VI.	Crude percent distribution of limitation in usual activities, and percentage of persons limited due to one or more chronic conditions, by selected characteristics: United States, 2011 .....	73
VII.	Crude percentages of persons aged 18 and over having limitation in activities of daily living and instrumental activities of daily living, by selected characteristics: United States, 2011 .....	75
VIII.	Crude percent distribution of limitation in work activity due to health problems among persons aged 18–69, by selected characteristics: United States, 2011 .....	77
IX.	Crude percentage of persons under age 18 who were receiving special education or early intervention services, by selected characteristics: United States, 2011 .....	79
X.	Crude annualized rate of medically consulted injury and poisoning episodes, by selected characteristics: United States, 2011 .....	81
XI.	Crude annualized rate of medically consulted injury and poisoning episodes, by external cause and selected characteristics: United States, 2011 .....	83
XII.	Crude annualized rate of medically consulted injury and poisoning episodes, by activity engaged in at the time of the episode and selected characteristics: United States, 2011 .....	85
XIII.	Crude annualized rate of medically consulted injury and poisoning episodes, by place of occurrence and selected characteristics: United States, 2011 .....	87
XIV.	Crude percentages of persons who did not receive medical care or who delayed seeking medical care in the past year due to cost, by selected characteristics: United States, 2011 .....	90
XV.	Crude percent distribution of number of overnight hospital stays during the past 12 months, by selected characteristics: United States, 2011 .....	92
XVI.	Crude percent distributions of type of health insurance coverage for persons under age 65 and for persons aged 65 and over, by selected characteristics: United States, 2011 .....	94
XVII.	Crude percent distribution of any period without health insurance coverage during the past 12 months, and percentages of persons who were without coverage for 6 months or less or for 7–12 months, among currently insured persons under age 65, by selected characteristics: United States, 2011 .....	97
XVIII.	Crude percent distribution of length of time since last had health insurance coverage among currently uninsured persons under age 65, by selected characteristics: United States, 2011 .....	99
XIX.	Crude percentage of currently uninsured persons under age 65, by selected reasons for no health insurance coverage and by selected characteristics: United States, 2011 .....	101

**Objectives**

This report presents both age-adjusted and unadjusted health statistics from the 2011 National Health Interview Survey (NHIS) for the civilian noninstitutionalized population of the United States. Estimates are disaggregated by sex, age, race, Hispanic origin, education, family income, poverty status, health insurance coverage (where appropriate), place of residence, and region of residence. The topics covered are respondent-assessed health status, limitations in activities, special education or early intervention services, injury and poisoning episodes, health care access and utilization, and health insurance coverage.

**Data Source**

NHIS is a household, multistage probability sample survey conducted annually by interviewers of the U.S. Census Bureau for the Centers for Disease Control and Prevention's National Center for Health Statistics. In 2011, household interviews were completed for 101,875 persons living in 39,509 households, reflecting a household response rate of 82.0%.

**Selected Highlights**

Nearly 7 in 10 persons were in excellent or very good health in 2011. About 40 million persons (13%) were limited in their usual activities due to one or more chronic health conditions. About 5 million persons (2%) required the help of another person with activities of daily living, and about 10 million persons (4%) required the help of another person with instrumental activities of daily living. About 7% of children received special education or early intervention services. Among persons under age 65, about 45 million (17%) did not have any health insurance coverage. The most common reason for lacking health insurance was cost, followed by a change in employment.

**Keywords:** activity limitation • injuries and poisonings • health care access • health insurance coverage

# Summary Health Statistics for the U.S. Population: National Health Interview Survey, 2011

by *Patricia F. Adams; Whitney K. Kirzinger, M.P.H.; and Michael E. Martinez, M.P.H., M.H.S.A., Division of Health Interview Statistics*

## Introduction

This report is one in a set of reports summarizing data from the 2011 National Health Interview Survey (NHIS). NHIS is a multipurpose health survey conducted by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS). This report provides national estimates for a broad range of health measures for the U.S. civilian noninstitutionalized population. The other two reports in this set provide estimates of selected health measures for children (1) and for adults (2). These three volumes of descriptive statistics and highlights are published for each year of NHIS (3–5), and since 1997 have replaced the annual, one-volume Current Estimates series (6).

Estimates are derived from the Family Core component of the annual NHIS and are presented for respondent-assessed health status, limitations in activities, special education or early intervention services, injury and poisoning episodes, health care access and utilization, and health insurance coverage. These estimates are shown in [Tables 1–25](#) for various subgroups of the population, including those defined by sex, age, race, Hispanic origin, educational attainment for persons aged 25 and over, family income, poverty status, health insurance coverage, place of residence, and region of residence. Estimates for other characteristics of special relevance are also included. [Appendix I](#) contains brief technical notes on methods, including information about age adjustment and unknown values ([Tables I–IV](#)). [Appendix II](#)

provides definitions of terms used in this report, and [Appendix III](#) contains tables of unadjusted (crude) estimates ([Tables V–XIX](#)).

NHIS has been an important source of information about health and health care in the United States since it was first conducted in 1957. Because of the ever-changing nature of the U.S. population, the NHIS questionnaire has been revised every 10–15 years, with the latest revision occurring in 1997. The first sample design changes were introduced in 1973, and the first procedural changes in 1975 (7). In 1982, the NHIS questionnaire and data preparation procedures for the survey were extensively revised. In some cases, the basic concepts of NHIS changed, and in other cases the concepts were measured in a different way. [For a more complete explanation of the 1982 changes, see “Current Estimates From the National Health Interview Survey: United States, 1982,” [Appendix IV](#) (8).] In 1985, a new sample design for NHIS and a different method of presenting sampling errors were introduced (9,10). In 1995, another change in the sample design was introduced, including the oversampling of black and Hispanic persons (11).

In 1997, the NHIS questionnaire was substantially revised, and the means of administration was changed to computer-assisted personal interviewing. This new design improved the ability of NHIS to provide important health information. However, comparisons of data from 1997 through 2011 with data from 1996 and earlier years should not be undertaken without a careful examination of the changes across survey instruments (6,8,10).

In response to the changing demographics of the U.S. population, in 1997 the Office of Management and Budget (OMB) issued new standards for collecting data on race and Hispanic or Latino origin (12). Most notably, these new standards allow respondents to the census and federal surveys to indicate more than one race group in answering questions on race. Additionally, the category “Asian or Pacific Islander” is now split into two distinct categories—“Asian” and “Native Hawaiian or Other Pacific Islander”—for data collection purposes. Although NHIS had allowed respondents to choose more than one race group for many years, the survey became fully compliant with the 1997 OMB race and ethnicity standards with the fielding of the 1999 NHIS. The tables in the present report reflect the current (1997) standards. The text uses shorter versions of the 1997 OMB race and Hispanic or Latino origin terms for conciseness, but the tables use the complete terms. For example, the category “Not Hispanic or Latino, black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text. Although the tables contain information for persons of two or more races, the “Selected Highlights” section focuses on persons reporting one race.

