trended slightly downward from the 2006 peak (8.26%) to 2012 (7.99%), but has not improved since (Tables 23–25). The very low birthweight rate (less than 1,500 grams) was stable at 1.40% from 2014 to 2015, but the percentage of moderately low birthweight infants (1,500–2,499 grams) increased from 6.60% to 6.67% (Table 24). Weight at birth is closely associated with gestational

²Under 32 completed weeks of gestation.

³Under 37 completed weeks of gestation.

⁴Less than 1,500 grams.

⁵Less than 2,500 grams.

age and can be an important and independent predictor of shortand long-term outcome (34–36).

LBW levels were essentially stable among births to non-Hispanic white mothers at 6.93%, but rose among births to non-Hispanic black (from 13.17% to 13.35%) and Hispanic (from 7.05% to 7.21%) mothers (Table 24). From 1990 through 2006, LBW rates rose among each group; since 2006, however, rates have declined somewhat among non-Hispanic white (5%) and non-Hispanic black (4%) infants. Among Hispanic newborns, rates had fluctuated fairly narrowly, but the 2015 LBW rate for this group is the highest reported since national data have been available by Hispanic origin (1993). See Tables I–9 and I–10 for 2015 state-specific very low birthweight and low birthweight rates by race and Hispanic origin.

Births in singleton deliveries are often examined separately because multiple births tend to be born smaller than singletons, and changes in multiple-birth incidence can influence overall low birthweight levels; see Table F and "Multiple births" section. As for all births, the rate of singleton LBW also rose for 2015, to 6.34% from 6.24% in 2014.

Multiple births

The **twin birth rate** declined to 33.5 twins per 1,000 births in 2015 from 33.9 in 2014. The twinning rate (births in twin deliveries per 1,000 total births) rose 76% from 1980 to 2009 (from 18.9 to 33.2 per 1,000), was generally stable from 2009

through 2012, and rose for 2013; the 2014 rate was the highest ever reported (Tables 26 and 27).

The **triplet and higher-order multiple birth rate** (triplet/+) declined again in 2015, down 9% to 103.6 triplets per 100,000 total births from 113.5 in 2014. This rate has fallen 46% since the 1998 peak (193.5) and is the lowest reported since 1992. The triplet/+ birth rate (number of triplets, quadruplets, and quintuplets and other higher-order multiples per 100,000 births) rose more than 400% from 1980 to 1998 (Tables 26 and 27).

There were 133,155 infants born in twin deliveries in 2015 (Table 27). The number of triplet/+ infants born in 2015, 4,123, was the lowest number reported in more than 2 decades (1992). In 2015, triplet/+ births included 3,871 triplets, 228 quadruplets, and 24 quintuplets and higher-order multiple births (Table F).

The decline in the total triplet/+ birth rate from 2014 to 2015 and since the 1998 peak is largely the result of declines in rates among non-Hispanic white women (Figure 5). The triplet/+ rate among non-Hispanic white women dropped 13% from 2014 (140.9) to 2015 (122.8) and is down more than 50% from 1998 (262.8). In contrast, rates for non-Hispanic black women rose modestly from 2014 to 2015 (from 89.7 to 104.4), and the triplet/+ rate for Hispanic women was essentially stable at 66.1 in 2015. Fluctuating trends from 1998 to 2015 were observed among non-Hispanic black women; among Hispanic women, triplet/+ birth rates have also fluctuated but are down from the highs of the early 2000s (e.g., 85.9 in 2003).

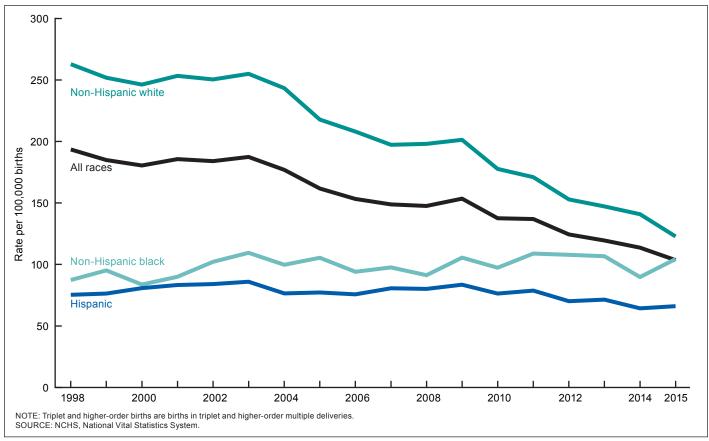

Figure 5. Triplet and higher-order multiple birth rates, by race and Hispanic origin of mother: United States, 1998–2015

The rise in multiple birth rates during the 1980s and 1990s has been associated with expanded use of fertility therapies (ovulation-inducing drugs and assisted reproductive technologies [ART]) and older maternal age at childbearing (37,38). An estimated 1.6% of 2013 births were the result of ART therapies alone (39). Recent declines in triplet/+ birth rates have been linked to changes in ART procedures (38,40).

