

Title: Percent of coronavirus disease 2019 (COVID-19) deaths occurring among race and Hispanic origin groups, United States.

Data as of 4/9/2020

Race and Hispanic Origin¹	Percent of COVID-19 Deaths
Hispanic	16.0
Non-Hispanic black	17.1
Non-Hispanic white	54.4
Non-Hispanic other race ²	12.6

NOTE: Percentages are based on deaths with confirmed or presumed COVID-19, coded to ICD-10 code U07.1. Percentages in this table are based on the total number of COVID-19 deaths (N=4,169) received and coded as of the date of analysis (4/9/2020) and do not represent all deaths that occurred in that period. The percentages in this table were calculated by dividing the number of COVID-19 deaths for each race and Hispanic Origin group by the total number of COVID-19 deaths. Percentages may not sum to 100 due to rounding. Data during this period are incomplete because of the lag in time between when the death occurred and when the death certificate is completed, submitted to NCHS and processed for reporting purposes. This delay can range from 1 week to 8 weeks or more. **The distribution of deaths involving COVID-19 by race/ethnicity shown on this table should not be compared to the race/ethnicity distribution of the U.S. population because COVID-19 deaths are concentrated in certain geographic locations where the racial and ethnic population distribution differs from that of the United States overall.**

¹ Race and Hispanic Origin is based on bridged-race categories (see: https://www.cdc.gov/nchs/nvss/bridged_race.htm).

² Includes Hispanic Origin unknown.