The NHIS sample is redesigned and redrawn about every 10 years to better measure the changing U.S. population and to meet new survey objectives. A new sample design for NHIS was implemented in 2006 and continues in use. Its fundamental structure is very similar to the previous 1995–2005 NHIS sample design, including state-level stratification. The current design reduces the NHIS sample size by about 13% compared with the 1995–2005 NHIS. In 2006 and beyond, oversampling of the black and Hispanic populations has been retained to allow for more precise estimation of health characteristics in these growing minority populations. The current sample design also oversamples the Asian population. In addition, the sample adult selection process has been revised so that when black, Hispanic, or Asian persons aged 65 and over are in the family, they have an increased chance of being selected as the sample adult.

Additionally, beginning with the 2003 NHIS, editing procedures were changed to maintain consistency with the U.S. Census Bureau procedures for collecting and editing data on race and ethnicity. As a result of these changes, in cases where “other race” is mentioned along with one or more OMB race groups, the “other race” response is dropped and the OMB race group information is retained on the NHIS data file. In cases where “other race” was the only race response, it is treated as missing and the race is imputed. Although this change has resulted in an increase in the number of persons in the OMB race category “White,” which numerically is the largest group, the change is not expected to have a substantial effect on the estimates in this report. More information about the race/ethnicity editing procedures used by the Census Bureau can be found at: <http://www.census.gov/popest/data/historical/files/MRSF-01-US1.pdf>.

Since 2004, imputation has been performed for injury and poisoning episodes for which the respondent did not provide sufficient information to determine a month, day, and year of occurrence. Imputation was done so that for all episodes it would be possible to calculate a specific elapsed time in days between the date of the injury or poisoning episode and the date the injury or poisoning questions were asked. For further details about changes to the injury and poisoning questions and analytic methods, see both the “Methods” section and [Appendix I](#) of the 2004 Summary Health Statistics report for the U.S. population (13).

## Methods

### Data Source

The main objective of NHIS is to monitor the health of the U.S. population through the collection and analysis of data on a broad range of health topics. The target population for NHIS is the civilian noninstitutionalized population of the United States. Persons excluded are patients in long-term care

institutions (e.g., nursing homes for the elderly, hospitals for the chronically ill or physically or intellectually disabled, and wards for abused or neglected children); correctional facilities (e.g., prisons or jails, juvenile detention centers, and halfway houses); active-duty Armed Forces personnel (although their civilian family members are included); and U.S. nationals living in foreign countries. Each year, a representative sample of households across the country is selected for NHIS, using a multistage cluster sample design. Details on sample design can be found in “Design and Estimation for the National Health Interview Survey, 1995–2004” (11). A new report providing a complete description of the 2006 NHIS sample design is being developed. Trained interviewers from the U.S. Census Bureau visit each selected household and administer NHIS in person. Detailed interviewer instructions can be found in the NHIS field representative’s manual (14).

The annual NHIS questionnaire (also called the Core) consists of four main components: Household Composition, Family Core, Sample Adult Core, and Sample Child Core. The Household Composition section of the questionnaire collects some basic demographic and relationship information about all persons in the household. The Family Core, which is administered separately for each family in the household and is the source of data for this report, collects information for all family members. Topics on the Family Core include sociodemographic characteristics, basic indicators of health status, limitation in activities, injuries, health insurance coverage, and utilization of health care services. One responsible family member whose age is equal to or over the age of majority for a given state responds to questions about all family members in the Family Core. In most states this age is 18 years, but in Alabama and Nebraska it is 19 years and in Mississippi it is 21 years. For children and adults not available during the interview, information is provided by a knowledgeable adult family member (usually aged 18 or over, see above) residing in the household. Although considerable effort

is made to ensure accurate reporting, information from both proxies and self-respondents may be inaccurate because the respondent is unaware of relevant information, has forgotten it, does not wish to reveal it to an interviewer, or does not understand the intended meaning of the question.

The Sample Adult and Sample Child Cores obtain additional information on the health of one randomly selected adult (the “sample adult”) and one randomly selected child (the “sample child”) in the family. Sample adults respond for themselves, and a knowledgeable adult in the family provides proxy responses for the sample child. In rare instances when the sample adult is mentally or physically incapable of responding, proxy responses are accepted for this person.

The interviewed sample for 2011 consisted of 39,509 households, which yielded 101,875 persons in 40,496 families. The total noninterview rate was 19.0%, of which 11.9% was the result of respondent refusal and unacceptable partial interviews. The remainder was primarily the result of failure to locate an eligible respondent at home after repeated calls (15).

## Estimation Procedures

The estimates presented in this report are weighted using the Person Record Weight to provide national health estimates. For each health measure, both weighted frequencies and percentages (or rates) for all persons and for various subgroups of the population are shown. All counts are expressed in thousands. For a more straightforward presentation of the data, counts for persons of unknown status with respect to each health characteristic of interest are not shown separately in the tables, nor are they included in the calculation of percentages (or rates). For all health measures in this report, the weighted percentages with unknown values are typically small (generally 1% or less) and are shown in [Appendix I \(Tables II–IV\)](#). Nevertheless, these unknown cases are included in the total population counts shown in selected tables. Therefore, slightly different

percentages or rates than those shown in the tables may be obtained if percentages or rates are calculated based on the frequencies and population counts presented in the tables.

Additionally, some of the sociodemographic variables used to delineate various population subgroups have unknown values. For most of these variables, the percentage unknown is small. However, in the case of family income, no income information exists for about 5% of respondents in the 2011 survey, and about 17% of respondents provided only a broad range for their family’s income (see the “Income and Poverty Status Changes” section for more information). As a result, poverty status, which is based on family income, has a high nonresponse rate (see [Appendix I, Table IV](#)) (16). Missing data on family income and personal earnings in NHIS have been imputed by NCHS analysts using multiple-imputation methodology. Five ASCII data sets containing imputed values for the survey year and additional information about the imputed income files can be found at <http://www.cdc.gov/nchs/nhis.htm>. However, income and poverty estimates in the present report are based on reported income only and may differ from other measures that are based on imputed income data (which were not available when this report was prepared). Health estimates for persons with unknown sociodemographic characteristics are not shown in the tables. See [Appendix I](#) for more information on the extent of unknown data for income and poverty status.

## Injuries and Poisonings

Since 2004, imputation has been performed for injury and poisoning episodes for which the respondent did not provide sufficient information to determine a month, day, and year of occurrence. Imputation was done so that for all episodes it was possible to calculate a specific elapsed time, in days, between the date of the injury or poisoning episode and the date the injury or poisoning questions were asked.

From 1997 through 2003, injury and poisoning estimates were calculated using the full 3-month recall period to which the questions referred. A study by Warner et al. (17) showed that as the recall period increases, the annualized number of injuries and poisonings reported decreases because respondents tend to forget less serious injuries and poisonings. Based on recommendations from this study, beginning in 2004 injury and poisoning estimates have been calculated using only those injuries and poisonings that occurred 5 weeks or less before the date the injury and poisoning questions were asked.

Because of changes in the injury and poisoning section, imputation of unknown dates of injury and poisoning episodes, and the use of a 5-week reference period rather than a 3-month recall period to calculate annualized estimates used in this report, estimates for 2004 and subsequent years are not comparable with estimates from prior years. For further details about changes to the injury and poisoning questions and analytic methods, effective with 2004, see both the “Methods” section and [Appendix I](#) of the 2004 Summary Health Statistics report for the U.S. population (13).