Infants born in multiple deliveries ae at higher risk of adverse birth outcomes compared with singletons, with risk increasing with plurality. In 2015, as in previous years, more than 1 of every 2 twins and more than 9 of every 10 triplets were born preterm or low birthweight (Table F).

List of Internet Tables

(Available from: https://www.cdc.gov/nchs/data/nvsr/nvsr66/nvsr66 01 tables.pdf)

- I-1. Mean age of mother, by live-birth order and race and Hispanic origin of mother: United States, 1980–2015
- I–2. Births and seasonally adjusted birth rates, by month: United States. 2015
- I-3. Births, by day of week and method of delivery: United States, 2015
- I-4. Births to unmarried women, by race and Hispanic origin of mother: United States, each state and territory, 2015
- I-5. Births, by weight gain of mother during pregnancy, plurality, gestational age, and race and Hispanic origin of mother: United States, 2015
- I-6. Selected risk factors, obstetric procedures, characteristics of labor and delivery, and congenital anomalies, by age and race and Hispanic origin of mother: United States, 2015
- I-7. Total cesarean delivery and low-risk cesarean delivery, by race and Hispanic origin of mother: United States, each state and territory. 2015
- I–8. Preterm births, by race and Hispanic origin of mother: United States, each state and territory, 2015
- I–9. Low birthweight births, by race and Hispanic origin of mother: United States, each state and territory, 2015
- I–10. Very low birthweight births, by race and Hispanic origin of mother: United States, each state and territory, 2015
- I–11. Twin, triplet, and higher-order multiple births, by state: United States and each state, 2013–2015
- I-12. Births occurring at home, by state: United States and each state,

Table 1. Births and birth rates, by race: United States, specified years 1940-1955 and each year, 1960-2015

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Beginning with 1970, excludes births to nonresidents of the United States]

Table 1. Births and birth rates, by race: United States, specified years 1940–1955 and each year, 1960–2015—Con.

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Beginning with 1970, excludes births to nonresidents of the United States]

⁻⁻⁻ Data not available

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

¹ For 1960-1991, includes births to races not shown separately. For 1992 and later years, unknown race of mother is imputed; see Technical Notes.

²Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 12.

³Based on a 50% sample of births.

⁴Based on a 20%-50% sample of births.

⁵Figures by race exclude New Jersey.

Table 2. Births, by age of mother, live-birth order, and race of mother: United States, 2015

[Live-birth order refers to number of children born alive to mother]

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

Table 3. Birth rates, by age of mother, live-birth order, and race of mother: United States, 2015

[Rates are births per 1,000 women in specified age and racial group. Fertility rate computed by relating total births, regardless of age of mother, to women aged 15–44 years. Populations estimated as of July 1. Live-birth order refers to number of children born alive to mother. Figures for live-birth order not stated are distributed]

						Age of	mother

^{*} Figure does not meet standards of reliability or precision; based on fewer than 20 births in numerator.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

^{0.0} Quantity more than zero but less than 0.05.

¹Birth rates computed by relating births to women aged 45 and over to women aged 45–49; see Technical Notes.

Table 4. Birth rates, by age of mother: United States, 1970–2015, and by age and race of mother: United States, 1980–2015

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Birth rates are births per 1,000 women in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years]

Table 4. Birth rates, by age of mother: United States, 1970–2015, and by age and race of mother: United States, 1980-2015-Con.

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Birth rates are births per 1,000 women in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years]

^{*} Figure does not meet standards of reliability or precision; based on fewer than 20 births in numerator.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

¹Beginning in 1997, birth rates are computed by relating births to women aged 45 and over to women aged 45-49; see Technical Notes.

²For 1970–1991, includes births to races not shown separately. For 1992 and later years, unknown race of mother is imputed; see Technical Notes.

Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 12.

Based on a 50% sample of births.

Table 5. Births and birth rates, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2015

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey estimates as of July 1 for 2010–2015; prior to 2010, populations for specified Hispanic groups based on Current Population Survey estimates as of April 1 for census years and estimated as of July 1 for all other years]

Table 5. Births and birth rates, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2015—Con.

[Birth rates are births per 1,000 population in specified group. Fertility rates are births per 1,000 women aged 15–44 in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey estimates as of July 1 for 2010–2015; prior to 2010, populations for specified Hispanic groups based on Current Population Survey estimates as of April 1 for census years and estimated as of July 1 for all other years]

⁻⁻⁻ Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes. This table will be updated to include rates for specified Hispanic-origin groups when 2015 population data for these groups are available.

