Detailed Tables

1.	Frequency distributions of respondent-assessed health status, by selected characteristics: United States, 2006	10
2.	Age-adjusted percent distributions (with standard errors) of respondent-assessed health status, by selected characteristics: United States, 2006	12
3.	Frequency distributions of limitation in usual activities, and frequencies of limitations due to 1 or more chronic conditions, by selected characteristics: United States, 2006	14
4.	Age-adjusted percent distributions (with standard errors) of limitation in usual activities, and percentages (with standard errors) of persons limited due to 1 or more chronic conditions, by selected characteristics: United States, 2006	16
5.	Frequencies and age-adjusted percentages (with standard errors) of persons having limitation in activities of daily living and instrumental activities of daily living among persons 18 years of age and over, by selected characteristics: United States, 2006	18
6.	Frequency distributions and age-adjusted percent distributions (with standard errors) of limitation in work activity due to health problems among persons 18–69 years of age, by selected characteristics: United States, 2006	20
7.	Frequencies and age-adjusted percentages (with standard errors) of persons under 18 years of age who were receiving special education or early intervention services, by selected characteristics: United States, 2006	22
8.	Annualized frequencies and age-adjusted annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by selected characteristics: United States, 2006	24
9.	Annualized frequencies of medically consulted injury and poisoning episodes, by external cause and selected characteristics: United States, 2006	26
10.	Age-adjusted annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by external cause and selected characteristics: United States, 2006	28
11.	Annualized frequencies of medically consulted injury and poisoning episodes, by activity engaged in at the time of the episode and selected characteristics: United States, 2006	30
12.	Age-adjusted annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by activity engaged in at the time of the episode and selected characteristics: United States, 2006	32
13.	Annualized frequencies of medically consulted injury and poisoning episodes, by place of occurrence and selected characteristics: United States, 2006	34
14.	Age-adjusted annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by place of occurrence and selected characteristics: United States, 2006	36
15.	Frequencies and age-adjusted percentages (with standard errors) of persons who did not receive medical care or who delayed medical care in the past year due to cost, by selected characteristics: United States, 2006	39
16.	Frequency distributions of number of overnight hospital stays during the past 12 months, by selected characteristics: United States, 2006	42
17.	Age-adjusted percent distributions (with standard errors) of number of overnight hospital stays during the past 12 months, by selected characteristics: United States, 2006	44
18.	Frequency distributions of type of health insurance coverage for persons under age 65 years and for persons 65 years of age and over, by selected characteristics: United States, 2006	46
19.	Age-adjusted percent distributions (with standard errors) of type of health insurance coverage for persons under age 65 years and for persons 65 years of age and over, by selected characteristics: United States, 2006	49
20.	Frequency distributions of any period without health insurance coverage during the past 12 months and frequencies of persons who were without coverage for 6 months or less or 7–12 months, among currently insured persons under age 65 years, by selected characteristics: United States, 2006	52
21.	Age-adjusted percent distributions (with standard errors) of any period without health insurance coverage during the past 12 months and percentages (with standard errors) of persons who were without coverage for 6 months or less or 7–12 months, among currently insured persons under age 65 years, by selected characteristics: United States, 2006	54
22.	Frequency distributions of length of time since last had health insurance coverage among currently uninsured persons under age 65 years, by selected characteristics: United States, 2006	56
23.	Age-adjusted percent distributions (with standard errors) of length of time since last had health insurance coverage among currently uninsured persons under age 65 years, by selected characteristics: United States, 2006	58
24.	Frequencies of currently uninsured persons under age 65 years, by selected reasons for no health insurance coverage and selected characteristics: United States, 2006	60
25.	Age-adjusted percentages (with standard errors) of currently uninsured persons under age 65 years, by selected reasons for no health insurance coverage and selected characteristics: United States, 2006	62

Appendix Tables

III.	Weighted counts and weighted percentages of injury and poisoning episodes with unknown information: National Health Interview Survey, 2006	66
IV.	Weighted counts and weighted percentages of persons with unknown information on selected sociodemographic characteristics: National Health Interview Survey, 2006	66
V.	Crude percent distributions (with standard errors) of respondent-assessed health status, by selected characteristics: United States, 2006	72
VI.	Crude percent distributions (with standard errors) of limitation in usual activities, and percentages (with standard errors) of persons limited due to 1 or more chronic conditions, by selected characteristics: United States, 2006	75
VII.	Crude percentages (with standard errors) of persons having limitation in activities of daily living and instrumental activities of daily living among persons 18 years of age and over, by selected characteristics: United States, 2006	77
VIII.	Crude percent distributions (with standard errors) of limitation in work activity due to health problems among persons 18–69 years of age, by selected characteristics: United States, 2006	79
IX.	Crude percentages (with standard errors) of persons under 18 years of age who were receiving special education or early intervention services, by selected characteristics: United States, 2006	81
X.	Crude annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by selected characteristics: United States, 2006	83
XI.	Crude annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by external cause and selected characteristics: United States, 2006	85
XII.	Crude annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by activity engaged in at the time of the episode and selected characteristics: United States, 2006	87
XIII.	Crude annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by place of occurrence and selected characteristics: United States, 2006	89
XIV.	Crude percentages (with standard errors) of persons who did not receive medical care or who delayed medical care in the past year due to cost, by selected characteristics: United States, 2006	92
XV.	Crude percent distributions (with standard errors) of number of overnight hospital stays during the past 12 months, by selected characteristics: United States, 2006	94
XVI.	Crude percent distributions (with standard errors) of type of health insurance coverage for persons under age 65 years and for persons 65 years of age and over, by selected characteristics: United States, 2006	96
XVII.	Crude percent distributions (with standard errors) of any period without health insurance coverage during the past 12 months and percentages (with standard errors) of persons who were without coverage for 6 months or less or 7–12 months, among currently insured persons under age 65 years, by selected characteristics: United States, 2006	99
XVIII.	Crude percent distributions (with standard errors) of length of time since last had health insurance coverage among currently uninsured persons under age 65 years, by selected characteristics: United States, 2006	101
XIX.	Crude percentages (with standard errors) of currently uninsured persons under age 65 years, by selected reasons for no health insurance coverage and selected characteristics: United States, 2006	103

Objectives

This report presents both age-adjusted and unadjusted health statistics from the 2006 National Health Interview Survey (NHIS) for the civilian noninstitutionalized population of the United States, classified by sex, age, race, Hispanic or Latino origin and race, education, family income, poverty status, health insurance coverage (where appropriate), place of residence, and region of residence. The topics covered are respondent-assessed health status, limitations in activities, special education or early intervention services, injury and poisoning episodes, health care access and utilization, and health insurance coverage.

Source of Data

NHIS is a household, multistage probability sample survey conducted annually by interviewers of the U.S. Census Bureau for the Centers for Disease Control and Prevention's National Center for Health Statistics. In 2006, household interviews were completed for 75,716 persons living in 29,204 households, reflecting a household response rate of 87.3%.

Selected Highlights

Nearly 7 in 10 persons were in excellent or very good health in 2006. About 36 million persons (12%) were limited in their usual activities due to one or more chronic health conditions. About 4 million persons (2%) required the help of another person with activities of daily living, and about 8 million persons (4%) required the help of another person with instrumental activities of daily living. About 6% of children received special education or early intervention services. Among persons under age 65 years, about 43 million (17%) did not have any health insurance coverage. The most common reason for lacking health insurance was cost, followed by a change in employment.

Summary Health Statistics for the U.S. Population: National Health Interview Survey, 2006

by *Patricia F. Adams, Jacqueline Wilson Lucas, M.P.H., and Patricia M. Barnes, M.A., Division of Health Interview Statistics*

Introduction

This report is one in a set of reports summarizing data from the 2006 National Health Interview Survey (NHIS), a multipurpose health survey conducted by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS). This report provides national estimates for a broad range of health measures for the U.S. civilian noninstitutionalized population. Two other reports in this year's set provide data on health measures for children and for adults (1,2). These three data reports are published for each year of NHIS (3–5), and they replace the annual, one-volume Current Estimates series (6).

Estimates are presented here for respondent-assessed health status, limitations in activities, special education or early intervention services, injury and poisoning episodes, health care access and utilization, and health insurance coverage. They are derived from the Family Core component of the annual NHIS Basic Module. These estimates are shown in [Tables 1–25](#) for various subgroups of the population, including those defined by sex, age, race, Hispanic or Latino origin and race, educational attainment for persons aged 25 years and over, family income, poverty status, health

insurance coverage, place of residence, and region of residence. Estimates for other characteristics of special relevance are also included, where appropriate. [Appendix I](#) contains brief technical notes including information about age adjustment and unknown values ([Tables I–IV](#)). [Appendix II](#) contains definitions of terms used in this report, and [Appendix III](#) contains tables of unadjusted estimates ([Tables V–XIX](#)).

NHIS has been an important source of information about health and health care in the United States since it was first conducted in 1957. Given the ever-changing nature of the U.S. population, the NHIS questionnaire has been revised every 10–15 years, with the latest revision occurring in 1997. The first design changes were introduced in 1973, and the first procedural changes in 1975 (7). In 1982, the NHIS questionnaire and data preparation procedures of the survey were extensively revised. The basic concepts of NHIS changed in some cases, and in other cases the concepts were measured in a different way. A more complete explanation of the 1982 changes is in [Appendix IV](#) of [Series 10, No. 150](#) (8). In 1985, a new sample design for NHIS and a different method of presenting sampling errors were introduced (9,10). In 1995, another change in the sample design was introduced, including the oversampling of black and Hispanic persons (11).

The authors would like to thank John R. Pleis of DAQAB/DHIS/NCHS/CDC for his expert programming advice in the preparation of the tables for this report.

In 1997, the NHIS questionnaire was substantially revised and the means of administration was changed to computer-assisted personal interviewing. This new design improved the ability of NHIS to provide important health information. However, comparisons of data from 1997–2006 to data from 1996 and earlier years should not be undertaken without a careful examination of the changes across survey instruments (6,8,10).

In response to the changing demographics of the U.S. population, in 1997 the Office of Management and Budget (OMB) issued new standards for collecting data on race and Hispanic or Latino origin (12). Most notably, the new standards allow respondents to the census and federal surveys to indicate more than one group in answering questions on race. Additionally, the category “Asian or Pacific Islander” is now split into two distinct categories, “Asian” and “Native Hawaiian or Other Pacific Islander” (NHOPI), for data collection purposes. Although NHIS had allowed respondents to choose more than one race group for many years, NHIS became fully compliant with all the new race and ethnicity standards with the fielding of the 1999 survey. The tables in this report reflect these new standards. The text in this report uses shorter versions of the new OMB race and Hispanic or Latino origin terms for conciseness, but the tables use the complete terms. For example, the category “Not Hispanic or Latino, black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text. Although the tables contain information for persons of two or more races, the “Selected Highlights” section focuses on persons reporting one race.

As has been mentioned previously, the sample for the NHIS is redesigned and redrawn about every 10 years to better measure the changing U.S. population and to meet new survey objectives. A new sample design for the NHIS was implemented in 2006. The fundamental structure of the new 2006 NHIS sample design is very similar to the previous 1995–2005 NHIS sample design, including state-level stratification. The new sample design

reduced the NHIS sample size by about 13%, compared with the 1995–2005 NHIS. Oversampling of the black and Hispanic populations has been retained in 2006 to allow for more precise estimation of health characteristics in these growing minority populations. The new sample design also oversamples the Asian population. In addition, the sample adult selection process has been revised so that when black, Hispanic, or Asian persons aged 65 or older are present, they have an increased chance of being selected as the sample adult.

Additionally, beginning in the 2003 NHIS, editing procedures were changed to maintain consistency with the U.S. Census Bureau procedures for collecting and editing data on race and ethnicity. As a result of these changes, in cases where “other race” is mentioned along with one or more OMB race groups, the “other race” response is dropped, and the OMB race group information is retained on the NHIS data file. In cases where “other race” was the only race response, it is treated as missing and the race is imputed. Although this change has resulted in an increase in the number of persons in the OMB race category “white” because this is numerically the largest group, the change is not expected to have a substantial effect on the estimates in this report. More information about the race/ethnicity editing procedures used by the U.S. Census Bureau can be found at the following website:

<http://www.census.gov/popest/archives/files/MRSF-01-US1.pdf>.