## Transition to 2000 Census-based Weights

In Summary Health Statistics reports prior to 2003, weights for NHIS data were derived from 1990 census-based postcensal population estimates. Beginning with 2003 data, NHIS transitioned to weights derived from 2000 census-based population estimates. The impact of this transition was assessed for the 2002 NHIS by comparing estimates for selected health characteristics using the 1990 census-based weights with those using the 2000 census-based weights. Although the effect of new population controls on survey estimates differed by type of health characteristic, the effect of this change on health characteristic rates was small, but somewhat larger for weighted frequencies (18).

## Age Adjustment

Beginning with the 2002 report, estimates are provided in two sets of tables. Unless otherwise specified, percentages and rates in the first set (Tables 1–25) were age adjusted using the projected 2000 U.S. population as the standard population. Age adjustment was used to permit comparison among various sociodemographic subgroups that may have different age structures (19,20). Unless otherwise noted, the age groups used for age adjustment are the same age groups presented in the tables. The age-adjusted estimates in this report may not match age-adjusted estimates for the same health characteristic in other reports if different age groups were used for age adjustment or different record weights were used. [Appendix III](#) provides [Tables V–XIX](#) containing unadjusted estimates so that readers can compare current estimates with those published in the 1997–2001 Summary Health Statistics reports and can see the effects of age adjustment on the 2011 estimates (see [Appendix I](#) for details on age adjustment). Frequency tables have been removed from the set of unadjusted data tables in [Appendix III](#) to eliminate redundancy.

## Sample Size Changes in the National Health Interview Survey

In 2002–2004 and 2006–2008, the size of the NHIS sample was reduced due to budget shortfalls. Following a reduction of approximately 50% during January–March 2009, newly available funding later in 2009 permitted an expansion during October–December to expand that quarter’s normal sample size by approximately 50%. The net effect of the January–March reduction and the October–December expansion was that the 2009 NHIS sample size was approximately the same as it would have been if the sample had been maintained at a normal level during the entire calendar year.

In 2010, the NHIS sample was expanded by approximately 25% during January–March. No further expansions

or reductions were made in the remaining months of that year.

In 2011, the NHIS sample was augmented in 32 states and the District of Columbia. The main goal of the augmentation was to increase the number of reliable state-level estimates that can be made. The 2011 NHIS sample size is the largest since the current sample design was implemented in 2006.

## Income and Poverty Status Changes

Starting with the 2007 NHIS, the income amount follow-up questions that had been in place since 1997 were replaced with a series of unfolding bracket questions. This decision was based on the relatively poor performance of the 1997–2006 versions of the follow-up income amount questions and on the results of a 2006 field test that compared unfolding bracket follow-up questions with the income amount follow-up questions used since 1997. Further information about the 2006 field test is available in [Appendix I](#).

The unfolding bracket method utilized a series of closed-ended income range questions (e.g., “Is it less than \$50,000?”) for respondents who failed to provide the exact amount of the family’s income. The closed-ended income range questions were constructed so that each successive question established a smaller range for the amount of the family’s income in the last calendar year.

Based on results from the 2006 field test, the unfolding bracket follow-up income questions performed better than the follow-up income questions used from 1997 to 2006. For example, the percentage of unknown responses for a three-category poverty status variable was 17% using the income bracket follow-up questions compared with 31% using the income follow-up questions used from 1997 through 2006.

Because of these positive results, the unfolding bracket income follow-up questions were implemented during the first quarter of the 2007 NHIS. Because of the differences in the income follow-up

questions between 1997–2006 and 2007–2011, income and poverty status estimates from 2007–2011 may not be comparable with those from prior years.

## Data Limitations

The redesigned NHIS is quite different in content, format, and mode of data collection from earlier versions of the survey. These changes can make it complex to compare 1997–2011 NHIS estimates with those of earlier years. The 2006–2011 NHIS is based on a different sample design—including the oversampling of the Asian population and of Hispanic, black, or Asian sample adults at least 65 years of age, as well as a permanent sample reduction of 13%—compared with the 1997–2005 NHIS. The change in sample design should be considered when comparing estimates from the 2006–2011 NHIS with those from earlier years. Beginning in 2003, NHIS uses weights derived from the 2000 census-based population estimates. Those who compare NHIS frequencies across this transition (e.g., comparing 2005 with 2002) must recognize that some of the observed differences may be due to the change in population estimates. Unadjusted percentage estimates shown in the [Appendix III](#) tables may be compared with those published in Summary Health Statistics reports of 1997–2001, which did not contain age-adjusted estimates. Age-adjusted estimates in this report should not be compared with earlier unadjusted estimates unless it can be demonstrated that the effect of age adjustment is minimal.

Note that frequencies are underestimates due to item nonresponse and unknowns, both of which are excluded from the tables (with the exception of the “All persons” or “Total” columns). [Appendix I](#), [Tables II–IV](#), provide more information about the number of unknowns with respect to each health characteristic.

Estimates should be interpreted only after reviewing [Appendix I](#), which contains important information about the methods used to obtain the estimates, changes in the survey instrument, and measurement issues that are currently being evaluated.

## Variance Estimation and Significance Testing

Because NHIS data are based on a sample of the population, they are subject to sampling error. Standard errors are reported to indicate the reliability of the estimates. Estimates and standard errors were calculated using SUDAAN software (21), which takes into account the complex sampling design of NHIS. The Taylor series linearization method was used for variance estimation in SUDAAN.

Standard errors are shown for all rates and percentages in the tables, but not for the frequencies. Estimates with a relative standard error greater than 30% and less than or equal to 50% are indicated with an asterisk (\*) and should be used with caution as they do not meet standards of reliability or precision. Estimates with a relative standard error greater than 50% are indicated with a dagger (†) and are not shown. The statistical significance of differences between point estimates was evaluated using two-sided *t* tests at the 0.05 level and assuming independence. Terms such as “greater than,” “less than,” “more likely,” “less likely,” “compared with,” or “opposed to” indicate a significant difference between estimates, whereas “similar,” “no difference,” or “comparable” indicate that the estimates are not significantly different. A lack of commentary about any two estimates should not be interpreted to mean that a *t* test was performed and the difference was found to be not significant. Furthermore, these tests did not take into account multiple comparisons. Estimates for population subgroups with small sample sizes may fluctuate considerably from year to year due to sampling variability.

## Further Information

The latest information about NHIS is available at: <http://www.cdc.gov/nchs/nhis.htm>. This website features downloadable public-use data and documentation for NHIS, as well as important information about any

modifications or updates to the data or documentation.

Readers may also wish to join the NHIS electronic mailing list by visiting: <http://www.cdc.gov/subscribe.html>.

Complete the appropriate information and click the “National Health Interview Survey (NHIS) researchers” box, followed by the “Subscribe” button at the bottom of the page. The list is made up of approximately 4,000 NHIS data users worldwide who receive e-news about NHIS surveys (e.g., new releases of data or modifications to existing data), publications, conferences, and workshops.

## Selected Highlights

This section presents brief bulleted summaries of the estimates shown in [Tables 1–25](#). Estimated percentages and rates were age adjusted by the direct method using the projected 2000 U.S. population as the standard population. In most cases, the age groups used to adjust estimated percentages and rates are the same age groups presented in the tables (see table notes for age-adjustment groups). All estimates were calculated using the Person Record Weight variable, which is calibrated by NCHS staff to produce numbers consistent with the population estimates of the United States by age, sex, and race/ethnicity, based on projections from the 2000 U.S. Census.