¹Includes origin not stated.

²Includes races other than white and black.

³Excludes data for New Hampshire, which did not report Hispanic origin.

⁴Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

⁵Excludes data for Louisiana, New Hampshire, and Oklahoma, which did not report Hispanic origin.

⁶Rates for the Central and South American population include other and unknown Hispanic.

Table 6. Births, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2015

[Live-birth order refers to number of children born alive to mother. Includes births with stated origin of mother only]

Quantity zero.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes.

¹Includes races other than white and black.

Table 7. Birth rates, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2015

[Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15–44. Birth rates are births per 1,000 women in specified age and racial group. Populations estimated as of July 1. Live-birth order refers to number of children born alive to mother. Missing values for live-birth order not stated have been distributed]

^{*} Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes. This table will be updated to include rates for specified Hispanic-origin groups when 2015 population data for these groups are available.

^{0.0} Quantity more than zero but less than 0.05.

¹Fertility rates computed by relating total births, regardless of age of mother, to women aged 15–44.

²Birth rates computed by relating births to women aged 45 and over to women aged 45-49; see Technical Notes.

³Includes origin not stated.

⁴Includes races other than white and black.

Table 8. Birth rates, by age and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 1989–2015—Con.

[Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Fertility rates are births per 1,000 women aged 15–44 in specified racial group. Birth rates are births per 1,000 women in specified group. Populations estimated as of April 1 for census years and estimated as of July 1 for all other years. Populations for specified Hispanic groups based on American Community Survey (ACS) estimates as of July 1 for 2010–2015; prior to 2010, populations for specified Hispanic groups based on Current Population Survey (CPS) estimates as of April 1 for census years and estimated as of July 1 for all other years]

							Age of	mother				
	Total fertility	Fertility			15–19

⁻⁻⁻ Data not available

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes. Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes. This table will be updated to include rates for specified Hispanic-origin groups when 2015 population data for these groups are available.

^{*} Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator or, for the Hispanic subgroups, a relative standard error of 23% or more for the ACS-based rates of 2010–2015 or fewer than 50 women in the denominator for census years and 75,000 women for noncensus years for the CPS-based rates for 1989–2009; see reference 12.

¹Fertility rates computed by relating total births, regardless of age of mother, to women aged 15-44.

²Beginning in 1997, birth rates computed by relating births to women aged 45 and over to women aged 45–49; see Technical Notes.

³Excludes data for New Hampshire, which did not report Hispanic origin.

⁴Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

⁵Excludes data for Louisiana, New Hampshire, and Oklahoma, which did not report Hispanic origin.

⁶Includes Central and South American and other and unknown Hispanic.

⁷Includes origin not stated.

⁸Includes races other than white and black.

Table 9. Birth rates, by live-birth order and race and Hispanic origin of mother: United States, 1980-2015

[Rates are births per 1,000 women aged 15–44. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Figures for live-birth order not stated are distributed]

¹Includes races other than white and black.

²Includes origin not stated.

Includes origin not stated.

3Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 12.

4Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes.

5Excludes data for New Hampshire, which did not report Hispanic origin.

6Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

⁷Includes all persons of Hispanic origin of any race.

American Samoa	1,078							_	_	-	1,078
Northern Marianas	427	-	-	-	_	-	-	422	3	-	5

⁻⁻⁻ Data not available.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see Technical Notes.

⁻ Quantity zero.

¹Includes races other than white and black.

²Excludes data for the territories.

Table 12. Birth rates, by age of mother: United States, each state and territory, 2015

[By place of residence. Fertility rates are births per 1,000 women aged 15–44; total fertility rates are sums of birth rates for 5-year age groups multiplied by 5; birth rates by age are births per 1,000 women in specified age group estimated in each area. Populations estimated as of July 1]

NOTE: Population data for computing birth rates were provided by the U.S. Census Bureau. Rates by state may differ from rates computed on the basis of other population estimates.

^{*} Figure does not meet standards of reliability or precision; birth rates based on fewer than 20 births.

¹Birth rates computed by relating births to women aged 45 and over to women aged 45–49; see Technical Notes.

²Excludes data for the territories

Table 13. Selected demographic characteristics of births, by race of mother: United States, 2015

[Birth rates are births per 1,000 population. Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15–44. Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Populations estimated as of July 1. Mean age at first birth is the arithmetic average of the age of mothers at the time of birth, computed directly from the frequency of first births by age of mother]

Characteristic	All races	White	Black	American Indian or Alaska Native	Asian or Pacific Islander
			Number		
Births	3,978,497	3,012,855	640,079	44,299	281,264
			Rate		
Birth rate	12.4	12.0	14.3	9.7	14.0
Fertility rate	62.5	63.1	64.0	43.9	58.5
Total fertility rate	1,843.5	1,864.0	1,852.5	1,262.5	1,646.0
Sex ratio ¹	1,048	1,050	1,033	1,052	1,062
All births			Percent

4th and higher-order births ²	12.4	12.0	16.3	21.7	6.7
Births to unmarried mothers	40.3	35.8	70.1	65.8	16.4
Mothers born in the 50 states or District of Columbia	77.4	81.0	82.6	94.6	23.3
			Mean		
Age of mother at first birth	26.4	26.5	24.4	23.2	29.6

¹Male births per 1,000 female births.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

²Based on live-birth order.