Since 2004, imputation has been performed for injury and poisoning episodes for which the respondent did not provide sufficient information to determine a month, day, and year of occurrence. Imputation was done so that for all episodes it would be possible to calculate a specific elapsed time in days between the date of the injury or poisoning episode and the date the injury or poisoning questions were asked.

For further details about changes to the injury and poisoning questions and analytic methods, see the “Methods” section and Appendix I of the 2004 Summary Health Statistics report for the U.S. Population (13).

Methods

Data Source

The main objective of the NHIS is to monitor the health of the U.S. population through the collection and analysis of data on a broad range of health topics. The target population for NHIS is the civilian noninstitutionalized population of the United States. Persons excluded are patients in long-term care institutions (e.g., nursing homes; hospitals for the chronically ill, disabled, or retarded; and wards for abused/neglected children); correctional facilities (e.g., prisons or jails, juvenile detention centers, or halfway houses); active duty Armed Forces personnel (although their civilian family members are included); and U.S. nationals living in foreign countries. Each year, a representative sample of households across the country is selected for NHIS, using a multistage cluster sample design. Details on sample design can be found in Design and Estimation for the National Health Interview Survey, 1995–2004 (11). Trained interviewers from the U.S. Census Bureau visit each selected household and administer NHIS in person. Detailed interviewer instructions can be found in the NHIS *Field Representative’s Manual* (14).

The annual NHIS questionnaire, now called the Basic Module or Core, consists of three main components: the Family Core, the Sample Adult Core, and the Sample Child Core. The Family Core, the source of data for this report, collects information for all family members regarding household composition and sociodemographic characteristics, along with basic indicators of health status, limitation in activities, and utilization of health care services. All members of the household 17 years of age and over who are at home at the time of the interview are invited to participate and respond for themselves. For children and adults not available during the interview, information is provided by a knowledgeable adult family member (18 years of age or over) residing in the household. Although considerable

effort is made to ensure accurate reporting, the information from both proxies and self-respondents may be inaccurate because the respondent is unaware of relevant information, has forgotten it, does not wish to reveal it to an interviewer, or does not understand the intended meaning of the question.

The Sample Adult and Sample Child Cores obtain additional information on the health of one randomly selected adult and child in the family. Sample adults respond for themselves, and a knowledgeable adult in the family provides proxy responses for the sample child. In rare instances when the sample adult is mentally or physically incapable of responding, proxy responses are accepted for this person.

The interviewed sample for 2006 consisted of 29,204 households, which yielded 75,716 persons in 29,868 families. The total noninterview rate was 12.7%. Of this 12.7%, 8.4% was the result of respondent refusal and unacceptable partial interviews. The remainder was primarily the result of failure to locate an eligible respondent at home after repeated calls (15).

Estimation Procedures

The estimates presented in this report are weighted, using the Person Record Weight, to provide national health estimates. For each health measure, both weighted frequencies and percentages (or rates) for all persons and for various subgroups of the population are shown. All counts are expressed in thousands. Counts for persons of unknown status with respect to each health characteristic of interest are not shown separately in the tables, nor are they included in the calculation of percentages (or rates), to make the presentation of the data more straightforward. For all health measures in this report, the percentages with unknown values are typically small (generally 1% or less) and are shown in [Appendix I](#). Nevertheless, these unknown cases are included in the total population counts shown in selected tables. Therefore, it should be noted that

readers may obtain slightly different percentages than those shown in the tables if they elect to calculate percentages based on the frequencies and population counts presented in the tables.

Additionally, some of the sociodemographic variables used to delineate various subgroups of the population have unknown values. For most of these variables, the percentage unknown is small. However, in the case of family income, there is no income information for about 9% of respondents in the 2006 survey, and 21% of respondents stated that their combined family income was either less than \$20,000 or \$20,000 or more without providing additional detail. As a result, poverty status, which is based on family income, has a high nonresponse rate (16). Missing data on family income and personal earnings in the NHIS have been imputed by NCHS analysts using multiple-imputation methodology. Five ASCII data sets containing imputed values for the survey year and additional information about the imputed income files can be found at <http://www.cdc.gov/nchs/nhis.htm>. However, income and poverty estimates in this publication are based only on reported income and may differ from other measures that are based on imputed income data (which were not available when this report was prepared). Health estimates for persons with unknown sociodemographic characteristics are not shown in the tables. See [Appendix I](#) for more information on the extent of unknown data for income and poverty status.

Injuries and Poisonings

Since 2004, imputation has been performed for injury and poisoning episodes for which the respondent did not provide sufficient information to determine a month, day, and year of occurrence. Imputation was done so that for all episodes it was possible to calculate a specific elapsed time in days between the date of the injury or poisoning episode and the date the injury or poisoning questions were asked.

From 1997–2003, injury and poisoning estimates were calculated using the full 3 month recall period to which the questions referred. A study by Warner, et al. (17), showed that as the recall period increases, the annualized number of injuries and poisonings reported decreases because respondents tend to forget less serious injuries and poisonings. Based on recommendations from this study, beginning in 2004 injury and poisoning estimates have been calculated using only those injuries and poisonings that occurred 5 weeks or less before the date the injury and poisoning questions were asked.

Due to changes in the injury and poisoning section, imputation of unknown dates of injury and poisoning episodes, and the use of a 5-week period rather than a 3-month recall period to calculate annualized estimates, estimates for 2004 and subsequent years are not comparable to estimates from prior years. For further details about changes to the injury and poisoning questions and analytic methods, effective with 2004, see the “Methods” section and Appendix I of the 2004 Summary Health Statistics report for the U.S. Population (13).

Transition to the 2000 Census-Based Weights

In Summary Health Statistics reports prior to 2003, the weights for the NHIS data were derived from 1990 census-based postcensal population estimates. Beginning with the 2003 data, NHIS transitioned to weights derived from the 2000 census-based population estimates. The impact of this transition was assessed for the 2002 NHIS by comparing estimates for selected health characteristics using the 1990 census-based weights with those using the 2000 census-based weights. Although the effect of new population controls on survey estimates differed by type of health characteristic, the effect of this change on health characteristic rates was small, but was somewhat larger for weighted frequencies (18).

Age Adjustment

Beginning with the 2002 report, estimates are provided in two sets of tables. The first set (Tables 1–25) was age adjusted to the projected 2000 U.S. population as the standard population. Age adjustment was used to permit comparison among various sociodemographic subgroups that may have different age structures (19,20). Unless otherwise noted, the age groups used for age adjustment are the same age groups presented in the tables. The age-adjusted estimates in this report may not match age-adjusted estimates for the same health characteristic in other reports if different age groups were used for age adjustment. Appendix III provides Tables V–XIX with unadjusted estimates so that readers may compare current estimates with those published in the 1997–2001 Summary Health Statistics reports and may see the effects of age adjustment on the 2006 estimates (see Appendix I for details on age adjustment). Frequency tables have been removed from the unadjusted set of tables in Appendix III to eliminate redundancy in the report.

Change in MSA Definitions

Beginning in 2006, the 2003 OMB standards on criteria for designating MSAs, based on Census 2000, are used for NHIS data. Because the 2003 criteria differ from the 1993 criteria in substantial ways, analysts who compare NHIS frequencies across this transition in OMB standards need to recognize that some of the differences may be due to change in the definitions of metropolitan areas. Refer to Appendix II for more detail about the MSA definition.

Sample Reductions in the 2006 National Health Interview Survey

As in 2002–2004, the 2006 National Health Interview Survey (NHIS) was faced with a budget shortfall. As a result, NCHS and the Division of Health Interview Statistics (DHIS) decided to

reduce the size of the 2006 NHIS sample. The goal of the 2006 sample cuts was strictly monetary savings. The NHIS sample was reduced by approximately 50% during July–September 2006. Overall, about 13% of the households in the 2006 NHIS sample were deleted from interviewers' assignments. This cutback was in addition to the previously mentioned 13% reduction due to the new sample design in 2006.

Limitations of the Data

As mentioned above, the redesigned NHIS is quite different in content, format, and mode of data collection from earlier versions of the survey. These changes can make it complex to compare 1997–2006 NHIS estimates with those of earlier years. The 2006 NHIS is based on a different sample design, including the oversampling of all Asians as well as Hispanic, black, or Asian sample adults at least 65 years of age, and a permanent sample reduction of 13%, compared with the 1997–2005 NHIS. The change in sample design should be considered when comparing estimates from the 2006 NHIS with those from earlier years. Beginning in 2003, NHIS uses weights derived from the 2000 census-based population estimates. Analysts who compare NHIS frequencies across this transition (e.g., comparing 2006 to 2002) need to recognize that some of the observed differences may be due to the change in the population estimates. Unadjusted percentage estimates shown in the Appendix III tables may be compared with those published in Summary Health Statistics reports of 1997–2001, which did not contain age-adjusted estimates. Age-adjusted estimates in this report should not be compared with earlier unadjusted estimates unless it can be demonstrated that the effect of age adjustment is minimal.

It is important to note that frequencies are underestimates due to item nonresponse and unknowns, both of which are excluded from the tables (with the exception of the “All persons” or “Total” columns shown in each

table). See Appendix I for more information about the number of unknowns with respect to each health characteristic.

Interpretation of estimates should only be made after reviewing Appendix I, which contains important information about the methods used to obtain the estimates, changes in the survey instrument, and measurement issues that are currently being evaluated.

Variance Estimation and Significance Testing

NHIS data are based on a sample of the population and are, therefore, subject to sampling error. Standard errors are reported to indicate the reliability of the estimates. Estimates and standard errors were calculated using SUDAAN software, which takes into account the complex sampling design of NHIS. The Taylor series linearization method was used for variance estimation in SUDAAN (21).

Standard errors are shown for all rates and percentages in the tables (but not for the frequencies). Estimates with a relative standard error (RSE) greater than 30% and less than or equal to 50% are indicated with an asterisk (*) and should be used with caution as they do not meet the standard of reliability or precision. Estimates with a RSE greater than 50% are indicated with a dagger (†) and are not shown. The statistical significance of differences between point estimates was evaluated using two-sided *t*-tests at the 0.05 level and assuming independence. Terms such as “greater than,” “less than,” “more likely,” “less likely,” “compared with,” or “opposed to” indicate a significant difference between estimates, whereas “similar,” “no difference,” or “comparable” indicate that the estimates are not significantly different. A lack of commentary about any two estimates should not be interpreted to mean that a *t*-test was performed and the difference found to be not significant. Furthermore, these tests did not take multiple comparisons into account.

Further Information

Data users can obtain the latest information about NHIS from the NCHS website: <http://www.cdc.gov/nchs/nhis.htm>.

This website features downloadable public-use data and documentation for National Health Interview Surveys, as well as important information about any modifications or updates to the data or documentation.

Researchers may also wish to join the NHIS electronic mailing list. To do so, go to <http://www.cdc.gov/subscribe.html>. Fill in the appropriate information and click the “National Health Interview Survey (NHIS) researchers” box, followed by the “subscribe” button at the bottom of the page. The listserve is made up of approximately 4,000 NHIS data users located around the world who receive e-news about NHIS surveys (e.g., new releases of data or modifications to existing data), publications, conferences, and workshops.

Selected Highlights

In this section, brief, bulleted summaries of the estimates shown in [Tables 1–25](#) are presented.

Estimates were age adjusted by the direct method using the 2000 U.S. population as the standard population. In most cases, the age groups used to adjust estimates are the same age groups presented in the tables (see table notes for age-adjustment groups). All estimates were calculated using the Person Record Weight variable, which is calibrated by NCHS staff to produce numbers consistent with the population estimates of the United States by age, sex, and race and ethnicity, based on projections from the 2000 U.S. Census.