### Respondent-assessed Health Status ([Tables 1 and 2](#))

- Nearly 7 in 10 persons were in excellent or very good health, and fewer than 1 in 10 persons were in fair or poor health.
- Nearly 3 in 10 adults aged 75 and over were in fair or poor health.
- White (37%) and Asian (36%) persons were more likely than black persons (31%) to be in excellent health.
- The percentage of persons in excellent health increased with increased levels of education and family income.

- College graduates (38%) were more than twice as likely as persons who had not graduated from high school (18%) to be in excellent health.
- Persons with family incomes of \$100,000 or more (49%) were almost twice as likely as those with family incomes of less than \$35,000 (27%) to be in excellent health.
- Among persons under age 65, those with private health insurance were more likely than those with other types of health insurance, and those who were uninsured, to be in excellent health.
- Persons who lived in a metropolitan statistical area (MSA) were more likely than those who did not live in an MSA to be in excellent health.

### Limitation in Usual Activities ([Tables 3 and 4](#))

- About 40.3 million persons (13%) were limited in their usual activities due to one or more chronic health conditions.
- Prevalence of limitation in usual activities due to one or more chronic conditions increased with age: 7% of children under age 12 had an activity limitation compared with 17% of adults aged 45–64, 26% of adults aged 65–74, and 46% of adults aged 75 and over.
- Asian persons were the least likely to be limited in their usual activities due to one or more chronic conditions compared with white, black, American Indian or Alaska Native, and Native Hawaiian or Other Pacific Islander persons.
- Persons with the least education and the lowest family incomes were the most likely to have an activity limitation.
- Persons under age 65 who had private health insurance, as well as those who were uninsured, were less likely than persons who had Medicaid and those who had some other type of health insurance to have an activity limitation.
- Persons aged 65 and over with both Medicare and Medicaid were more likely to have an activity limitation than those with private health

insurance, Medicare only, and some other type of health care coverage.

## Limitation in Activities of Daily Living and Instrumental Activities of Daily Living (Table 5)

- About 5.2 million adults (2%) required the help of another person with activities of daily living (ADLs) such as eating, dressing, or bathing, and 9.8 million (4%) required help with instrumental activities of daily living (IADLs) such as household chores or shopping.
- Among adults aged 75 and over, about 12% required the help of another person with ADLs and 20% required help with IADLs.
- Poor adults were at least three times as likely as those who were not poor to require help with ADLs and IADLs.
- Persons under age 65 who had private health insurance, as well as those who were uninsured, were less likely to need help with ADLs or IADLs than were persons who had Medicaid and those who had some other type of health insurance.
- Among persons aged 65 and over, those who had both Medicaid and Medicare were about twice as likely as those with private health insurance, Medicare only, and some other type of health care coverage to need help with ADLs and IADLs.

## Limitation in Work Activity (Table 6)

- About 13.8 million adults aged 18–69 (6%) were unable to work due to health problems, and 6.8 million (3%) were limited in the kind or amount of work they could do because of their health.
- Persons aged 45–64 and 65–69 were about three times as likely to be unable to work due to health reasons as persons aged 18–44.
- About 3% of Asian adults aged 18–69 were unable to work for health reasons compared with 6%

of white adults and 9% of black adults.

- Persons with the least education and the lowest incomes were the most likely to be unable to work due to health problems.
- Persons under age 65 who had private health insurance were less likely to be limited in their work activity than persons who had Medicaid and those who had other types of health insurance.
- Poor non-Hispanic white persons (22%) and poor non-Hispanic black persons (21%) were about twice as likely as poor Hispanic persons (10%) to be unable to work.

## Special Education or Early Intervention Services (Table 7)

- About 5.2 million children under age 18 were receiving special education or early intervention services in 2011.
- Overall, 7% of U.S. children received special education or early intervention services, with boys being almost twice as likely as girls to receive such services.
- Children in poor families (9%) were more likely than children in not-poor families (6%) to receive special education or early intervention services.
- Children covered by Medicaid (9%) were more likely than children with private health insurance (6%), with other types of insurance (6%), and without any health insurance (4%) to receive special education or early intervention services.
- Children in the Northeast (10%) and Midwest (9%) were more likely than children in the South (6%) and West (6%) to receive special education or early intervention services.
- Non-Hispanic white children who were poor (12%) and near poor (9%) were more likely than those who were not poor (7%) to receive special education or early intervention services.
- Poor Hispanic children (6%) were less likely than poor non-Hispanic white (12%) and non-Hispanic black

children (10%) to receive special education or early intervention services.

## Incidence of Medically Consulted Injury and Poisoning Episodes (Table 8)

- In 2011, there were 37.9 million medically consulted injury and poisoning episodes among the U.S. civilian noninstitutionalized population—a rate of 124 episodes per 1,000 population per year.
- The rate of medically consulted injury and poisoning episodes among white persons (129 per 1,000 population) was higher than the rates among black persons (97 per 1,000) and Asian persons (68 per 1,000).
- The rate of medically consulted injury and poisoning episodes among non-Hispanic persons (133 per 1,000 population) was higher than the rate for Hispanic persons (77 per 1,000).
- Persons who were in poor health had higher rates of medically consulted injury and poisoning episodes than persons who had excellent, very good, good, or fair health.

## Causes of Injury and Poisoning Episodes (Tables 9 and 10)

- The four leading external causes of medically consulted injury episodes were falls (13.4 million episodes in 2011), overexertion (4.6 million episodes), being struck by a person or an object (4.6 million episodes), and transportation (4.1 million episodes).
- For females, the rate of injury resulting from a fall was higher than the rate for males.
- For non-Hispanic white persons, the rate of injury due to a fall was higher than the rate for non-Hispanic black persons and Hispanic persons.

## Activity at Time of Injury and Poisoning Episodes (Tables 11 and 12)

- About 7.3 million medically consulted injury and poisoning episodes occurred while engaging in nonsport leisure activities, 6.1 million while participating in sports, 5.4 million while working around the house or yard, and 4.2 million while working at a paid job.
- The rate of medically consulted injury and poisoning episodes that occurred while engaging in nonsport leisure activities was higher for non-Hispanic white persons than for non-Hispanic black and for Hispanic persons.

## Place of Occurrence of Injury and Poisoning Episodes (Tables 13 and 14)

- In 2011, more than one-half of the 37.9 million medically consulted injury and poisoning episodes occurred in or around the home, with 12.3 million episodes occurring inside and 6.9 million occurring outside the home.
- Recreation areas (4.7 million episodes) and streets and highways (4.0 million episodes) were the third and fourth most common locations for medically consulted injuries and poisonings.
- The rate of medically consulted injury and poisoning episodes occurring inside the home was higher for females than for males, and the rate occurring outside the home and at recreation areas was higher for males than for females.
- The rate of medically consulted injury and poisoning episodes occurring inside the home was higher for persons aged 65–74 and 75 and over than for persons under age 12.
- The rates of medically consulted injury and poisoning episodes occurring inside the home and outside the home were nearly twice as high for non-Hispanic persons as for Hispanic persons.
- The rate of medically consulted injury and poisoning episodes

occurring in recreation areas was higher for persons in the highest income group than for those in the lowest income group.