Table 14. Selected demographic characteristics of births, by Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2015

[Birth rates are births per 1,000 population. Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15–44. Total fertility rates are sums of birth rates for 5-year age groups multiplied by 5. Populations estimated as of July 1. Mean age at first birth is the arithmetic average of the age of mothers at the time of birth, computed directly from the frequency of first births by age of mother]

⁻⁻⁻ Data not available.

¹Includes origin not stated.

Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Data for persons of Hispanic origin are included in the data for each race group according to the mother's reported race; see Technical Notes. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes.

Includes all persons of Hispanic origin of any race.

Birth rates computed by relating total births to unmarried mothers, regardless of age of mother, to unmarried women aged 15–44; see Technical Notes.

⁵Birth rates computed by relating births to unmarried women aged 40 and over to unmarried women aged 40–44.

NOTES: For 49 states, the District of Columbia, and New York City, marital status is reported in the birth registration process; for New York, mother's marital status is inferred; see reference 12. Rates cannot be computed for unmarried non-Hispanic black women or for American Indian or Alaska Native women because the neccessary populations are not available.

Table 16. Birth rates for unmarried women, by age of mother: United States, 1970, 1975, and 1980–2015, and by age and race and Hispanic origin of mother: United States, 1980–2015

⁻⁻⁻ Data not available

NOTES: Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes. Rates cannot be computed for unmarried non-Hispanic black women or for American Indian or Alaska Native women because the necessary populations are not available.

Pates computed by relating total births to unmarried mothers, regardless of age of mother, to unmarried women aged 15–44.

Beginning in 1997, birth rates computed by relating births to unmarried women aged 40 and over to unmarried women aged 40–44; see Technical Notes.

³Includes races other than white, black, and Asian or Pacific Islander.

⁴Data for states in which marital status was not reported have been inferred and included with data from the remaining states; see Technical Notes.

⁵Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 12.

Births to unmarried women are estimated for the United States from data for registration areas in which marital status of mother was reported; see reference 52.

⁷Based on a 50% sample of births.

Rates based on data for 48 states and the District of Columbia, which reported Hispanic origin on the birth certificate. Rates for age group 35–39 are based on births to unmarried women aged 35-44.

⁹Includes all persons of Hispanic origin of any race.

Table 17. Birth rates, by age and race of father: United States, 1980–2015

[Rates are births per 1,000 men in specified group. Populations based on counts enumerated as of April 1 for census years and estimated as of July 1 for all other years. Missing values for age of father not stated have been distributed]

						Age of father

¹Rates computed by relating total births, regardless of age of father, to men aged 15-54.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes. In this table, all men, including Hispanic men, are classified only according to their race; see Technical Notes. Age of father was not stated for 12.1% of births in 2015. See reference 12 for information on the calculation of birth rates by age of father.

²Rates computed by relating births of fathers under age 20 to men aged 15–19.

³Includes races other than white and black.

⁴Based on 100% of births in selected states and on a 50% sample of births in all other states; see reference 12.

Table 18. Selected medical and health characteristics of births, by race of mother: United States, 2015

Characteristic	All races	White	Black	American Indian or Alaska Native	Asian or Pacific Islander
Mother			Percent		
Diabetes during pregancy	6.5	6.2	5.8	9.9	11.1
Weight gain of less than 11 lbs	9.1	8.3	13.1	13.1	7.1
Weight gain of more than 40 lbs	21.0	21.6	21.4	22.2	14.3
Induction of labor	23.8	24.5	22.9	24.2	18.5
CNM delivery ¹	8.5	8.7	7.4	17.8	7.2
Cesarean delivery	32.0	31.3	35.3	28.3	33.0
Infant					
Gestational age:					
Preterm ²	9.6	9.0	13.2	10.5	8.6
Early preterm ³	2.8	2.4	4.7	2.8	2.2
Late preterm ⁴	6.9	6.6	8.4	7.7	6.4
Birthweight ⁵ :					
Very low birthweight ⁶	1.4	1.1	2.8	1.3	1.1
Low birthweight ⁷	8.1	7.0	13.0	7.5	8.4
4,000 grams or more	8.0	9.0	4.6	10.1	4.8
Twin birth ⁸	33.5	32.8	38.7	25.1	29.9
Triplet or higher-order birth ⁹	103.6	107.1	101.7	38.4	81.4

¹Births delivered by certified nurse midwives (CNMs).