Respondent-Assessed Health Status ([Tables 1,2](#))

- Nearly 7 in 10 persons were in excellent or very good health, and fewer than 1 in 10 persons were in fair or poor health.
- More than one in four adults aged 75 years and over were in fair or poor health.
- White persons (36%) and Asian persons (39%) were more likely than black persons (30%) to be in excellent health.
- The percentage of persons in excellent health increased with increased levels of education and family income.
- College graduates (41%) were more than twice as likely as persons who had not graduated from high school (17%) to be in excellent health.
- Persons with family incomes of \$75,000 or more (47%) were almost twice as likely as those with family incomes of less than \$20,000 (25%) to be in excellent health.
- Among persons under age 65 years, those with private health insurance were more likely than persons with other types of health insurance or persons who were uninsured to be in excellent health.
- Persons who lived in a metropolitan statistical area (MSA) were more likely than persons who did not live in an MSA to be in excellent health.

Limitation in Usual Activities ([Tables 3,4](#))

- About 34.4 million persons (12%) were limited in their usual activities due to one or more chronic health conditions.
- Prevalence of limitation in usual activities due to one or more chronic conditions increased with age: 7% of children under age 12 years had an activity limitation compared with 16% of adults aged 45–64 years and 42% of adults aged 75 years and over.
- Asian persons were about one-half as likely as white or black persons to be limited in their usual activities

due to one or more chronic conditions.

- Persons with the least education and the lowest family incomes were the most likely to have an activity limitation.
- Persons under age 65 years who had private health insurance, as well as those who were uninsured, were less likely than persons who had Medicaid or some other type of health insurance to have an activity limitation.
- Persons aged 65 years and over with both Medicare and Medicaid were more likely to have an activity limitation than persons with private health insurance, Medicare only, or some other type of health care coverage, or those who were uninsured.

Limitation in Activities of Daily Living (ADLs) and Instrumental Activities of Daily Living (IADLs) ([Table 5](#))

- About 3.9 million adults (2%) required the help of another person with ADLs such as eating, dressing, or bathing, and 7.8 million (4%) required help with IADLs such as household chores or shopping.
- Among adults aged 75 years and over, about 9% required the help of another person with ADLs, and 18% required help with IADLs.
- Poor adults were three to four times as likely as those who were not poor to require help with ADLs and IADLs.
- Persons under age 65 years who had private health insurance, as well as those who were uninsured, were less likely to need help with ADLs or IADLs than were persons who had Medicaid or some other type of health insurance.
- Among persons aged 65 years and over, those who had both Medicaid and Medicare were more likely than those with private health insurance, Medicare only, or some other type of health care coverage to need help with ADLs and IADLs.

Limitation in Work Activity (Table 6)

- About 11.1 million adults (6%) aged 18–69 years were unable to work due to health problems, and 6.3 million (3%) were limited in the kind or amount of work they could do because of their health.
- Persons aged 45–64 years and 65–69 years were about three times as likely to be unable to work due to health reasons as persons aged 18–44 years.
- About 2% of Asian adults aged 18–69 years were unable to work for health reasons compared with 5% of white adults and 8% of black adults.
- Persons with the least education and the lowest incomes were the most likely to be unable to work due to health problems.
- Persons under age 65 years who had private health insurance were less likely to be limited in their work activity than persons who had Medicaid or other types of health insurance.
- Poor non-Hispanic white persons (22%) and poor non-Hispanic black persons (18%) were more likely than poor Hispanic persons (13%) to be unable to work.

Special Education or Early Intervention Services (Table 7)

- About 4.5 million children under age 18 years were receiving special education or early intervention services in 2006.
- Overall, 6% of U.S. children received special education or early intervention services, with boys being almost twice as likely as girls to receive such services.
- Children in poor families (9%) and near-poor families (8%) were more likely than children in not-poor families (6%) to receive special education or early intervention services.

- Children covered by Medicaid were more likely than children with private health insurance or children without any health insurance to receive special education or early intervention services.
- Children in the Northeast were more likely than children in the Midwest, South, or West to receive special education or early intervention services.
- Non-Hispanic white children who were poor or near poor were more likely than those who were not poor to receive special education or early intervention services.
- Poor Hispanic children were less likely than poor non-Hispanic white children to receive special education or early intervention services.

Incidence of Medically Consulted Injury and Poisoning Episodes (Table 8)

- In 2006, there were 33.3 million medically consulted injury and poisoning episodes among the U.S. civilian noninstitutionalized population, a rate of 114 episodes per 1,000 population per year.
- The rate of medically consulted injury and poisoning episodes among white persons (122 per 1,000 population) was more than three times the rate for Asian persons (38 per 1,000 population).
- The rate of medically consulted injury and poisoning episodes among non-Hispanic persons (121 per 1,000 population) was higher than the rate for Hispanic persons (68 per 1,000 population).
- Persons who were in fair health had higher rates of medically consulted injury and poisoning episodes than persons who had excellent health.

Causes of Injury and Poisoning Episodes (Tables 9,10)

- The three leading external causes of medically consulted injury episodes were falls (13.1 million episodes in 2006), overexertion (4.6 million episodes), and being struck by a person or an object (3.9 million episodes).
- The rate of injury resulting from being struck by a person or object was similar for males and females.
- For non-Hispanic white persons, the rate of injury due to a fall was about two times the rate for Hispanic persons and non-Hispanic black persons.

Activity at Time of Injury and Poisoning Episodes (Tables 11,12)

- About 8.3 million medically consulted injury and poisoning episodes occurred while engaging in nonsport leisure activities, 4.7 million episodes occurred while working at a paid job, and 4.8 million episodes occurred while participating in sports.
- The rates of medically consulted injury and poisoning episodes that occurred while working at a paid job or participating in sports was about twice as high for males as for females.
- The rate of medically consulted injury and poisoning episodes that occurred while engaging in nonsport leisure activities was higher for non-Hispanic white persons than for non-Hispanic black persons.
- The rate of medically consulted injury and poisoning episodes that occurred while working at a paid job was about twice as high for persons not living in a metropolitan statistical area (MSA) as for persons living in a large MSA.

Place of Occurrence of Injury and Poisoning Episodes (Tables 13,14)

- In 2006, nearly one-half of the 33.3 million medically consulted injury and poisoning episodes occurred in or around the home, with 10.2 million episodes occurring inside and 6.5 million occurring outside the home.
- Recreation areas (4.1 million episodes) and streets and highways (3.8 million episodes) were the third and fourth most common locations for medically consulted injuries and poisonings.
- The rate of medically consulted injury and poisoning episodes occurring inside the home was about twice as high for females as for males, whereas the rate of medically consulted injury and poisoning episodes occurring outside the home was higher for males than for females.
- The rate of medically consulted injury and poisoning episodes occurring inside the home was higher for persons aged 75 years and over compared with persons under 12 years, 18–44 years, 45–64 years, and 65–74 years.
- The rate of medically consulted injury and poisoning episodes occurring inside the home was higher for non-Hispanic persons than for Hispanic persons.
- The rate of medically consulted injury and poisoning episodes occurring in recreation areas was about twice as high for persons in the Midwest compared with persons in the South and West.

Access to Medical Care (Table 15)

- About 23.0 million persons (8%) delayed medical care in the last year due to cost, and another 16.9 million (6%) did not receive needed care due to cost of care.
- Adults aged 18–64 years were more likely than older adults and children to delay or not receive medical care due to cost.

- Persons with the least education were more than three times as likely as persons with the most education to have not received needed medical care due to cost, and they were about twice as likely to have delayed care for this reason.
- Persons in the lowest income group were about four times as likely as persons in the highest income group to delay medical care due to cost and about eight times as likely to not get needed medical care.
- Persons under age 65 years who were uninsured were more likely than persons who were insured to delay or not receive needed medical care due to cost.
- Persons who were in fair or poor health were four to five times as likely as persons who were in excellent or very good health to delay or not receive needed medical care due to cost.

Overnight Hospital Stays (Tables 16,17)

- About 18.2 million persons (6%) stayed overnight in the hospital once in the past 12 months, about 3.2 million persons (1%) stayed overnight on two occasions, and about 2 million persons had three or more overnight hospital stays during the year.
- Persons aged 65 years and over were more likely than younger persons to have stayed in the hospital overnight in the past 12 months.
- Persons with the lowest incomes were more likely to have stayed overnight in the hospital than persons with higher incomes.
- Among persons under age 65 years, those with Medicaid were nearly twice as likely as persons who had private health insurance and those who were uninsured to have stayed overnight in the hospital once in the past year.

Type of Health Insurance Coverage (Tables 18,19)

- Among persons under age 65 years, 169 million (66%) had private health insurance, 35 million (14%) had Medicaid, and 43 million (17%) were uninsured.
- Children under age 12 years were the most likely to have Medicaid coverage compared with persons in other age groups, and adults aged 18–44 years were the most likely to be uninsured.
- Among persons under age 65 years, white persons and Asian persons were more likely than black persons or American Indian or Alaska Native persons to have private health insurance coverage.
- Hispanic persons under age 65 years (36%) were about 2 1/2 times as likely as non-Hispanic persons (14%) under age 65 years to be uninsured.
- Among poor persons under age 65 years, about 4 in 10 had Medicaid coverage and about 3 in 10 were uninsured.
- Persons under age 65 years who were in fair or poor health were more than three times as likely as persons under age 65 years who were in excellent or very good health to have Medicaid coverage.
- Health insurance coverage is nearly universal among persons aged 65 years and over, although the types of coverage vary by demographic characteristics.
- Among the 36 million adults aged 65 years and over in 2006, 20.2 million (57%) had private health insurance, and 10.3 million (29%) had Medicare alone.
- About 310,000 persons aged 65 years and over (1%) were uninsured in 2006.
- Among persons aged 65 years and over who were poor, 32% were covered by Medicaid and Medicare combined, 38% by Medicare only, and 22% by private health insurance.

- Among persons aged 65 years and over who were not poor, 69% were covered by private health insurance, and 20% were covered by Medicare only.

Periods Without Health Insurance Coverage Among Currently Insured Persons Under Age 65 Years (Tables 20,21)

- Among persons under age 65 years who were currently covered by health insurance, approximately 200 million (95%) had health insurance continuously over the preceding 12-month period.
- Among currently insured persons under age 65 years, about 5% had been without insurance at some time in the past year—most of these for 6 months or less.
- Currently insured adults aged 18–44 years were more likely than children under 12 years and adults aged 45–64 years to have experienced a period without health insurance in the past year.
- Poor and near poor persons under age 65 years who had health insurance were more than twice as likely as not poor persons to have been without health insurance at some time in the past year.

Length of Time Since Last Covered by Health Insurance Among Currently Uninsured Persons Under Age 65 Years (Tables 22,23)

- Among persons under age 65 years who were uninsured at the time of the interview, 12 million (29%) had been without health insurance for more than 36 months, and 10 million (25%) had never had coverage.
- Uninsured males (28%) were more likely than uninsured females (22%) to have never had health insurance.
- Uninsured children under age 12 years were the most likely to have

been without insurance for 6 months or less compared with older persons.

- Uninsured persons aged 45–64 years were the most likely to have been without health insurance for more than 36 months compared with younger persons.
- Among persons who were not covered by health insurance, Hispanic persons (50%) were about four times as likely as non-Hispanic persons (12%) to have never had health insurance coverage.
- Uninsured persons living in the West were more likely than uninsured persons living in the Northeast, Midwest, or South to have never had health insurance.

Reasons for No Health Insurance Coverage Among Currently Uninsured Persons Under Age 65 Years (Tables 24,25)

- Among persons under age 65 years who were without health insurance coverage, 20.1 million persons (50%) lacked coverage due to cost, and 9.3 million (24%) lacked coverage due to a change in employment.
- Uninsured females were about twice as likely as uninsured males to not have coverage due to a change in marital status or death of a parent.
- Uninsured children under 12 years (25%) were about four times as likely as adults aged 45–64 years (6%) to not have coverage due to cessation of Medicaid or other public coverage.
- Uninsured non-Hispanic persons (30%) were more than twice as likely as Hispanic persons (12%) to be without health insurance coverage due to loss of a job or a change in employment.
- Uninsured persons with a high school diploma or higher education were more than 1 1/2 times as likely as persons who had not graduated from high school to be without health insurance coverage due to loss of a job or a change in employment.