## Access to Medical Care (Table 15)

- About 27.4 million persons (9%) delayed seeking medical care in the last year due to cost, and 20.0 million (6%) did not receive needed care due to the cost of care.
- Adults aged 18–44 and 45–64 were more likely than older adults and children to delay seeking or not receive medical care due to cost.
- Persons with the least education were about three times as likely as persons with the most education to have not received needed medical care due to cost, and they were more than twice as likely to have delayed seeking care for this reason.
- Persons in the lowest income group were about 13 times as likely as persons in the highest income group to not receive needed medical care due to cost and about 7 times as likely to delay seeking medical care.
- Persons under age 65 who were uninsured were about three times as likely as persons who had Medicaid and persons who had other insurance to delay seeking or not receive needed medical care due to cost.
- Persons who were in fair or poor health were about three to four times as likely as persons who were in excellent or very good health to delay seeking or not receive needed medical care due to cost.

## Overnight Hospital Stays (Tables 16 and 17)

- About 18.0 million persons (6%) had stayed overnight in the hospital once in the past 12 months, about 3.7 million (1%) had stayed overnight on two occasions, and about 2.6 million (less than 1%) had three or more overnight hospital stays during the year.
- Persons aged 65 and over were more likely than younger persons to

have stayed in the hospital overnight in the past 12 months.

- Persons with the lowest incomes were more likely to have stayed overnight in the hospital than persons with higher incomes.
- Among persons under age 65, those with Medicaid (8%) were more likely than those who had private health insurance (5%) and those who were uninsured (3%) to have stayed overnight in the hospital once in the past year.

## Type of Health Insurance Coverage (Tables 18 and 19)

- Among persons under age 65, 163 million (61%) had private health insurance, 45 million (17%) were uninsured, and 46 million (18%) had Medicaid.
- Children under age 12 were the most likely to have Medicaid coverage compared with persons in other age groups, and adults aged 18–44 were the most likely to be uninsured.
- Among persons under age 65, white and Asian persons were more likely than black persons and American Indian or Alaska Native persons to have private health insurance coverage.
- Hispanic persons under age 65 (33%) were more than twice as likely as non-Hispanic persons in that age group (14%) to be uninsured.
- Among poor persons under age 65, about 5 in 10 had Medicaid coverage and about 3 in 10 were uninsured.
- Persons under age 65 who were in fair or poor health were nearly three times as likely as persons in that age group who were in excellent or very good health to have Medicaid coverage.
- Health insurance coverage is nearly universal among persons aged 65 and over, although the types of coverage vary by demographic characteristics.
- Among the 40 million adults aged 65 and over in 2011, 20.7 million (52%) had private health insurance and 13.0 million (33%) had Medicare alone.

About 428,000 persons aged 65 and over (1%) were uninsured in 2011. Among persons aged 65 and over who were poor, 39% were covered by Medicare only, 35% were covered by Medicaid and Medicare combined, and 16% were covered by private health insurance.

Among persons aged 65 and over who were not poor, 61% were covered by private health insurance and 28% were covered by Medicare only.

### Periods Without Health Insurance Coverage Among Currently Insured Persons Under Age 65 (Tables 20 and 21)

- Among persons under age 65 who were currently covered by health insurance, approximately 206 million (94%) had health insurance continuously over the preceding 12-month period.
- Among currently insured persons under age 65, about 6% had been without insurance at some time in the past year—most of these for 6 months or less.
- Currently insured adults aged 18–44 were more likely than younger persons and adults aged 45–64 to have experienced a period without health insurance in the past year.
- Poor and near-poor persons under age 65 who had health insurance were more than twice as likely as not-poor persons to have been without health insurance at some time in the past year.

### Length of Time Since Last Covered by Health Insurance Among Currently Uninsured Persons Under Age 65 (Tables 22 and 23)

- Among persons under age 65 who were uninsured at the time of the interview, about 15 million (31%) had been without health insurance for more than 36 months and about 9 million (21%) had never had

coverage.

- Uninsured males (24%) were more likely than uninsured females (18%) to have never had health insurance.
- Uninsured children under age 12 were the most likely to have been without insurance for 6 months or less compared with persons aged 12–17, 18–44, and 45–64.
- Uninsured persons aged 45–64 were the most likely to have been without health insurance for more than 36 months compared with younger persons.
- Among persons who were not covered by health insurance, Hispanic persons (40%) were more than three times as likely as non-Hispanic persons (12%) to have never had health insurance coverage.

### Reasons for No Health Insurance Coverage Among Currently Uninsured Persons Under Age 65 (Tables 24 and 25)

- Among persons under age 65 who were without health insurance coverage, 19.1 million (43%) lacked coverage due to cost and 11.9 million (27%) lacked coverage due to a change in employment.
- Uninsured females were about twice as likely as uninsured males to not have coverage due to a change in marital status or the death of a parent.
- Uninsured children under age 12 (34%) were nearly six times as likely as adults aged 45–64 (6%) to not have coverage due to cessation of Medicaid and other public coverage.
- Uninsured non-Hispanic persons (32%) were about twice as likely as Hispanic persons (17%) to be without health insurance coverage due to loss of a job or a change in employment.
- Uninsured persons with a high school diploma or higher education were about one and one-half to two times as likely as persons who had not graduated from high school to be without health insurance

coverage due to loss of a job or a change in employment.

Not poor . . . . .	15,920	5,460	4,893	4,176	1,160	225

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the question, "Would you say [person's] health in general is excellent, very good, good, fair, or poor?"

<sup>2</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons" column.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>Based on the question, "Would you say [person's] health in general is excellent, very good, good, fair, or poor?"

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>Estimates for age groups are not age adjusted.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 25–44, 45–64, 65–74, and 75 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using six age groups: 0–11, 12–17, 18–44, 45–64, 65–74, and 75 and over. For crude percentages, refer to Table V in Appendix III.

Not poor . . . . .	15,920	14,433	1,465	1,409

<sup>1</sup>Based on a series of questions concerning: limitation(s) in a person's ability to engage in work, school, play, or other activities for health reasons; the specific conditions causing the limitation(s); and the duration of these condition(s). Conditions lasting more than 3 months are classified as chronic; selected conditions (e.g., arthritis, diabetes, cancer, and heart conditions) are considered chronic regardless of duration.

<sup>2</sup>A subset of the category "Limited."

<sup>3</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons" column.

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Not poor . . . . .	100.0	90.0 (0.43)	10.0 (0.43)	9.6 (0.43)

<sup>1</sup>Based on a series of questions concerning: limitation(s) in a person's ability to engage in work, school, play, or other activities for health reasons; the specific conditions causing the limitation(s); and the duration of these condition(s). Conditions lasting more than 3 months are classified as chronic; selected conditions (e.g., arthritis, diabetes, cancer, and heart conditions) are considered chronic regardless of duration.

<sup>2</sup>A subset of the category "Limited."

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

<sup>4</sup>Percentages may not add to totals due to rounding.

<sup>5</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>6</sup>Estimates for age groups are not age adjusted.

<sup>7</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>8</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>9</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>10</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 25–44, 45–64, 65–74, and 75 and over.

<sup>11</sup>GED is General Educational Development high school equivalency diploma.

<sup>12</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>13</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>14</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>15</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using six age groups: 0–11, 12–17, 18–44, 45–64, 65–74, and 75 and over. For crude percentages, refer to Table VI in Appendix III.