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. In this table, all women, including Hispanic women, are classified only according to their race; see Technical Notes.

²Born before 37 completed weeks of gestation based on the obstetric estimate; see Technical Notes.

³Born before 34 completed weeks of gestation based on the obstetric estimate; see Technical Notes.

⁴Born between 34 and 36 completed weeks of gestation based on the obstetric estimate; see Technical Notes.

⁵Equivalents of gram weights in pounds are shown in Technical Notes.

⁶Less than 1,500 grams.

⁷Less than 2,500 grams.

⁸Live births in twin deliveries per 1,000 live births.

⁹Live births in triplet and other higher-order multiple deliveries per 100,000 live births.

¹Includes races other than white and black and origin not stated.

Place and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes.

Includes all persons of Hispanic origin of any race.

^{*}Percentage of all live births by cesarean delivery.

*Excludes data for New Hampshire, which did not report Hispanic origin.

*Excludes data for New Hampshire and Oklahoma, which did not report data by Hispanic origin. Oklahoma also did not report method of delivery.

*Excludes data for New Hampshire and Oklahoma, which did not report data by Hispanic origin. Oklahoma also did not report method of delivery.

*Excludes data for Louisiana, Maryland, Nebraska, Nevada, and Oklahoma, which did not report method of delivery on the birth certificate; data by Hispanic origin also exclude New Hampshire, which did not report Hispanic origin.

⁻ Quantity zero.

^{0.0} Quantity more than zero but less than 0.05.

¹Expressed in completed weeks based on the obstetric estimate of gestation; see Technical Notes.

²Equivalents of gram weights in pounds and ounces are shown in Technical Notes.

³Includes races other than white and black and origin not stated.

⁴Birthweight of less than 1,500 grams.

⁵Birthweight of less than 2,500 grams.

⁶Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes.

⁷Includes all persons of Hispanic origin of any race.

¹Births of less than 32 completed weeks of gestation based on the obstetric estimate of gestation; see Technical Notes.

²Births of less than 37 completed weeks of gestation based on the obstetric estimate of gestation; see Technical Notes.

³Includes races other than white and black and origin not stated.

⁴Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes.

⁵Includes all persons of Hispanic origin of any race.

⁶Less than 1,500 grams; equivalent in pounds shown in Technical Notes.

 $^{^{7}\}text{Less}$ than 2,500 grams; equivalent in pounds shown in Technical Notes.

⁸Data by Hispanic origin exclude New Hampshire, which did not report Hispanic origin.

⁹Data by Hispanic origin exclude New Hampshire and Oklahoma, which did not report Hispanic origin.

¹⁰Data by Hispanic origin exclude New Hampshire, Oklahoma, and Louisiana, which did not report Hispanic origin.

National Vital Statistics Reports, Vol. 66, No. 1, January 5, 2017

¹Less than 37 completed weeks of gestation based on the obstetric estimate; see Technical Notes.

²Less than 2,500 grams; equivalent in pounds shown in Technical Notes.

³Less than 34 completed weeks of gestation based on the obstetric estimate; see Technical Notes.

⁴34–36 completed weeks of gestation based on the obstetric estimate; see Technical Notes.

⁵Less than 1,500 grams; equivalent in pounds shown in Technical Notes.

^{61,500–2,499} grams; equivalent in pounds shown in Technical Notes.

⁷Includes races other than white and black and origin not stated.

Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes.

⁹Includes all persons of Hispanic origin of any race.

⁷ 1990	595,073	10,713	235	18.4	18.0	39.5

¹Number of live births in all multiple deliveries per 1,000 live births.

²Number of live births in twin deliveries per 1,000 live births.

³Number of live births in triplet and other higher-order deliveries per 100,000 live births.

⁴Includes races other than white and black and origin not stated.

⁵Race and Hispanic origin are reported separately on birth certificates. Persons of Hispanic origin may be of any race. Race categories are consistent with 1977 Office of Management and Budget standards. Forty-nine states and the District of Columbia reported multiple-race data for 2015 that were bridged to single-race categories for comparability with other states; see Technical Notes. Multiple-race reporting areas vary for 2003–2015; see Technical Notes.

⁶Excludes data for New Hampshire, which did not report Hispanic origin.

⁷Excludes data for New Hampshire and Oklahoma, which did not report Hispanic origin.

⁸Includes all persons of Hispanic origin of any race.