Table 1. Frequency distributions of respondent-assessed health status, by selected characteristics: United States, 2006—Con.

Selected characteristic	All persons	Respondent-assessed health status ¹				
		Excellent	Very good	Good	Fair	Poor
Place of residence ¹²		Number in thousands ²				
Large MSA	153,855	56,710	46,611	36,537	10,341	2,957
Small MSA	90,562	31,179	28,554	22,492	6,331	1,852
Not in MSA	49,339	14,924	15,083	12,980	4,725	1,562
Region						
Northeast	53,576	19,751	16,564	12,577	3,729	798
Midwest	67,003	22,356	21,365	16,697	4,791	1,347
South	108,950	37,325	32,985	26,888	8,620	2,981
West	64,227	23,379	19,334	15,847	4,257	1,244
Hispanic or Latino origin, race, and sex						
Hispanic or Latino, male	22,310	7,398	6,468	6,435	1,639	341
Hispanic or Latina, female	21,168	6,710	5,934	6,277	1,767	446
Not Hispanic or Latino:						
White, single race, male	95,855	35,562	30,292	21,545	6,129	2,034
White, single race, female	99,973	34,725	32,429	22,903	7,311	2,220
Black or African American, single race, male	16,755	5,618	4,455	4,780	1,459	413
Black or African American, single race, female	19,336	5,648	5,344	5,598	2,081	610
Hispanic or Latino origin, race, and poverty status						
Hispanic or Latino:						
Poor	7,886	1,919	1,908	2,870	894	292
Near poor	9,029	2,923	2,467	2,700	801	131
Not poor	12,716	5,160	3,844	2,874	716	115
Not Hispanic or Latino:						
White, single race:						
Poor	12,901	3,565	3,503	3,419	1,715	691
Near poor	23,513	6,880	6,651	6,195	2,703	1,076
Not poor	104,358	41,787	35,458	20,658	5,134	1,234
Black or African American, single race:						
Poor	6,487	2,027	1,402	1,897	856	301
Near poor	6,155	1,765	1,720	1,703	755	212
Not poor	11,520	4,336	3,397	2,832	810	131

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Respondent-assessed health status is based on the question, "Would you say [person's] health in general is excellent, very good, good, fair, or poor?"

²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons" column.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 2. Age-adjusted percent distributions (with standard errors) of respondent-assessed health status, by selected characteristics: United States, 2006

Selected characteristic	Total	Respondent-assessed health status ¹				
		Excellent	Very good	Good	Fair	Poor
		Percent distribution ² (standard error)				
Total ³ (age-adjusted)	100.0	35.5 (0.35)	30.8 (0.30)	24.4 (0.28)	7.2 (0.14)	2.1 (0.07)

Not poor	100.0	36.6 (1.21)	28.6 (1.11)	25.3 (1.01)	8.0 (0.61)	1.5 (0.31)

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Respondent-assessed health status is based on the question, "Would you say [person's] health in general is excellent, very good, good, fair, or poor?"

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population using six age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table V in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Not poor	104,358	94,070	10,240	9,966
Black or African American, single race:				
Poor	6,487	5,235	1,228	1,201
Near poor	6,155	5,102	1,048	1,027
Not poor	11,520	10,622	893	845

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

¹Limitation in usual activities is based on a series of questions concerning: limitation(s) in a person's ability to engage in work, school, play, or other activities for health reasons; the specific conditions causing the limitation(s); and the duration of these conditions. Conditions lasting more than 3 months are classified as chronic; selected conditions (e.g., arthritis, diabetes, cancer, heart conditions) are considered chronic regardless of duration.

²The category "Limited due to 1 or more chronic conditions" is a subset of the category "Limited."

³Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons" column.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 4. Age-adjusted percent distributions (with standard errors) of limitation in usual activities, and percentages (with standard errors) of persons limited due to 1 or more chronic conditions, by selected characteristics: United States, 2006

Selected characteristic	Total	Limitation in usual activities ¹		
		Not limited	Limited	Limited due to 1 or more chronic conditions ²

Not poor	100.0	90.2 (0.65)	9.8 (0.65)	9.4 (0.63)

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

¹Limitation in usual activities is based on a series of questions concerning: limitation(s) in a person's ability to engage in work, school, play, or other activities for health reasons; the specific conditions causing the limitation(s); and the duration of these condition(s). Conditions lasting more than 3 months are classified as chronic; selected conditions (e.g., arthritis, diabetes, cancer, heart conditions) are considered chronic regardless of duration.

²The category "Limited due to 1 or more chronic conditions" is a subset of the category "Limited."

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

⁴Percentages may not add to totals because of rounding.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁶Estimates for age groups are not age adjusted.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population using six age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table VI in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 5. Frequencies and age-adjusted percentages (with standard errors) of persons having limitation in activities of daily living and instrumental activities of daily living among persons 18 years of age and over, by selected characteristics: United States, 2006

Selected characteristic	All persons 18 years of age and over	Limitation in ADLs ¹ and IADLs ²

* Estimates preceded by an asterisk have a relative standard error of greater than 30% but less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error of greater than 50% are indicated with a dagger, but are not shown.

¹ADL is activities of daily living. Limitation in ADL is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons with PERSONAL CARE NEEDS, such as eating, bathing, dressing, or getting around inside the home?"²IADL is instrumental activities of daily living. Limitation in IADL is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons in handling ROUTINE NEEDS, such as everyday household chores, doing necessary business, shopping, or getting around for other purposes?"³Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons 18 years of age and over" column.⁴Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.⁶Estimates for age groups are not age adjusted.⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.¹⁰Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.¹¹GED is General Educational Development high school equivalency diploma.¹²The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using two age groups (18–44 years and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table VII in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 6. Frequency distributions and age-adjusted percent distributions (with standard errors) of limitation in work activity due to health problems among persons 18–69 years of age, by selected characteristics: United States, 2006

. . . Category not applicable.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% but less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Limitation in work activity is based on the questions, “Does a physical, mental, or emotional problem NOW keep [family members 18 years of age or older] from working at a job or business?” and for persons not kept from working, “Are [family members 18 years of age and older] limited in the kind or amount of work they can do because of a physical, mental, or emotional problem?”²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the “All persons 18–69 years of age” column.³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.⁵Estimates for age groups are not age adjusted.⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.⁷The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately.⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.⁹Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using three age groups: 25–44 years, 45–64 years, and 65–69 years.¹⁰GED is General Educational Development high school equivalency diploma.¹¹The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.¹²Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using two age groups (18–44 years and 45–64 years) for persons under age 65. Estimates for persons aged 65 years and over are not age adjusted.¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population using three age groups: 18–44 years, 45–64 years, and 65–69 years. For crude percentages, refer to Table VIII in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

. . . Category not applicable.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Receiving special education or early intervention services is based on the question, "Do any of the following [family members under 18 years of age] receive special education or Early Intervention Services?"

²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons under 18 years" column.

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁵Estimates for age groups are not age adjusted.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are age adjusted using the projected 2000 U.S. population as the standard population using two age groups: 0–11 years and 12–17 years. For crude percentages, refer to Table IX in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

. . . Category not applicable.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Injury and poisoning episodes are based on the questions, “Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?” and “Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?” Counts and rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the “All persons” column.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population using six age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude rates, refer to Table X in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 9. Annualized frequencies of medically consulted injury and poisoning episodes, by external cause and selected characteristics: United States, 2006

Selected characteristic	External cause of injury or poisoning episode ¹						Poisoning
	Fall	Struck by a person or an object	Transportation	Over-exertion	Cutting or piercing instruments	Other causes (injury) ²

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Injury and poisoning episodes are based on the questions, “Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?” and “Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?” Injury and poisoning episodes are classified according to the external cause of the episode using categories based on the International Classification of Diseases, Ninth Revision, Clinical Modification external cause codes (E codes). The category “Transportation” includes motor vehicle, bicycle, motorcycle, pedestrian, train, boat, and airplane. The category “Other” includes fire/burn/scald related, animal or insect bite, machinery, and other (not specified). The category “Poisoning” excludes food poisoning and allergic reaction. Counts of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury or poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury or poisoning episode and the date the injury or poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²“Other causes (injury)” includes unknown causes.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of the civilian noninstitutionalized population.

Table 10. Age-adjusted annualized rates (with standard errors) of medically consulted injury and poisoning episodes, by external cause and selected characteristics: United States, 2006

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Injury and poisoning episodes are based on the questions, “Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?” and “Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?” Injury and poisoning episodes are classified according to the external cause of the episode using categories based on the International Classification of Diseases, Ninth Revision, Clinical Modification external cause codes (E codes). The category “Transportation” includes motor vehicle, bicycle, motorcycle, pedestrian, train, boat, and airplane. The category “Other” includes fire/burn/scald related, animal or insect bite, machinery, and other (not specified). The category “Poisoning” excludes food poisoning and allergic reaction. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury or poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury or poisoning episode and the date the injury or poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²“Other causes (injury)” includes unknown causes.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65, and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population using six age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude rates, refer to Table XI in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

– Quantity zero.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

¹Activity at time of injury or poisoning episode is based on the question, “What activity was [person] involved in at the time of the injury/poisoning?” Respondents could indicate up to two activities. Counts of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²“Driving” includes both drivers and passengers.

³“Other” includes unpaid work such as housework, shopping, volunteer work, sleeping, resting, eating, drinking, cooking, hands-on care from another person, and other unspecified activities.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

West	7.80 (1.86)	14.69 (3.62)	12.86 (3.71)	*2.43 (1.04)	11.62 (2.78)	29.38 (5.66)	29.81 (6.11)		

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

– Quantity zero.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Activity at time of injury or poisoning episodes is based on the question, "What activity was [person] involved in at the time of the injury/poisoning?" Respondents could indicate up to two activities. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²"Driving" includes both drivers and passengers.

³"Other" includes unpaid work such as housework, shopping, volunteer work, sleeping, resting, eating, drinking, cooking, hands-on care from another person, and other unspecified activities.

⁴Unknowns were excluded from the denominator when calculating rates.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁶Estimates for age groups are not age adjusted.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because small sample sizes for other combinations.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population using six age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude rates, refer to Table XII in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

— Quantity zero.

¹Place of occurrence of injury and poisoning episodes is based on the question, "Where was [person] when the injury/poisoning happened?" Respondents could indicate up to two places. Counts of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

³In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁴The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁵Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁶Education is shown only for persons aged 25 years and over.

⁷GED is General Educational Development high school equivalency diploma.

⁸The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

⁹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁰Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹¹MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.
† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.
– Quantity zero.
¹Place of occurrence of injury and poisoning episodes is based on the question, "Where was [person] when the injury/poisoning happened?" Respondents could indicate up to two places. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.
²Unknowns were excluded from the denominator when calculating rates.
³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.
⁴Estimates for age groups are not age adjusted.
⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.
⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.
⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.
⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.
⁹GED is General Educational Development high school equivalency diploma.
¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.
¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. population as the standard population using six age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude rates, refer to Table XIII in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 15. Frequencies and age-adjusted percentages (with standard errors) of persons who did not receive medical care or who delayed medical care in the past year due to cost, by selected characteristics: United States, 2006

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

¹Did not receive medical care due to cost is based on the question, "During the past 12 months, was there any time when [person] needed medical care but did not get it because [person] could not afford it?" (Excludes dental care.)²Delayed medical care due to cost is based on the question, "During the past 12 months has [person] delayed seeking medical care because of worry about the cost?" (Excludes dental care.)³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.⁵Estimates for age groups are not age adjusted.⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.⁹Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using three age groups: 25–44 years, 45–64 years, and 65 years and over.¹⁰GED is General Educational Development high school equivalency diploma.¹¹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. population as the standard population using five age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, and 65 years and over. For crude percentages, refer to Table XIV in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 16. Frequency distributions of number of overnight hospital stays during the past 12 months, by selected characteristics: United States, 2006

Near poor	6,155	5,459	472	106	95
Not poor	11,520	10,710	645	117	40

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Number of hospital stays is based on the questions: "During the past 12 months was [person] a patient in a hospital overnight?" and "How many different times did [person] stay in any hospital overnight or longer during the past 12 months?" Hospital stays due to childbirth are included but overnight stays in an emergency room are excluded. NCHS analysts have ascertained that hospitalizations for newborns with a normal birth and for women with a normal delivery have been undercounted (see Appendix I).