. . . Category not applicable.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% but less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>ADLs are activities of daily living. Limitation in ADLs is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons with PERSONAL CARE NEEDS, such as eating, bathing, dressing, or getting around inside the home?"

<sup>2</sup>IADLs are instrumental activities of daily living. Limitation in IADLs is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons in handling ROUTINE NEEDS, such as everyday household chores, doing necessary business, shopping, or getting around for other purposes?"

<sup>3</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons aged 18 and over" column.

<sup>4</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

<sup>5</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>6</sup>Estimates for age groups are not age adjusted.

<sup>7</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>8</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>9</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>10</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 25–44, 45–64, 65–74, and 75 and over.

<sup>11</sup>GED is General Educational Development high school equivalency diploma.

<sup>12</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>13</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>14</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using two age groups: 18–44 and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>15</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 18–44, 45–64, 65–74, and 75 and over. For crude percentages, refer to Table VII in Appendix III.

. . . Category not applicable.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% but less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the questions, "Does a physical, mental, or emotional problem NOW keep [family members 18 years of age or older] from working at a job or business?" and for persons not kept from working, "Are [family members 18 years of age and older] limited in the kind or amount of work they can do because of a physical, mental, or emotional problem?"<sup>2</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons aged 18–69" column.<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.<sup>5</sup>Estimates for age groups are not age adjusted.<sup>6</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.<sup>7</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.<sup>8</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.<sup>9</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using three age groups: 25–44, 45–64, and 65–69.<sup>10</sup>GED is General Educational Development high school equivalency diploma.<sup>11</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.<sup>12</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.<sup>13</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using two age groups: 18–44 and 45–64, for persons under age 65. Estimates for persons aged 65 and over are not age adjusted.<sup>14</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using three age groups: 18–44, 45–64, and 65–69. For crude percentages, refer to Table VIII in Appendix III.

Near poor . . . . .	6,879	626	9.2 (0.80)
Not poor . . . . .	25,220	1,753	6.9 (0.36)
Black or African American, single race:			
Poor . . . . .	3,586	339	10.0 (1.08)
Near poor . . . . .	2,181	156	7.0 (1.00)
Not poor . . . . .	3,339	175	5.1 (0.74)

. . . Category not applicable.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>Based on the question, "Do any of the following [family members 18 years of age or older] receive Special Education or Early Intervention Services?"

<sup>2</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons under age 18" column.

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>5</sup>Estimates for age groups are not age adjusted.

<sup>6</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>7</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>8</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using two age groups: 0–11 and 12–17. For crude percentages, refer to Table IX in Appendix III.

... Category not applicable.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the questions, "Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?" and "Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?" Counts and rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons" column.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.

<sup>4</sup>Estimates for age groups are not age adjusted.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 25–44, 45–64, 65–74, and 75 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using six age groups: 0–11, 12–17, 18–44, 45–64, 65–74, and 75 and over. For crude rates, refer to Table X in Appendix III.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the questions, "Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?" and "Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?" Injury and poisoning episodes are classified according to the external cause of the episode using categories based on the *International Classification of Diseases, 9th revision, Clinical Modification* (ICD-9-CM) external cause codes (E codes). The category "Transportation" includes motor vehicle, bicycle, motorcycle, pedestrian, train, boat, and airplane. The category "Other" includes fire/burn/scald-related, animal or insect bite, machinery, and other (not specified). The category "Poisoning" excludes food poisoning and allergic reaction. Counts of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared to estimates from prior years.

<sup>2</sup>Includes unknown causes.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

West . . . . .	44.99 (4.79)	16.29 (2.95)	15.41 (3.17)	20.38 (3.39)	10.02 (2.29)	30.00 (4.13)		†

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the questions, “Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?” and “Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?” Injury and poisoning episodes are classified according to the external cause of the episode using categories based on the *International Classification of Diseases, 9th revision, Clinical Modification* (ICD–9–CM) external cause codes (E codes). The category “Transportation” includes motor vehicle, bicycle, motorcycle, pedestrian, train, boat, and airplane. The category “Other” includes fire/burn/scald related, animal or insect bite, machinery, and other (not specified). The category “Poisoning” excludes food poisoning and allergic reaction. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Includes unknown causes.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>Estimates for age groups are not age adjusted.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “One race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “One race” but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “One race, Black or African American” in the tables is referred to as “black persons” in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 25–44, 45–64, 65–74, and 75 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories “Less than \$35,000” and “\$35,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using six age groups: 0–11, 12–17, 18–44, 45–64, 65–74, and 75 and over. For crude rates, refer to Table XI in Appendix III.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

– Quantity zero.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the question, "What activity was [person] involved in at the time of the injury/poisoning?" Respondents could indicate up to two activities. Counts of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Includes both drivers and passengers.

<sup>3</sup>Includes unpaid work such as housework, shopping, volunteer work, sleeping, resting, eating, drinking, cooking, hands-on care from another person, and other unspecified activities.

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

— Quantity zero.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the question, "What activity was [person] involved in at the time of the injury/poisoning?" Respondents could indicate up to two activities. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Includes both drivers and passengers.

<sup>3</sup>Includes unpaid work such as housework, shopping, volunteer work, sleeping, resting, eating, drinking, cooking, hands-on care from another person, and other unspecified activities.

<sup>4</sup>Unknowns were excluded from the denominator when calculating rates.

<sup>5</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>6</sup>Estimates for age groups are not age adjusted.

<sup>7</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>8</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>9</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>10</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 25–44, 45–64, 65–74, and 75 and over.

<sup>11</sup>GED is General Educational Development high school equivalency diploma.

<sup>12</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>13</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>14</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>15</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using six age groups: 0–11, 12–17, 18–44, 45–64, 65–74, and 75 and over. For crude rates, refer to Table XII in Appendix III.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>Based on the question, "Where was [person] when the injury/poisoning happened?" Respondents could indicate up to two places. Counts of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>3</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>4</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>5</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>6</sup>Shown only for persons aged 25 and over.

<sup>7</sup>GED is General Educational Development high school equivalency diploma.

<sup>8</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>9</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

– Quantity zero.

<sup>1</sup>Based on the question, "Where was [person] when the injury/poisoning happened?" Respondents could indicate up to two places. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Unknowns were excluded from the denominator when calculating rates.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>Estimates for age groups are not age adjusted.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 25–44, 45–64, 65–74, and 75 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using six age groups: 0–11, 12–17, 18–44, 45–64, 65–74, and 75 and over. For crude rates, refer to Table XIII in Appendix II.

. . . Category not applicable.

<sup>\*</sup> Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.<sup>1</sup>Based on the question, "DURING THE PAST 12 MONTHS, was there any time when [person] needed medical care, but did not get it because [person] couldn't afford it?" (Excludes dental care.)<sup>2</sup>Based on the question, "DURING THE PAST 12 MONTHS, has [person] delayed seeking medical care because of worry about the cost?" (Excludes dental care.)<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.<sup>5</sup>Estimates for age groups are not age adjusted.<sup>6</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group.

Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the

category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>7</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>8</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>9</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using three age groups: 25–44, 45–64, and 65 and over.

<sup>10</sup>GED is General Educational Development high school equivalency diploma.