Technical Notes

Data source

Data shown in this report for 2015 are based on 100% of the birth certificates filed in all states and the District of Columbia (DC). The data are provided to the National Center for Health Statistics (NCHS) through the Vital Statistics Cooperative Program. Information on the percentage of records with missing information for maternal and infant characteristics included in this report is shown by state in the User Guide (12). Methodological and measurement information for these characteristics is available in "The Public Use Natality File—2015 Update" (12).

1989 and 2003 revisions of U.S. Standard Certificate of Live Birth

This report includes 2015 data on items that are collected on both the 1989 revision of the U.S. Standard Certificate of Live Birth (unrevised) and the 2003 revision (revised). The 2003 revision is described in the Introduction to this report and detailed elsewhere (6,7).

Age of mother

Age of mother is computed in most cases from the mother's and infant's dates of birth as reported on the birth certificate. The mother's age is directly reported by one territory (American Samoa). From 1964 through 1996, mother's age was edited for a range of 10-49 years. Births reported as occurring to mothers under age 10 or over age 49 are assigned the average age of mothers based on a previous year with the same race, Hispanic origin, and total birth order (total of live births and fetal deaths). Beginning in 1997, age of mother was imputed for ages 9 and under and 55 and over. This procedure was used through 2006 for births in states using the 1989 certificate. Beginning in 2003 for births occurring in revised states, a wider age range has been used—age of mother is imputed for ages 8 and under and 65 and over (mothers aged 9 are recoded as aged 10). Starting in 2007, the same procedures have been used for states using the 1989 certificate. A review and verification of unedited data for several years including 2007 showed that the vast majority of births reported as occurring to women aged 50 and over were to women aged 50-54. In this report, the final age group shown in the tables (45–49, 45–54, or 50–54) includes births to mothers up to age 64.

The numbers of births to women aged 50 and over have been too small historically to compute age-specific birth rates. These births have been included with births to women aged 45–49 for computing birth rates. In 2015, age of mother was not reported on 0.01% of the records (by occurrence); for these records, age of mother was imputed according to the last record with the same race and total birth order.

Hispanic origin and race

Hispanic origin

Hispanic origin and race are reported separately on the birth certificate. Data are shown in most cases for five specified Hispanic groups: Mexican, Puerto Rican, Cuban, Central and South American, and other and unknown Hispanic. In tabulations of birth data by race and Hispanic origin, data for persons of Hispanic origin are not further classified by race because the vast majority of births to Hispanic women are reported as white. In tabulations of birth data by race only, data for persons of Hispanic origin are included in the data for each race group according to the mother's reported race. In tabulations that include Hispanic origin, data for non-Hispanic persons are classified according to the race of the mother due to substantial differences in fertility and maternal and infant health characteristics between Hispanic and non-Hispanic white women.

Items asking for the Hispanic origin of the mother and the father have been included on the birth certificates of all states, DC, Virgin Islands, and Guam since 1993, and on the birth certificates of Puerto Rico starting in 2005 and Northern Marianas starting in 2010 (12). American Samoa does not collect this information.

The Hispanic-origin question on the 2003 revision of the birth certificate asks respondents to select only one response. Occasionally, however, more than one Hispanic-origin response is given, that is, more than one specified Hispanic group (Mexican, Puerto Rican, Cuban, or Central and South American). From 2003 through 2012, respondents who selected more than one Hispanic origin on the birth certificate were classified as "other Hispanic." Beginning with the 2013 data year, respondents who select more than one Hispanic origin are randomly assigned to a single Hispanic origin. This change was implemented to be consistent with the coding methods of the American Community Survey (41), on which the rates for the specified Hispanic groups from 2010 are based (see "Population estimates for specific Hispanic groups"). (The Current Population Survey [CPS], on which the population denominators before 2010 are based, queried respondents who report more than one Hispanic origin to obtain a single origin only [42].)

Change in births to other and unknown Hispanic women—
The number of births to "other and unknown Hispanic" women increased by 2% from 141,390 in 2014 to 143,536 in 2015. This number rose each year from 2005 through 2014. Factors that may have influenced this rise are not clear but may include less specificity in respondent reporting of Hispanic origin and increases in the populations of groups included in the "other Hispanic" category. The 48 (fully) revised states and DC accounted for 96% of Hispanic births in the United States in 2015. For the percentage of records for which Hispanic origin of the parents was not reported in 2015 and additional information on the reporting of Hispanic origin, see the User Guide (12).