²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons" column.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 17. Age-adjusted percent distributions (with standard errors) of number of overnight hospital stays during the past 12 months, by selected characteristics: United States, 2006

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Number of hospital stays is based on the questions: "During the past 12 months was [person] a patient in a hospital overnight?" and "How many different times did [person] stay in any hospital overnight or longer during the past 12 months?" Hospital stays due to childbirth are included but overnight stays in an emergency room are excluded. NCHS analysts have ascertained that hospitalizations for newborns with a normal birth and for women with a normal delivery have been undercounted (see Appendix I).

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using three age groups: 25–44 years, 45–64 years, and 65 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U. S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted to the 2000 projected U.S. standard population using four age groups (0–11 years, 12–17 years, 18–44 years, and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. population as the standard population using five age groups: 0–11 years, 12–17 years, 18–44 years, 45–64 years, and 65 years and over. For crude percentages, refer to Table XV in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

. . . Category not applicable.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Health insurance coverage is based on the question, “What kind of health insurance or health care coverage does [person] have? INCLUDE those that pay for only one type of service (nursing home care, accidents, or dental care), exclude private plans that only provide extra cash while hospitalized.” Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the “All persons under 65 years of age” column.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and current health status.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

. . . Category not applicable.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Health insurance coverage is based on the question, "What kind of health insurance or health care coverage does [person] have? INCLUDE those that pay for only one type of service (nursing home care, accidents, or dental care), exclude private plans that only provide extra cash while hospitalized." Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and current health status.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using two age groups (25–44 years and 45–64 years) for persons under age 65 and two age groups (65–74 years and 75 years and over) for persons aged 65 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, for persons under 65 years of age, estimates are age adjusted to the projected 2000 U.S. population as the standard population using four age groups: 0–11 years, 12–17 years, 18–44 years, and 45–64 years. For persons 65 years of age and over, estimates are age adjusted to the 2000 projected U.S. standard population using two age groups: 65–74 years and 75 years and over. For crude percentages, refer to Table XVI in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 20. Frequency distributions of any period without health insurance coverage during the past 12 months and frequencies of persons who were without coverage for 6 months or less or 7–12 months, among currently insured persons under age 65 years, by selected characteristics: United States, 2006

Hispanic or Latino origin, race, and poverty status					
Hispanic or Latino:					
Poor	4,262	3,974	283	169	112
Near poor	4,719	4,335	382	221	157
Not poor	9,490	8,980	498	323	173
Not Hispanic or Latino:					
White, single race:					
Poor	8,674	7,763	870	583	272
Near poor	13,631	11,914	1,692	1,210	472
Not poor	84,948	81,597	3,266	2,447	798
Black or African American, single race:					
Poor	4,588	4,281	293	199	93
Near poor	4,147	3,792	336	202	121
Not poor	9,488	8,984	495	355	137

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Any period without coverage is based on the question (asked of persons who currently had health insurance coverage), "In the PAST 12 MONTHS, was there any time when [person] did NOT have ANY health insurance or coverage?"

²Duration of period without coverage is based on the question (asked of persons who currently had health insurance coverage), "In the PAST 12 MONTHS, about how many months was [person] without coverage?"

³Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All currently insured persons under age 65" column, and unknowns for duration of noncoverage are included in the "Yes" column.

⁴Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 21. Age-adjusted percent distributions (with standard errors) of any period without health insurance coverage during the past 12 months and percentages (with standard errors) of persons who were without coverage for 6 months or less or 7–12 months, among currently insured persons under age 65 years, by selected characteristics: United States, 2006

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Any period without coverage is based on the question (asked of persons who currently had health insurance), "In the PAST 12 MONTHS, was there any time when [person] did NOT have ANY health insurance or coverage?"

²Duration of period without coverage is based on the question (asked of persons who currently had health insurance), "In the PAST 12 MONTHS, about how many months was [person] without coverage?"

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

⁴Persons having any period without health insurance coverage includes persons with unknown duration of period without coverage.

⁵Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁶Estimates for age groups are not age adjusted.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using two age groups: 25–44 years and 45–64 years.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. population using the standard population using four age groups: 0–11 years, 12–17 years, 18–44 years, and 45–64 years. For crude percentages, refer to Table XVII in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Length of time since last had health insurance coverage is based on the question (asked of persons currently without health insurance coverage), "Not including single service plans, about how long has it been since [person] last had health care coverage?"

²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All currently uninsured persons under age 65 years" column.

³Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 23. Age-adjusted percent distributions (with standard errors) of length of time since last had health insurance coverage among currently uninsured persons under age 65 years, by selected characteristics: United States, 2006

Selected characteristic	Total	Length of time since last had health insurance coverage ¹				
		6 months or less	7–12 months	13–36 months	More than 36 months	Never
		Percent distribution ² (standard error)				
Total ³ (age-adjusted)	100.0	17.1 (0.72)	10.1 (0.57)	18.7 (0.65)	28.9 (0.74)	25.3 (0.98)
Total ³ (crude)	100.0	15.1 (0.58)	9.6 (0.48)	19.1 (0.57)	30.3 (0.72)	25.9 (0.89)

Not poor	100.0	26.4 (4.44)	14.0 (2.89)	24.7 (3.84)	26.9 (3.65)	*8.1 (2.72)

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Length of time since last had health insurance coverage is based on the question (asked of persons currently without health insurance coverage), "Not including single service plans, about how long has it been since [person] last had health care coverage?"

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using two age groups: 25–44 years and 45–64 years.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. population as the standard population using four age groups: 0–11 years, 12–17 years, 18–44 years, and 45–64 years. For crude percentages, refer to Table XVIII in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Reasons for no health insurance coverage are based on the question, "Which of these are reasons [person] stopped being covered or does not have health insurance?" Persons may report more than one reason.

²"Other" includes: moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons.

³Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All currently uninsured persons under age 65 years" column.

⁴Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 25. Age-adjusted percentages (with standard errors) of currently uninsured persons under age 65 years, by selected reasons for no health insurance coverage and selected characteristics: United States, 2006

Selected characteristic	Selected reasons for no health insurance coverage ¹						
	Lost job or change in employment	Change in marital status or death of parent	Ineligible due to age or left school	Employer didn't offer or insurance company refused	Cost	Medicaid stopped	Other ²

See footnotes at end of table.

Table 25. Age-adjusted percentages (with standard errors) of currently uninsured persons under age 65 years, by selected reasons for no health insurance coverage and selected characteristics: United States, 2006—Con.

Selected characteristic	Selected reasons for no health insurance coverage ¹						
	Lost job or change in employment	Change in marital status or death of parent	Ineligible due to age or left school	Employer didn't offer or insurance company refused	Cost	Medicaid stopped	Other ²
Region	Percent ³ (standard error)						
Northeast	20.9 (1.98)	3.3 (0.88)	7.7 (0.81)	13.2 (1.35)	46.0 (2.68)	9.4 (1.74)	11.7 (2.21)
Midwest	26.9 (2.10)	4.7 (0.89)	8.6 (0.82)	14.1 (1.41)	42.8 (2.53)	10.5 (1.27)	8.6 (2.02)
South	23.8 (1.08)	3.1 (0.40)	5.4 (0.39)	12.0 (0.80)	54.6 (1.47)	12.3 (0.87)	4.9 (0.57)
West	22.6 (1.68)	1.8 (0.40)	6.3 (0.71)	15.5 (1.08)	49.1 (1.96)	14.2 (1.23)	7.7 (0.98)

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Reasons for no health insurance coverage are based on the question, "Which of these are reasons [person] stopped being covered or does not have health insurance?" Persons may report more than one reason. In columns that include more than one reason, persons are counted only once.

²"Other" includes: moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons.

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

⁴Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁵Estimates for age groups are not age adjusted.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the 2000 projected U.S. standard population using two age groups: 25–44 years and 45–64 years.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. population as the standard population using four age groups: 0–11 years, 12–17 years, 18–44 years, and 45–64 years. For crude percentages, refer to Table XIX in Appendix III.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Appendix I

Technical Notes on Methods

This report is one of a set of statistical reports published by the staff of the National Center for Health Statistics (NCHS). It is based on data contained in the 2006 in-house Person File, which are derived from the Family Core component of the National Health Interview Survey (NHIS). All estimates were weighted using the Person Record Weight and the in-house data file. All data used in the report are also available from the public-use data files, with the exception of detailed information on race and Hispanic or Latino origin and on the sample design. The detailed sample design information was used to produce the most accurate variance estimates possible. Detailed sample design variables and detailed information on race and Hispanic or Latino origin cannot be made available on the public-use files due to potential disclosure of confidential information. Standard errors (SE) produced by using the SUDAAN statistical package are shown for all percentages and rates in the tables (21). Estimates with a relative standard error (RSE) of greater than 30% and less than or equal to 50% are indicated with an asterisk (*) and should be used with caution as they do not meet the standards of reliability or precision. Estimates with a RSE of greater than 50% are indicated with a dagger (†) and are not shown. The RSE are calculated as follows:

$$\text{Relative standard error} = (SE/Est)100,$$

where *SE* is the standard error of the estimate, and *Est* is the estimate (percentage, rate, or frequency). The reliability of frequencies and the reliability of the corresponding percentages (or rates) are determined independently, so it is possible for a particular frequency to be reliable and its associated percentage (or rate) unreliable, and vice versa. In most instances, however, both estimates were reliable (or unreliable) simultaneously.

Data shown in [Tables 1–25](#) were age adjusted using the projected 2000 U.S. population as the standard population provided by the U.S. Census Bureau (19,20). Age adjustment was used to allow comparison among various population subgroups that have different age structures. This is particularly important for demographic characteristics such as race and ethnicity, education, and marital status. It is also helpful for other characteristics.

Age-adjusted rates are calculated by the direct method as follows:

$$Est = \frac{\sum_{i=1}^n r_i p_i}{\sum_{i=1}^n p_i},$$

where r_i = rate in age group i in the population of interest,
 p_i = standard population in age group i ,
 n = total number of age groups used for age-adjustment,
 and
 Est = the age-adjusted rate.

The standard age distribution used for age adjusting estimates from NHIS is the projected 2000 U.S. population as the standard population. [Table I](#) shows the age distributions used in the DESCRIPT and RATIO procedures of SUDAAN to perform age adjustment. Unless otherwise noted, the age groups used to adjust estimates are the same age groups presented in the tables. Using different age groups for age adjustment may result in slightly different estimates. For this reason, age-adjusted estimates for health characteristics in this report may not match age-adjusted estimates for the same health characteristics in other reports. Unadjusted estimates were also calculated and are provided in [Appendix III](#).

For more information on the derivation of age-adjustment weights for use with NCHS survey data, see Klein and Schoenborn (20). That report is available through the NCHS home page at <http://www.cdc.gov/nchs/data/statnt/statnt20.pdf>. The year

2000 projected U.S. standard resident population is available through the U.S. Census Bureau home page at <http://www.census.gov/prod/1/pop/p25-1130/p251130.pdf>.

In the tables, all unknown values (respondents coded as “refused,” “don’t know,” or “not ascertained”) with respect to each table’s variables of interest were removed from the denominators when calculating row percentages (or rates). In most instances, the overall number of unknowns is quite small and would not have supported disaggregation by the demographic characteristics included in the table. Because these unknowns are not shown separately, users calculating their own percentages based on the frequencies and population counts presented in the tables may obtain slightly different results. To aid users’ understanding of the data, weighted counts and percentages of unknowns (with respect to the variables of interest in each table) are shown in [Tables II](#) and [III](#).