<sup>11</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>13</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>14</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using five age groups: 0–11, 12–17, 18–44, 45–64, and 65 and over. For crude percentages, refer to Table XIV in Appendix III. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the questions: "During the past 12 months was [person] a patient in a hospital overnight?" and "How many different times did [person] stay in any hospital overnight or longer during the past 12 months?" Hospital stays due to childbirth are included, but overnight stays in an emergency room are excluded. NCHS analysts have ascertained that hospitalizations for newborns with a normal birth, and for women with a normal delivery, have been undercounted (see Appendix I).

<sup>2</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All persons" column.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Near poor . . . . .	100.0	90.7 (0.61)	6.5 (0.53)	1.4 (0.26)	1.3 (0.23)
Not poor . . . . .	100.0	92.8 (0.37)	4.8 (0.30)	1.5 (0.17)	0.9 (0.16)

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the questions: "During the past 12 months was [person] a patient in a hospital overnight?" and "How many different times did [person] stay in any hospital overnight or longer during the past 12 months?" Hospital stays due to childbirth are included, but overnight stays in an emergency room are excluded. NCHS analysts have ascertained that hospitalizations for newborns with a normal birth, and for women with a normal delivery, have been undercounted (see Appendix I).

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>Estimates for age groups are not age adjusted.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using three age groups: 25–44, 45–64, and 65 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U. S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II). Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64, for persons under age 65, and using two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using five age groups: 0–11, 12–17, 18–44, 45–64, and 65 and over. For crude percentages, refer to Table XV in Appendix III.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question, “What kind of health insurance or health care coverage does [person] have? INCLUDE those that pay for only one type of service (nursing home care, accidents, or dental care), exclude private plans that only provide extra cash while hospitalized.” Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>2</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the “All persons” columns.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and current health status.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “One race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “One race” but are not shown separately due to small sample sizes. Therefore, the frequencies for the category “One race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “One race, Black or African American” in the tables is referred to as “black persons” in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “Two or more races” will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories “Less than \$35,000” and “\$35,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

... Category not applicable.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question, "What kind of health insurance or health care coverage does [person] have? INCLUDE those that pay for only one type of service (nursing home care, accidents, or dental care), exclude private plans that only provide extra cash while hospitalized." Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and current health status.

<sup>4</sup>Estimates for age groups are not age adjusted.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using two age groups: 25–44 and 45–64, for persons under age 65, and two age groups: 65–74 and 75 and over, for persons aged 65 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, for persons under age 65, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64. For persons aged 65 and over, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using age two groups: 65–74 and 75 and over. For crude percentages, refer to Table XVI in Appendix III.

**Table 20. Frequency distribution of any period without health insurance coverage during the past 12 months, and frequencies of persons who were without coverage for 6 months or less or for 7–12 months, among currently insured persons under age 65, by selected characteristics: United States, 2011—Con.**

Selected characteristic	All currently insured persons under age 65	Any period without coverage <sup>1</sup>		Duration of period without coverage <sup>2</sup>	
		No	Yes	6 months or less	7–12 months
Hispanic or Latino origin <sup>7</sup> , race, and sex					
Number in thousands <sup>3</sup>					
Hispanic or Latino, male . . . . .	16,180	15,011	1,083	686	383
Hispanic or Latina, female . . . . .	16,181	14,908	1,180	737	436
Not Hispanic or Latino:					
White, single race, male . . . . .	70,669	66,863	3,634	2,558	1,036
White, single race, female . . . . .	72,582	68,843	3,611	2,532	1,036
Black or African American, single race, male . . . . .	12,270	11,495	726	481	237
Black or African American, single race, female . . . . .	14,549	13,495	980	640	325
Hispanic or Latino origin <sup>7</sup> , race, and poverty status					
Hispanic or Latino:					
Poor . . . . .	7,773	7,025	680	429	250
Near poor . . . . .	7,600	6,808	749	453	286
Not poor . . . . .	13,484	12,773	679	442	234
Not Hispanic or Latino:					
White, single race:					
Poor . . . . .	12,103	10,891	1,151	756	366
Near poor . . . . .	15,877	14,125	1,730	1,177	554
Not poor . . . . .	102,427	98,559	3,778	2,799	963
Black or African American, single race:					
Poor . . . . .	6,574	6,046	515	282	221
Near poor . . . . .	4,720	4,262	437	288	147
Not poor . . . . .	12,596	11,981	592	451	138

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question (asked of persons who currently had health insurance coverage), “In the PAST 12 MONTHS, was there any time when [person] did NOT have ANY health insurance or coverage?”

<sup>2</sup>Based on the question (asked of persons who currently had health insurance coverage), “In the PAST 12 MONTHS, about how many months was [person] without coverage?”

<sup>3</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the “All currently insured persons under age 65” column, and unknowns for duration of noncoverage are included in the “yes” column.

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “One race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “One race” but are not shown separately due to small sample sizes. Therefore, the frequencies for the category “One race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “One race, Black or African American” in the tables is referred to as “black persons” in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “Two or more races” will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories “Less than \$35,000” and “\$35,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question (asked of persons who currently had health insurance), “In the PAST 12 MONTHS, was there any time when [person] did NOT have ANY health insurance or coverage?”

<sup>2</sup>Based on the question (asked of persons who currently had health insurance), “In the PAST 12 MONTHS, about how many months was [person] without coverage?”

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>4</sup>Persons having any period without health insurance coverage includes persons with unknown duration of period without coverage.

<sup>5</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>6</sup>Estimates for age groups are not age adjusted.

<sup>7</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “One race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “One race” but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “One race, Black or African American” in the tables is referred to as “black persons” in the text.

<sup>8</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>9</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>10</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using two age groups: 25–44 and 45–64.

<sup>11</sup>GED is General Educational Development high school equivalency diploma.

<sup>12</sup>The categories “Less than \$35,000” and “\$35,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>13</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>14</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64. For crude percentages, refer to Table XVII in Appendix III.

Near poor . . . . .	1,596	243	191	344	542	229
Not poor . . . . .	1,764	307	246	401	517	183

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the question (asked of persons currently without health insurance coverage), "Not including Single Service Plans, about how long has it been since [person] last had health care coverage?"

<sup>2</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All currently uninsured persons under age 65" column.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Poor . . . . .	100.0	18.0 (3.04)	13.0 (2.80)	21.9 (2.95)	33.3 (2.17)	13.8 (1.99)
Near poor . . . . .	100.0	21.4 (3.24)	13.7 (2.37)	20.0 (2.00)	32.0 (2.86)	13.0 (1.80)
Not poor . . . . .	100.0	22.7 (4.21)	13.1 (2.02)	24.0 (3.35)	27.4 (2.67)	12.8 (3.50)

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the question (asked of persons currently without health insurance coverage), "Not including Single Service Plans, about how long has it been since [person] last had health care coverage?"

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>4</sup>Estimates for age groups are not age adjusted.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using two age groups: 25–44 and 45–64.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64. For crude percentages, refer to Table XVIII in Appendix III.