Single, multiple, and "bridged" race of mother and father

In 1997, the Office of Management and Budget (OMB) issued "Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity," which revised the 1977 "Race and Ethnic Standards for Federal Statistics and Administrative Reporting" (13,43). These documents specify quidelines for collecting, tabulating, and presenting race and ethnicity data within the federal statistical system. The 1997 revised standards incorporated two major changes designed to reflect the changing racial and ethnic profile of the United States. First, the revision increased from four to five the minimum set of categories to be used by federal agencies for identification of race. The 1977 standards required federal agencies to report race-specific tabulations using a minimum set of four singlerace categories: American Indian or Alaska Native (AIAN), Asian or Pacific Islander (API), black, and white. The five categories for race specified in the 1997 standards are: AIAN, Asian, black or African American, Native Hawaiian or Other Pacific Islander (NHOPI), and white. The revised standards called for reporting Asian persons separately from NHOPI persons. Second, the revised standards require federal data collection programs to allow respondents to select one or more race category.

Beginning with the 2000 decennial census, the U.S. Census Bureau collected race and ethnicity data in accordance with the 1997 revised standards; however, the National Vital Statistics System, which is based on data collected by the states, will not be fully compliant with the new standards until all of the states revise their birth certificates to reflect the new standards. Thus, beginning with the 2000 data year, the numerators (births) for birth rates are incompatible with the denominators (populations); see "Population denominators." To compute rates, it is necessary to "bridge" population data for multiple-race persons to single-race categories. This has been done for birth rates by race presented in this report. Once all states revise their birth registration systems to be compliant with the 1997 OMB standards, the use of bridged populations can be discontinued.

Forty-nine states and DC, which represent 99% of all U.S. resident births, reported multiple-race data in 2015. Multiple-race reporting areas contain the 49 revised or partially revised states (see "1989 and 2003 revisions of U.S. Standard Certificate of Live Birth"), DC, Guam, and Commonwealth of the Northern Marianas, which used the 2003 revision of the U.S. Standard Certificate of Live Birth. Only Connecticut, which revised its birth certificate in 2016, and Puerto Rico, which revised in 2005, reported race according to the 1989 certificate revision.

Slightly more than 2% of mothers in the multiple-race reporting area reported more than one race in 2015 (12). Prior to 2015, the multiple-race reporting states varied widely, increasing from 6 states in 2003 to 49 states and DC in 2015.

Data from the vital records of the remaining state, Connecticut, and two territories, American Samoa and Virgin Islands, followed the 1977 OMB standards in which only a single race is reported (43). In addition, these areas also reported the minimum set of four races as stipulated in the 1977 standards, compared with the minimum of five races for the 1997 standards.

To provide uniformity and comparability of data during the transition period before multiple-race data are available for all reporting areas, bridging the responses of those who reported more than one race to a single race is necessary. The bridging procedure for multiple-race mothers and fathers is based on the procedure used to bridge multiracial population estimates; see "Population denominators" (44). Multiple race is imputed to a single race (AIAN, API, black, or white) according to the combination of races, Hispanic origin, sex, and age of the mother or father indicated on the birth certificate. The imputation procedure is detailed elsewhere (45,46).

Where race of the mother is not reported, if the race of the father is known, the race of the father is assigned to the mother. When information is not available for either parent, the race of the mother is imputed according to the specific race of the mother on the preceding record with a known race of mother; see the User Guide (12). In 2015, race of mother was imputed for 5.9% of births (by occurrence of birth).

Trend data by race shown in this report are by race of mother for all years beginning with the 1980 data year. Text references to white births and white mothers or to black births and black mothers are used interchangeably for ease in writing.

For detailed information and discussion on race of mother and father, see the User Guide (12).

Marital status, attendant and place of birth, pregnancy risk factors, method of delivery, and gestational age

For information and discussion on data quality of marital status, attendant and place of birth, pregnancy risk factors, method of delivery, and gestational age, see the User Guide (12).

Gestational age

Beginning with the 2014 data year, NCHS transitioned to a new standard for estimating the gestational age of the newborn. The new measure—obstetric estimate of gestation at delivery (OE)—replaces the measure based on the date of the last normal menses (LMP) (28). National data based on OE are available only from data year 2007 forward. Gestational age estimates differ somewhat between OE- and LMP-based measures. Accordingly, gestational age data in this report are based on OE. However, LMP-based data are also available for all relevant report tables upon request. For example, the 2015 OE-based preterm birth rate is 9.63% compared with the LMP-based rate of 11.29%. Of note, both measures show declines in the rate of preterm birth from 2007 to 2014. Information and discussion of the reasons for the change, and a detailed comparison of the two measures, are presented elsewhere (28).

For information and discussion on data quality of attendant and place of birth, pregnancy risk factors, and method of delivery, see the User Guide (12).