Unknowns with respect to the demographic characteristics used in each table are not shown due to small cell counts. However, unknowns for both family income and poverty status typically include a sizable number of persons regardless of the health outcome shown in the table. Missing data on family income and personal earnings in the NHIS have been imputed by NCHS analysts using multiple-imputation methodology. Five ASCII data sets containing imputed values for the survey year and additional information about the imputed income files can be found at <http://www.cdc.gov/nchs/nhis.htm>. However, income and poverty estimates in this publication are based only on reported income and may differ from other measures that are based on imputed data (which were not available when this report was prepared). Because it is difficult to interpret the relationship between “unknown” income (or poverty status) and the health outcomes displayed in the tables, counts of persons in these unknown categories are not shown in the tables. [Table IV](#) shows weighted counts and percentages of persons in the U.S. population with unknown values for family income and

Table I. Age distributions and age-adjustment weights used in age adjusting data shown in Tables 1–25: 2000 U.S. standard population

Age	Population in thousands	Adjustment weight	Age	Population in thousands	Adjustment weight

NOTE: Standard as specified in Shalala DE. HHS policy for changing the population standard for age adjusting death rates. Memorandum from the Secretary, August 26, 1998.

poverty status as well as education and health insurance coverage.

The “Income and Assets” section in the Family Core of the NHIS instrument allowed respondents to report their family income in several ways. Respondents are first asked to provide their family’s total combined income before taxes from all sources for the previous calendar year in a dollar amount (from \$0 up to \$999,995). Any family income responses greater than \$999,995 are entered as \$999,996. Those respondents who did not know or

refused to state an amount were then asked if their family’s combined income in the previous calendar year was \$20,000 or more or less than \$20,000. If they again refused to answer or said that they did not know, they were not asked any more questions about their family income. Those respondents who did reply to the “above-below \$20,000” question were then handed a list of detailed income categories (top-coded at \$75,000 or more) and asked to pick the interval containing their best estimate of their family’s combined income.

Therefore, NHIS respondents thus fall into one of four categories with respect to income information: those who supplied a dollar amount (66% of the 2006 sample), those who indicated their income from a fairly detailed set of intervals (5% of the sample), those who said that their family’s income was either \$20,000 or more or less than \$20,000 (21% of the sample), and those who provided no income information (9% of the sample) (weighted results). Respondents who stated that their family income was below \$20,000 are included

Table II. Weighted counts and weighted percentages of persons with unknown information for selected health variables: National Health Interview Survey, 2006

Variable	Weighted count in thousands	Weighted percent of persons
Respondent-assessed health status (Tables 1,2)	921	0.31
Limitation in usual activities (Tables 3,4)	756	0.26
Limitation in usual activities caused by chronic conditions (Tables 3,4)	748	0.25
Limitation in activities of daily living (ADL) (Table 5)	71	0.03
Limitation in instrumental activities of daily living (IADL) (Table 5)	75	0.03
Limitation in work activity (Table 6)	138	0.07
Special education or early intervention services (Table 7)	287	0.39
Medical care not received due to cost (Table 15)	901	0.31
Medical care delayed due to cost (Table 15)	966	0.33
Number of overnight hospital stays (Tables 16,17)	180	0.06
Health insurance coverage among persons under age 65 years (Tables 18,19)	2,979	1.15
Health insurance coverage among persons age 65 years and over (Tables 18,19)	290	0.82
Any period without health insurance coverage among currently insured persons under age 65 years (Tables 20,21)	1,028	0.49
Duration of period without health insurance coverage among currently insured persons under age 65 years (Tables 20,21)	155	0.07
Length of time since last had health insurance coverage among currently uninsured persons under age 65 years (Tables 22,23)	3,796	8.74
Reasons for no health insurance coverage among currently uninsured persons under age 65 years (Tables 24,25)	3,497	8.05

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table III. Weighted counts and weighted percentages of injury and poisoning episodes with unknown information: National Health Interview Survey, 2006

Variable	Weighted count in thousands	Weighted percent of episodes
Injury and poisoning episodes by activity at time of episode (Tables 11,12)	302	0.90
Injury and poisoning episodes by place of occurrence (Tables 13,14)	620	1.84

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table IV. Weighted counts and weighted percentages of persons with unknown information on selected sociodemographic characteristics: National Health Interview Survey, 2006

Variable	Weighted count in thousands	Weighted percent of persons
Family income	25,880	8.81
Poverty status	86,596	29.48
Education (persons aged 25 years and over)	7,585	3.95
Health insurance coverage for persons under age 65 years	2,979	1.15
Health insurance coverage for persons aged 65 years and over	290	0.82

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

in the “Less than \$20,000” category under “Family Income” in the tables in this report, along with respondents who gave a dollar amount or an interval estimate that was less than \$20,000. Likewise, respondents who stated that their family income was at or above \$20,000 are included in the “\$20,000 or more” category under “Family Income,” along with those respondents who gave a dollar amount or an interval estimate that was \$20,000 or more. Users will note that the counts for the detailed (indented) amounts do not sum to the count shown for “\$20,000 or more” for this reason.

A recoded poverty status variable is formed for those respondents who supplied either a dollar amount or an interval estimate for their family’s income. This variable is the ratio of the family’s income in the previous calendar year to the appropriate 2005 poverty threshold (given the family’s size and number of children) defined by the U.S. Census Bureau (16). Persons who are categorized as “poor” had a ratio less than 1.0; that is, their family income was strictly below the poverty threshold. The “near poor” category includes those persons with family incomes of 100% to less than 200% of the poverty

threshold. Last, “not poor” persons have family incomes that are 200% of the poverty threshold or greater. The remaining groups of respondents—those who would only indicate that they were at or above \$20,000 or below \$20,000, as well as those who refused to provide any income information—are, by necessity, coded as “unknown” with respect to poverty status. Family income information is missing for 9% of the U.S. population, and poverty status information is missing for 29% of the U.S. population (weighted results). Nine percent of the NHIS sample is missing information on income, and 31% of the NHIS sample is missing information on poverty status (unweighted results).

NCHS analysts have ascertained that hospitalizations for newborns with a normal birth and for women with a normal delivery have been undercounted. Therefore, the estimates associated with hospitalizations reported here are smaller than would be obtained if all hospitalizations for births and deliveries were counted.

Estimates of injury and poisoning episodes by their cause are derived from ICD-9-CM external cause codes (i.e., E codes) that describe the cause of the episode. A person may experience multiple injury or poisoning episodes.

Due to changes in the injury and poisoning section, imputation of unknown dates of injury and poisoning episodes, and the use of a 5-week period rather than a 3-month recall period to

calculate annualized estimates, estimates for 2004 and subsequent years are not comparable to estimates from prior years. For further details about changes to the injury or poisoning questions and analytic methods, effective with 2004, see the “[Methods](#)” section and [Appendix I](#) of the 2004 Summary Health Statistics report for the U.S. Population (13).

Frequencies presented in [Tables 8, 9, 11, and 13](#) were annualized by multiplying the counts for the 5-week period by 10.4 to produce annualized frequencies. Rates presented in [Tables 8, 10, 12, 14, XI, XII, and XIII](#) were calculated using the annualized frequencies.

Hypothesis Tests

Two-tailed tests of significance were performed on all the comparisons mentioned in the “[Selected Highlights](#)” section of this report (no adjustments were made for multiple comparisons). The test statistic used to determine statistical significance of the difference between two percentages was:

$$Z = \frac{|X_a - X_b|}{\sqrt{S_a^2 + S_b^2}},$$

where X_a and X_b are the two percentages being compared, and S_a and S_b are the SUDAAN-calculated standard errors of those percentages. The critical value used for two-sided tests at the 0.05 level was 1.96.

Appendix II

Definitions of Selected Terms

Sociodemographic Terms

Age—The age recorded for each person is the age at the last birthday. Age is recorded in single years and grouped using a variety of age categories depending on the purpose of the table.

Education—The categories of education are based on the years of school completed or highest degree obtained for persons aged 25 years and over. Only years completed in a school that advances a person toward an elementary or high school diploma, General Educational Development high school equivalency diploma (GED), college, university, or professional degree are included. Education in other schools or home schooling is counted only if the credits are accepted in a regular school system.

Family income—Each member of a family is classified according to the total income of all family members. Family members are all persons within the household related to each other by blood, marriage, cohabitation, or adoption. The income recorded is the total income received by all family members in the previous calendar year. Income from all sources includes wages, salaries, military pay (when an Armed Forces member lived in the household), pensions, government payments, child support or alimony, dividends, and help from relatives. Unrelated individuals living in the same household (e.g., roommates) are considered to be separate families and are classified according to their own incomes.

Health insurance coverage—NHIS respondents were asked about their health insurance coverage at the time of interview. Respondents reported whether they were covered by private insurance (obtained through the employer or workplace, purchased directly, or purchased through a local or community program), Medicare, Medigap (supplemental Medicare coverage),

Medicaid, State Children's Health Insurance Program (SCHIP), Indian Health Service (IHS), military coverage (including VA, TRICARE, or CHAMP-VA), a state-sponsored health plan, another government program, or any single service plans. This information was used to form two health insurance hierarchies: one for those under age 65 years and another for those aged 65 years and over.

For persons under age 65 years, a health insurance hierarchy of four mutually exclusive categories was developed (22,23). Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy listed below:

Private coverage—Includes persons who had any comprehensive private insurance plan (including health maintenance organizations and preferred provider organizations). These plans include those obtained through an employer, purchased directly, or purchased through local or community programs.

Medicaid—Includes persons who do not have private coverage, but who have Medicaid or other state-sponsored health plans, including SCHIP.

Other coverage—Includes persons who do not have private coverage or Medicaid (or other public coverage), but who have any type of military health plan (includes VA, TRICARE, and CHAMP-VA) or Medicare. This category also includes persons who are covered by other government programs.

Uninsured—Includes persons who have not indicated that they are covered at the time of the interview under private health insurance (from employer or workplace, purchased directly, or through a state, local government or community program), Medicare, Medicaid, SCHIP, a state-sponsored health plan, other government programs, or military health plan (includes VA, TRICARE, and CHAMP-VA). This category also includes persons who are only covered by IHS or only have a plan that pays for one type

of service such as accidents or dental care.

For persons aged 65 years and over, a health insurance hierarchy of five mutually exclusive categories was developed (24). Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy listed below:

Private coverage—Includes older persons who have both Medicare and any comprehensive private health insurance plan (including health maintenance organizations and preferred provider organizations). These plans include those obtained through a current or former employer, purchased directly, or purchased through local or community programs. This category also includes persons with private insurance only.

Medicare and Medicaid—Includes older persons who do not have any private coverage, but who have both Medicare and Medicaid or other state-sponsored health plans including SCHIP.

Medicare only—Includes older persons who only have Medicare coverage.

Other coverage—Includes older persons who have not been previously classified as having private, Medicare and Medicaid, or Medicare-only coverage. It includes older persons who have only Medicaid, other state-sponsored health plans, or SCHIP. It also includes persons who have any type of military health plan (VA, TRICARE, and CHAMP-VA) with or without Medicare.

Uninsured—Includes persons who have not indicated that they are covered at the time of the interview under private health insurance (from employer or workplace, purchased directly, or obtained through a state, local government, or community program), Medicare, Medicaid, Children's Health Insurance Program, a state-sponsored health plan, other government programs, or military health plan (VA, TRICARE,

and CHAMP-VA). This category also includes persons who are covered by only IHS or who only have a plan that pays for one type of service such as accidents or dental care.

Hispanic or Latino origin and race—Hispanic or Latino origin and race are two separate and distinct concepts. Persons of Hispanic or Latino origin may be of any race. Hispanic or Latino origin includes persons of Mexican, Puerto Rican, Cuban, Central and South American, or Spanish origins. All tables show Mexicans or Mexican Americans as a subset of Hispanic or Latino. Other groups are not shown for reasons of confidentiality or statistical reliability.

In the 1997 and 1998 Summary Health Statistics reports (25–30), Hispanic ethnicity was shown as a part of race and ethnicity, which also included categories for non-Hispanic white, non-Hispanic black, and non-Hispanic other (some tables showed Mexican Americans as a subset of Hispanic persons). Beginning in 1999, the categories for race were expanded to be consistent with the 1997 Office of Management and Budget (OMB) federal guidelines (12), and a distinction is now made between the characteristics of race and of Hispanic or Latino origin and race. In addition to reporting estimates according to race, estimates are reported for groups classified by Hispanic or Latino and race. Hispanic or Latino origin and race is divided into “Hispanic or Latino” and “Not Hispanic or Latino.” “Hispanic or Latino” includes a subset of “Mexican or Mexican American.” “Not Hispanic or Latino” is further divided into “white, single race” and “black or African American, single race.” Persons in these categories indicated only a single race group (see the definition of race in this appendix for more information). Data are not shown for other “Not Hispanic or Latino single race” persons or multiple-race persons due to statistical unreliability as measured by the relative standard errors of the estimates (but are included in the total for “Not Hispanic or Latino”).

The text in this report uses shorter versions of the new OMB race and Hispanic or Latino origin terms for conciseness, and the tables use the complete terms. For example, the category “Not Hispanic or Latino, black or African American, single race” in the tables is referred to as “Non-Hispanic black” in the text.

Place of residence—Place of residence is classified in this report in three categories: large metropolitan statistical area (MSA) of 1,000,000 or more persons, small MSA of less than 1,000,000 persons, and not in an MSA. Generally, an MSA consists of a county or group of counties containing at least one urbanized area of 50,000 or more population. In addition to the county or counties that contain all or part of the urbanized area, an MSA may contain other adjacent counties that are economically and socially integrated with the central city. The number of adjacent counties included in an MSA is not limited, and boundaries may cross state lines.

OMB defines metropolitan areas according to published standards that are applied to U.S. Census Bureau data. The definition of a metropolitan area is periodically revised. For NHIS data for 1995 through 2005, the MSA definition was based on the 1993 OMB standards using the 1990 census. Beginning in 2006, the 2003 OMB standards, based on Census 2000, are used for NHIS data. The 2003 criteria for designating MSAs differ from the 1993 criteria in substantial ways, including simplification of the classification criteria of metropolitan areas as well as the addition of a new category—micro-metropolitan area—for some of the nonmetropolitan counties. These changes may lessen the comparability of estimates by place of residence in 2006 with estimates from earlier years. Analysts who compare NHIS frequencies across this transition in OMB standards need to recognize that some of the differences may be due to change in the definitions of metropolitan areas. In the tables for this report, place of residence is based on variables in the 2006 in-house Household data file indicating MSA status and MSA size. These variables are collapsed into three

categories based on Census 2000 population: MSAs with a population of 1,000,000 or more, MSAs with a population of less than 1,000,000, and areas that are not within an MSA. Areas not in an MSA include both metropolitan areas and areas outside the core-based statistical areas. For additional information about metropolitan statistical areas see the Census website: <http://www.census.gov/population/www/estimates/metrodef.html>.

Poverty status—Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds. “Poor” persons are defined as below the poverty threshold. “Near Poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not Poor” persons have incomes that are 200% of the poverty threshold or greater. [Appendix I](#) has more information on the measurement of family income and poverty status.

Race—In the 1997 and 1998 Summary Health Statistics reports (25–30), race and ethnicity consisted of four categories: non-Hispanic white, non-Hispanic black, non-Hispanic other, and Hispanic (some tables showed Mexican Americans as a subset of Hispanic persons). Beginning in 1999, the categories for race were expanded to be consistent with the 1997 OMB federal guidelines (12), which now distinguish persons of “1 race” from persons of “2 or more races.” The category “1 race” refers to persons who indicated only a single race group, and it includes subcategories for white, black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or other Pacific Islander. The category “2 or more races” refers to persons who indicated more than one race group. Data for multiple-race combinations can only be reported to the extent that the estimates meet the requirements for confidentiality and statistical reliability. In this report, three categories are shown for multiple-race individuals (a summary category and two multiple-race categories: black or African American and white or American Indian and Alaska Native and white). Other combinations are not shown separately due to statistical unreliability as measured by the relative

standard errors of the estimates (but they are included in the total for “2 or more races”).

Prior to 2003, “other race” was a separate race response on NHIS, although it was not shown separately in the tables of the Summary Health Statistics reports. Beginning with the 2003 NHIS, however, editing procedures were changed to maintain consistency with the U.S. Census Bureau procedures for collecting and editing data on race and ethnicity. As a result, in cases where “other race” was mentioned along with one or more OMB race groups, the “other race” response is dropped, and the OMB race group information is retained on the NHIS data file. In cases where “other race” is the only race response, it is treated as missing and the race is imputed. Although this change has resulted in an increase in the number of persons in the OMB race category “white” because this is numerically the largest group, the change is not expected to have a substantial effect on the estimates in this report. More information about the race and ethnicity editing procedures used by the U.S. Census Bureau can be found at the following website: <http://www.census.gov/popest/archives/files/MRSF-01-US1.pdf>.

The text in this report uses shorter versions of the new OMB race terms for conciseness and the tables use the complete terms. For example, the category “black or African American, single race” in the tables is referred to as “black” in the text.

Region—In the geographic classification of the U.S. population, states are grouped into the four regions used by the U.S. Census Bureau:

<i>Region</i>	<i>States included</i>
Northeast	Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania;
Midwest	Ohio, Illinois, Indiana, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Kansas, and Nebraska;
South	Delaware, Maryland, District of Columbia, West Virginia,

Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Oklahoma, Arkansas, and Texas;

West Washington, Oregon, California, Nevada, New Mexico, Arizona, Idaho, Utah, Colorado, Montana, Wyoming, Alaska, and Hawaii.

Terms Related to Health Characteristics or Outcomes

Limitation in activities of daily living (ADLs)—Activities of daily living include such activities as bathing, eating, dressing, getting in or out of a bed or chair, using the toilet, or getting around inside the home. Persons were limited in ADLs if they required the help of other persons with any of these activities due to a physical, mental, or emotional problem. Data in this report are shown only for persons aged 18 years and over, although the questions were asked of or about persons aged 3 years and over. Persons with a limitation in ADLs (Table 5) are a subset of persons who were limited in usual activity (Tables 3,4).

Limitation in instrumental activities of daily living (IADLs)—Instrumental activities of daily living include everyday household chores, doing necessary business, or shopping. Persons aged 18 years and over were classified as limited in IADLs if they required the help of other persons with any of these activities due to a physical, mental, or emotional problem. Persons with a limitation in IADLs (Table 5) are a subset of persons who were limited in usual activity (Tables 3,4).

Limitation in usual activities—Limitation in usual daily activities is an overall measure of limitation. It includes limitations of any type and for any reason.

Not limited—describes persons who were not limited in their usual age-appropriate work, school, or play activities, activities of daily living, instrumental activities of

daily living, or in any other way due to a physical, mental, or emotional problem.

Limited—describes persons who were limited in some way due to a physical, mental, or emotional problem, including age-appropriate work, school, or play activities, activities of daily living, or instrumental activities of daily living.

Limited due to one or more chronic conditions—describes persons whose limitation was due to at least one condition that is considered chronic; this category is a subset of the “limited” category.

Limitation in work activity—Limitation in work activity status is based on a series of questions about the ability of adults aged 18–69 years to engage in work activity, regardless of whether or not they currently held a job. Persons with a limitation in work activity (Table 6) are a subset of persons who were limited in usual activity (Tables 3,4).

Unable to work—describes adults who were not able to work at a job or business due to a physical, mental, or emotional problem.

Limited in work—describes adults who were able to work, but were limited in the kind or amount of work they could do due to a physical, mental, or emotional problem.

Not limited in work—describes adults who did not report any limitation in their ability to work at a job or business.

Chronic condition—A condition is considered chronic if (a) its onset was more than 3 months before the date of interview, or (b) it is a type of condition that ordinarily lasts more than 3 months. Examples of conditions considered chronic regardless of onset are diabetes, emphysema, and arthritis.

Early intervention services—Early intervention services are services designed to meet the needs of very young children with special needs or disabilities. They may include, but are

not limited to, medical and social services, parental counseling, and therapy. Services may be provided at the child's home, a medical center, a day care center, or other location. They are provided by the state or school system at no cost to the parent.

Health status—See “Respondent-assessed health status.”

Injury and poisoning episodes—Injury episode refers to a traumatic event in which the person experienced one or more injuries due to an external cause (e.g., a fall down a flight of stairs, motor vehicle traffic accident, etc.). Poisoning episode refers to the ingestion of or contact with harmful substances, as well as overdoses or misuse of any drug or medication. Medically consulted injury or poisoning episode refers to an injury or poisoning episode for which a health care professional was contacted either in person or by telephone for advice or treatment. Calls to a poison control center are also considered to be a contact with a health care professional.

Instrumental activities of daily living (IADLs) —See “Limitation in instrumental activities of daily living (IADLs).”

Overnight hospital stay—An overnight hospital stay is a measure of the number of times a person was hospitalized in the previous 12 months. Visits to a hospital emergency room that did not result in admission to the hospital are not included. Overnight hospital stays for the birth of a child are counted for both the mother and the child.

Period without health insurance coverage—A period without health insurance coverage may be of any duration and for any reason. Information on the number of months without coverage was collected for persons who had health insurance coverage at the time of interview. Number of months without coverage was collapsed into two categories for presentation in this report.

Reasons for no health insurance coverage—Persons without health insurance coverage at the time of interview were asked the reasons for not having coverage. A maximum of five reasons could be reported. Persons who reported more than one reason within a category were counted only once for

that category. Unknown reasons were included in the “other” category.

Respondent-assessed health status—Respondent-assessed health status was based on the question, “Would you say your health, in general, was excellent, very good, good, fair, or poor”? Information was obtained from all respondents, with proxy responses allowed for adults not taking part in the interview and all children aged 17 years and under.

Special education—Special education is teaching designed to meet the needs of a child with special needs or disabilities. It is paid for by the public school system and may take place at a regular school, at a special school, at a private school, at home, or at a hospital. It is designed for children 3–21 years of age, although data collected in NHIS are limited to children 17 years of age and under.

Time since last had health insurance coverage—Time since last had health insurance coverage was asked of persons who were not insured at the time of interview. Responses were reported in single months and categorized for presentation in this report. “One month” includes durations of 1 month or less (but more than zero).

Appendix III

Tables of Unadjusted Estimates

Table V. Crude percent distributions (with standard errors) of respondent-assessed health status, by selected characteristics: United States, 2006

Selected characteristic	Total	Respondent-assessed health status ¹				
		Excellent	Very good	Good	Fair	Poor
		Percent distribution ² (standard error)				
Total ³ (crude)	100.0	35.1 (0.35)	30.8 (0.30)	24.6 (0.28)	7.3 (0.14)	2.2 (0.07)
Total ³ (age-adjusted)	100.0	35.5 (0.35)	30.8 (0.30)	24.4 (0.28)	7.2 (0.14)	2.1 (0.07)
Sex						
Male	100.0	36.3 (0.40)	30.6 (0.36)	24.2 (0.34)	6.8 (0.17)	2.0 (0.08)
Female	100.0	34.0 (0.38)	31.0 (0.33)	24.9 (0.31)	7.8 (0.18)	2.3 (0.09)
Age						
Under 12 years	100.0	54.2 (0.75)	27.8 (0.62)	16.0 (0.51)	1.8 (0.16)	0.1 (0.03)
12–17 years	100.0	50.5 (0.87)	28.2 (0.72)	19.3 (0.66)	1.8 (0.17)	0.2 (0.05)
18–44 years	100.0	37.9 (0.48)	33.8 (0.44)	22.7 (0.39)	4.7 (0.17)	1.0 (0.07)
45–64 years	100.0	23.7 (0.47)	31.7 (0.47)	29.2 (0.47)	11.3 (0.29)	4.1 (0.17)
65–74 years	100.0	15.8 (0.69)	26.9 (0.83)	35.5 (0.85)	16.8 (0.69)	5.1 (0.39)
75 years and over	100.0	10.6 (0.61)	24.2 (0.95)	37.1 (0.97)	21.0 (0.78)	7.1 (0.47)
Race						
1 race ⁴	100.0	35.0 (0.36)	30.9 (0.30)	24.6 (0.29)	7.3 (0.14)	2.2 (0.07)
White	100.0	35.4 (0.40)	31.6 (0.35)	23.9 (0.32)	7.0 (0.16)	2.1 (0.08)
Black or African American	100.0	31.4 (0.77)	27.1 (0.67)	28.9 (0.72)	9.9 (0.38)	2.8 (0.19)
American Indian or Alaska Native	100.0	31.4 (3.30)	28.4 (2.83)	29.9 (2.83)	7.5 (1.32)	2.8 (0.80)
Asian	100.0	39.1 (1.42)	29.6 (1.06)	25.1 (1.00)	4.7 (0.45)	1.5 (0.22)

* Estimates preceded by an asterisk have a relative standard error of greater than 30% but less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹ Respondent-assessed health status is based on the question, "Would you say [person's] health in general is excellent, very good, good, fair, or poor?"

² Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁵ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 2.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table VI. Crude percent distributions (with standard errors) of limitation in usual activities, and percentages (with standard errors) of persons limited due to 1 or more chronic conditions, by selected characteristics: United States, 2006

Not poor	100.0	92.2 (0.56)	7.8 (0.56)	7.4 (0.53)

* Estimates preceded by an asterisk have a relative standard error of greater than 30% but less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

¹Limitation in usual activities is based on a series of questions concerning: limitation(s) in a person's ability to engage in work, school, play, or other activities for health reasons; the specific conditions causing the limitation(s); and the duration of these conditions. Conditions lasting more than 3 months are classified as chronic; selected conditions (e.g., arthritis, diabetes, cancer, heart conditions) are considered chronic regardless of duration.

²The category "Limited due to 1 or more chronic conditions" is a subset of the category "Limited."

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

⁴Percentages may not add to totals because of rounding.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 4.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% but less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

¹ADL is activities of daily living. Limitation in ADL is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons with PERSONAL CARE NEEDS, such as eating, bathing, dressing, or getting around inside the home?"

²IADL is instrumental activities of daily living. Limitation in IADL is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons in handling ROUTINE NEEDS, such as everyday household chores, doing necessary business, shopping, or getting around for other purposes?"

³Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I).

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. * Estimates preceded by an asterisk have a relative standard error of greater than 30% but less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Limitation in work activity is based on the questions, “Does a physical, mental, or emotional problem NOW keep [family members 18 years of age or older] from working at a job or business?” and for persons not kept from working, “Are [family members 18 years of age and older] limited in the kind or amount of work they can do because of a physical, mental, or emotional problem?”

²Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I).

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 6.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Receiving special education or early intervention services is based on the question, "Do any of the following [family members under 18 years of age] receive special education or early intervention services?"

²Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I).

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

⁸Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

⁹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁰MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 7.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Injury and poisoning episodes are based on the questions, “Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?” and “Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?” Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.

³In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁴The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁵Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁶Education is shown only for persons aged 25 years and over.

⁷GED is General Educational Development high school equivalency diploma.

⁸The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

⁹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹⁰Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹¹MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted rates, refer to Table 8.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Injury and poisoning episodes are based on the questions, “Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?” and “Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?” Injury and poisoning episodes are classified according to the external cause of the episode using categories based on the International Classification of Diseases, Ninth Revision, Clinical Modification, external cause codes (E codes). The category “Transportation” includes motor vehicle, bicycle, motorcycle, pedestrian, train, boat, and airplane. The category “Other” includes fire/burn/scald related, animal or insect bite, machinery, and other (not specified). The category “Poisoning” excludes food poisoning and allergic reaction. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury poisoning episode and the date the injury poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²Other causes (injury)³ includes unknown causes.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

Beginning in the third quarter of 2004, two additional questions were added to the National Health Interview Survey insurance section to reduce potential errors in reporting of Medicare and Medicaid status. Persons 65 years and over not reporting Medicare coverage were asked explicitly about Medicare coverage, and persons under 65 years with no reported coverage were asked explicitly about Medicaid coverage. Estimates of uninsurance for 2004 are calculated with the responses to these questions included (see Appendix I).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted rates, refer to Table 10.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

– Quantity zero.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Activity at time of injury or poisoning episodes is based on the question, "What activity was [person] involved in at the time of the injury/poisoning?" Respondents could indicate up to two activities. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury or poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury or poisoning episode and the date the injury or poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²"Driving" includes both drivers and passengers.

³"Other" includes unpaid work such as housework, shopping, volunteer work, sleeping, resting, eating, drinking, cooking, hands-on care from another person, and other unspecified activities.

⁴Unknowns were excluded from the denominator when calculating rates.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted rates, refer to Table 12.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Place of occurrence of injury and poisoning episodes is based on the question, "Where was [person] when the injury poisoning happened?" Respondents could indicate up to two places. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

²Unknowns were excluded from the denominator when calculating rates.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted rates, refer to Table 14.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XIV. Crude percentages (with standard errors) of persons who did not receive medical care or who delayed medical care in the past year due to cost, by selected characteristics: United States, 2006

Not poor	4.8 (0.50)	6.3 (0.58)

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

¹Did not receive medical care due to cost is based on the question, "During the past 12 months, was there any time when [person] needed medical care but did not get it because [person] could not afford it?" (Excludes dental care.)

²Delayed medical care due to cost is based on the question, "During the past 12 months has [person] delayed seeking medical care because of worry about the cost?" (Excludes dental care.)

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 15.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Number of hospital stays is based on the questions, "During the past 12 months was [person] a patient in a hospital overnight?" and "How many different times did [person] stay in any hospital overnight or longer during the past 12 months?" Hospital stays due to childbirth are included but overnight stays in an emergency room are excluded. NCHS analysts have ascertained that hospitalizations for newborns with a normal birth and for women with a normal delivery have been undercounted (see Appendix I).

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those aged 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 17.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XVI. Crude percent distributions (with standard errors) of type of health insurance coverage for persons under age 65 years and for persons 65 years of age and over, by selected characteristics: United States, 2006

. . . Category not applicable.

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Health insurance coverage is based on the question, “What kind of health insurance or health care coverage does [person] have? INCLUDE those that pay for only one type of service (nursing home care, accidents, or dental care), exclude private plans that only provide extra cash while hospitalized.” Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately because of the prominence of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 years and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, and current health status.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 19.

DATA SOURCE: CDC–CHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XVII. Crude percent distributions (with standard errors) of any period without health insurance coverage during the past 12 months and percentages (with standard errors) of persons who were without coverage for 6 months or less or 7–12 months, among currently insured persons under age 65 years, by selected characteristics: United States, 2006

Not poor.	100.0	96.2 (0.24)	3.8 (0.24)	2.9 (0.21)	0.9 (0.11)
Black or African American, single race:					
Poor	100.0	93.6 (0.99)	6.4 (0.99)	4.3 (0.85)	2.0 (0.43)
Near poor	100.0	91.9 (1.02)	8.1 (1.02)	4.9 (0.76)	2.9 (0.61)
Not poor.	100.0	94.8 (0.66)	5.2 (0.66)	3.7 (0.57)	1.4 (0.33)

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Any period without coverage is based on the question (asked of persons who currently had health insurance), "In the PAST 12 MONTHS, was there any time when [person] did NOT have ANY health insurance or coverage?"

²Duration of period without coverage is based on the question (asked of persons who currently had health insurance), "In the PAST 12 MONTHS, about how many months was [person] without coverage?"

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

⁴Persons having any period without health insurance coverage includes persons with unknown duration of period without coverage.

⁵Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, Black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 21.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XVIII. Crude percent distributions (with standard errors) of length of time since last had health insurance coverage among currently uninsured persons under age 65 years, by selected characteristics: United States, 2006

Selected characteristic	Total	Length of time since last had health insurance coverage ¹				
		6 months or less	7–12 months	13–36 months	More than 36 months	Never

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

¹Length of time since last had health insurance coverage is based on the question (asked of persons currently without health insurance coverage), “Not including single service plans, about how long has it been since [person] last had health care coverage?”

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 23.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

West	22.3 (1.48)	1.7 (0.33)	7.8 (0.79)	17.5 (1.20)	49.3 (1.78)	11.9 (0.97)	7.2 (0.80)	

* Estimates preceded by an asterisk have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger, but are not shown.

– Quantity zero.

¹Reasons for no health insurance coverage are based on the question, “Which of these are reasons [person] stopped being covered or does not have health insurance?” Persons may report more than one reason. In columns that include more than one reason, persons are counted only once.

²“Other” includes: moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons.

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

⁴Total includes other races not shown separately and persons with unknown education, family income, and poverty status.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately because of small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, Black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown because of small sample sizes for other combinations.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “Less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 25.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2006. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Vital and Health Statistics series descriptions

- SERIES 1. **Programs and Collection Procedures**—These reports describe the data collection programs of the National Center for Health Statistics. They include descriptions of the methods used to collect and process the data, definitions, and other material necessary for understanding the data.
- SERIES 2. **Data Evaluation and Methods Research**—These reports are studies of new statistical methods and include analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. These studies also include experimental tests of new survey methods and comparisons of U.S. methodology with those of other countries.
- SERIES 3. **Analytical and Epidemiological Studies**—These reports present analytical or interpretive studies based on vital and health statistics. These reports carry the analyses further than the expository types of reports in the other series.
- SERIES 4. **Documents and Committee Reports**—These are final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. **International Vital and Health Statistics Reports**—These reports are analytical or descriptive reports that compare U.S. vital and health statistics with those of other countries or present other international data of relevance to the health statistics system of the United States.
- SERIES 6. **Cognition and Survey Measurement**—These reports are from the National Laboratory for Collaborative Research in Cognition and Survey Measurement. They use methods of cognitive science to design, evaluate, and test survey instruments.
- SERIES 10. **Data From the National Health Interview Survey**—These reports contain statistics on illness; unintentional injuries; disability; use of hospital, medical, and other health services; and a wide range of special current health topics covering many aspects of health behaviors, health status, and health care utilization. They are based on data collected in a continuing national household interview survey.
- SERIES 11. **Data From the National Health Examination Survey, the National Health and Nutrition Examination Surveys, and the Hispanic Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement on representative samples of the civilian noninstitutionalized population provide the basis for (1) medically defined total prevalence of specific diseases or conditions in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics, and (2) analyses of trends and relationships among various measurements and between survey periods.
- SERIES 12. **Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. **Data From the National Health Care Survey**—These reports contain statistics on health resources and the public's use of health care resources including ambulatory, hospital, and long-term care services based on data collected directly from health care providers and provider records.
- SERIES 14. **Data on Health Resources: Manpower and Facilities**—Discontinued in 1990. Reports on the numbers, geographic distribution, and characteristics of health resources are now included in Series 13.
- SERIES 15. **Data From Special Surveys**—These reports contain statistics on health and health-related topics collected in special surveys that are not part of the continuing data systems of the National Center for Health Statistics.
- SERIES 16. **Compilations of Advance Data From Vital and Health Statistics**—Advance Data Reports provide early release of information from the National Center for Health Statistics' health and demographic surveys. They are compiled in the order in which they are published. Some of these releases may be followed by detailed reports in Series 10–13.
- SERIES 20. **Data on Mortality**—These reports contain statistics on mortality that are not included in regular, annual, or monthly reports. Special analyses by cause of death, age, other demographic variables, and geographic and trend analyses are included.
- SERIES 21. **Data on Natality, Marriage, and Divorce**—These reports contain statistics on natality, marriage, and divorce that are not included in regular, annual, or monthly reports. Special analyses by health and demographic variables and geographic and trend analyses are included.
- SERIES 22. **Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys, based on vital records, are now published in Series 20 or 21.
- SERIES 23. **Data From the National Survey of Family Growth**—These reports contain statistics on factors that affect birth rates, including contraception, infertility, cohabitation, marriage, divorce, and remarriage; adoption; use of medical care for family planning and infertility; and related maternal and infant health topics. These statistics are based on national surveys of women of childbearing age.
- SERIES 24. **Compilations of Data on Natality, Mortality, Marriage, and Divorce**—These include advance reports of births, deaths, marriages, and divorces based on final data from the National Vital Statistics System that were published as *National Vital Statistics Reports* (NVSR), formerly *Monthly Vital Statistics Report*. These reports provide highlights and summaries of detailed data subsequently published in *Vital Statistics of the United States*. Other special reports published here provide selected findings based on final data from the National Vital Statistics System and may be followed by detailed reports in Series 20 or 21.