Birthweight

Birthweight is reported in some areas in pounds and ounces rather than in grams; however, the metric system has been used

in tabulating and presenting the statistics to facilitate comparison with data published by other groups. Equivalents of the gram weights in terms of pounds and ounces are:

```
Less than 500 grams = 1 lb. 1 oz. or less 500–999 grams = 1 lb. 2 oz.–2 lb. 3 oz. 1,000–1,499 grams = 2 lb. 4 oz.–3 lb. 4 oz. 1,500–1,999 grams = 3 lb. 5 oz.–4 lb. 6 oz. 2,000–2,499 grams = 4 lb. 7 oz.–5 lb. 8 oz. 2,500–2,999 grams = 5 lb. 9 oz.–6 lb. 9 oz. 3,000–3,499 grams = 6 lb. 10 oz.–7 lb. 11 oz. 3,500–3,999 grams = 7 lb. 12 oz.–8 lb. 13 oz. 4,000–4,499 grams = 8 lb. 14 oz.–9 lb. 14 oz. 4,500–4,999 grams = 9 lb. 15 oz.–11 lb. 0 oz. 5,000 grams or more = 11 lb. 1 oz. or more
```

Computations of percentages, percent distributions, and means

For information and discussion on computations of percentages, percent distributions, and means, see the User Guide (12).

Population denominators

The birth and fertility rates for 2015 shown in Tables A, B, 1, 3–5, 7–9, 12–14, and 17 are based on populations estimated from the 2010 census as of July 1, 2015. These populations are shown in the User Guide (12). The population estimates have been provided by the U.S. Census Bureau (47), and they are based on the 2010 census counts by age, sex, and race, which have been modified for consistency with 1977 OMB race categories and historical categories for birth data. The modification procedures are described in detail elsewhere (44).

The birth and fertility rates by state shown in Tables B and 12 are based on state-level population counts, which are based on the 2010 census provided by the U.S. Census Bureau (44). Birth and fertility rates for the territories except Puerto Rico shown in Table 12 are based on population estimates provided by the U.S. Census Bureau's International Data Base (48). Rates for Puerto Rico are based on population estimates from the 2010 census as of July 1, 2015, and are provided by the U.S. Census Bureau (49).

Rates by state and territory shown in this report may differ from rates computed on the basis of other population estimates; rates for smaller population subgroups, such as those for teen mothers, may be particularly affected by differences in population estimates. Birth and fertility rates by month shown in Table I–2 are based on monthly population estimates for 2015, which are also based on 2010 census estimates. For 2015, rates for unmarried women shown in Tables 15 and 16 are based on distributions of the population by marital status averaged over a 2-year period for 2014–2015. These distributions were reported by the U.S. Census Bureau in the March CPS for each year (50,51), and have been adjusted to July 1, 2015 (2010 census), population levels (47) by NCHS' Division of Vital Statistics (52). As of the preparation of this report, data from the March CPS for 2016 were not available. Accordingly, the distributions of the

population by marital status were based on a 2-year average of 2014 and 2015 (50,51). For earlier years, rates for unmarried women are based on distributions of the population by marital status averaged over a 3-year period (52).

Population estimates for specific Hispanic groups

The 2015 population estimates for the specific Hispanic population groups were not available as of the preparation of this report (53). Accordingly, birth and fertility rates for these groups are not shown in this report. Once available, birth and fertility rates for the specific Hispanic population groups will be added to Tables 5, 7, 8, and 14. The 2015 special population estimates for Hispanic groups will be shown in the User Guide once available (12). More information about the populations for Hispanic groups is available elsewhere (12,54,55).

Computation of rates

For information and discussion on computations of rates, see the User Guide (12).

Random variation and significance testing for natality data

For information and discussion on random variation and significance testing for natality data, see the 2010 User Guide (56).

For information and discussion on random variation and significance testing for birth and fertility rates for Mexican, Puerto Rican, Cuban, Central and South American, and other Hispanic populations based on American Community Survey population estimates, see the User Guide (12).

Definition of medical terms

For definitions and discussion of maternal and infant health characteristics, see "Guide to Completing the Facility Worksheets for the Certificate of Live Birth and Report of Fetal Death" (57).

This report was prepared under the general direction of Delton Atkinson, Director of the Division of Vital Statistics (DVS), and Amy Branum, Chief of the Reproductive Statistics Branch (RSB). Rajesh Virkar, Chief of the Systems, Programming, and Statistical Resources Branch (SPSRB), and Steve J. Steimel, Annie S. Liu, and Li Lu provided computer programming support and statistical tables. Steve J. Steimel and Annie S. Liu of SPSRB prepared the natality file. The Data Acquisition and Evaluation Branch staff of DVS evaluated the quality of and acceptance procedures for the state data files on which this report is based. The Registration Methods staff of DVS consulted with state vital statistics offices regarding the collection of birth certificate data. This report was edited and produced by CDC/OSELS/NCHS/OD/Office of Information Services, Information Design and Publishing Staff: Jane Sudol edited the report; typesetting was done by Odell D. Eldridge (contractor); and graphics were produced by Sarah Hinkle.