**Table 24. Frequency of currently uninsured persons under age 65, by selected reasons for no health insurance coverage and by selected characteristics: United States, 2011—Con.**

Selected characteristic	All currently uninsured persons under age 65	Selected reasons for no health insurance coverage <sup>1</sup>						
		Lost job or change in employment	Change in marital status or death of parent	Ineligible due to age or left school	Employer didn't offer or insurance company refused	Cost	Medicaid stopped	Other <sup>2</sup>
Region		Number in thousands <sup>3</sup>						
Northeast . . . . .	5,346	1,220	90	454	576	2,394	446	406
Midwest . . . . .	8,160	2,612	260	811	999	2,777	905	435
South . . . . .	19,547	5,130	523	1,707	2,058	8,413	2,311	1,161
West . . . . .	12,323	2,943	271	1,047	1,513	5,533	1,381	709

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question, "Which of these are reasons [person] stopped being covered or does not have health insurance?" Persons may report more than one reason.

<sup>2</sup>"Other" includes moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons.

<sup>3</sup>Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "All currently uninsured persons under age 65" column.

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Therefore, the frequencies for the category "One race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "Two or more races" will be greater than the sum of the frequencies for the specific combinations shown separately.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

West . . . . .	25.4 (1.17)	2.2 (0.28)	7.0 (0.46)	12.1 (0.76)	47.7 (1.39)	14.7 (1.02)	6.5 (0.67)

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question, "Which of these are reasons [person] stopped being covered or does not have health insurance?" Persons may report more than one reason. In columns that include more than one reason, persons are counted only once.

<sup>2</sup>"Other" includes moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons.

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>5</sup>Estimates for age groups are not age adjusted.

<sup>6</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>7</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>8</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>9</sup>Shown only for persons aged 25 and over. Estimates are age adjusted using the projected 2000 U.S. population as the standard population and using two age groups: 25–44 and 45–64.

<sup>10</sup>GED is General Educational Development high school equivalency diploma.

<sup>11</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. Unless otherwise specified, estimates are age adjusted using the projected 2000 U.S. population as the standard population and using four age groups: 0–11, 12–17, 18–44, and 45–64. For crude percentages, refer to Table XIX in Appendix III.

## Appendix I. Technical Notes on Methods (including Tables I–IV)

This report is one of a set of statistical reports published by the staff of the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS). It is based on data contained in the 2011 in-house Person File that are derived from the Family Core component of the National Health Interview Survey (NHIS). All estimates were weighted using the Person Record Weight and the in-house data file. The detailed sample design information was used to produce the most accurate variance estimates possible. Note that estimates and variances may differ depending on the weight used.

All data used in the report are also available from the NHIS public-use data files (15), with the exception of detailed information on race and Hispanic or Latino origin, place of residence, and sample design. Detailed sample design variables, place of residence variables, and detailed information on race and Hispanic or Latino origin cannot be made available on the public-use files due to the potential for disclosure of confidential information.

Standard errors (SEs) produced using the SUDAAN statistical package (21) are shown for all percentages and rates in the tables. SEs for frequencies are calculated but are not shown. Percentages and rates with a relative standard error (RSE) greater than 30% and less than or equal to 50% are indicated with an asterisk (\*) and should be used with caution as they do not meet standards of reliability or precision. Percentages and rates with an RSE greater than 50% are indicated with a dagger (†) and are not shown. RSEs are calculated as:

$$\text{Relative standard error} = (\text{SE}/\text{Est})100,$$

where SE is the standard error of the estimate and Est is the estimate (percent or rate). Because the reliability of frequencies and the reliability of the corresponding percentages (or rates) are determined independently, it is possible for a particular frequency to be reliable and its associated percentage (or rate) to be unreliable,

and vice versa. In most instances, however, both estimates were reliable (or unreliable) simultaneously.

### Age Adjustment

Unless otherwise specified, the percentages and rates shown in [Tables 1–25](#) were age adjusted using the projected 2000 U.S. population as the standard population provided by the U.S. Census Bureau (19,20). Age adjustment was used to allow comparison among various population subgroups that have different age structures. This is particularly important for demographic characteristics such as race and ethnicity, education, and marital status. It is also helpful in regard to other characteristics.

Age-adjusted rates are calculated by the direct method as:

$$\text{Est} = \frac{\sum_{i=1}^n r_i p_i}{\sum_{i=1}^n p_i},$$

where  $r_i$  = rate in age group  $i$  in the population of interest,  
 $p_i$  = standard population in age group  $i$ ,  
 $n$  = total number of age groups used for age adjustment,

and

Est = age-adjusted rate.

The standard age distribution used for age adjusting estimates from NHIS is the projected 2000 U.S. population. [Table I](#) provides the age distributions used in the DESCRIPT and RATIO procedures of SUDAAN to perform age adjustment. Unless otherwise noted, the age groups used to adjust estimates are the same age groups presented in the tables. Health insurance and education are restricted to certain age groups and are therefore adjusted accordingly (for age groups used, see relevant table footnotes). Using different age groups for age adjustment may result in slightly different estimates. For this reason, age-adjusted estimates for health characteristics in this report may not

match age-adjusted estimates for the same health characteristics in other reports. Unadjusted estimates were also calculated and are provided in [Appendix III, Tables V–XIX](#).

For more information on the derivation of age-adjustment weights for use with NCHS survey data, see Klein and Schoenborn (20), which is available through NCHS at: <http://www.cdc.gov/nchs/data/statnt/statnt20.pdf>. The projected year 2000 U.S. standard resident population is available through the Census Bureau (19) at: <http://www.census.gov/prod/1/pop/p25-1130/p251130.pdf>.

### Treatment of Unknown Values

In the tables, all unknown values (i.e., respondents coded as “refused,” “don’t know,” or “not ascertained”) with respect to each table’s variables of interest were removed from the denominators when calculating row percentages (or rates). In most instances, the overall number of unknowns is quite small and would not have supported disaggregation by the demographic characteristics included in the table. Because these unknowns are not shown separately, users calculating their own percentages based on the frequencies and population counts presented in the tables may obtain slightly different results. To aid understanding of the data, weighted counts (in thousands) and weighted percentages of unknowns (with respect to the variables of interest in each table) are shown in [Tables II and III](#).

Unknowns with respect to the demographic characteristics used in each table are not shown due to small cell counts. However, unknowns for both family income and poverty status typically include a sizable number of persons, regardless of the health outcome shown in the table. Missing data on family income and personal earnings in NHIS have been imputed by NCHS analysts using multiple-imputation methodology. Five ASCII

NOTE: Standard as specified in Shalala DE. HHS policy for changing the population standard for age adjusting death rates. Memorandum from the Secretary, August 26, 1998.

data sets containing imputed values for the survey year and additional information about the imputed income files are available at: <http://www.cdc.gov/nchs/nhis/2011imputedincome.htm>. However, income and poverty estimates in the present report are based on reported income only and may differ from other measures that are based on imputed data (which were not available when this report was prepared). Because it is difficult to interpret the relationship

between “unknown” income (and poverty status) and the health outcomes displayed in the tables, counts of persons in these unknown categories are not shown in the tables. Table IV shows weighted counts (in thousands) and weighted percentages of persons in the U.S. population with unknown values for family income and poverty status, as well as for education and health insurance coverage.

The “Income and Assets” section in the Family Core of the NHIS instrument

allows respondents to report their family income in several ways. Respondents are first asked to provide their family’s total combined income before taxes from all sources for the previous calendar year in a dollar amount (from \$0 up to \$999,995). Any family income responses greater than \$999,995 are entered as \$999,995. From 1997 to 2006, respondents who did not know or refused to state an amount were then asked if their family’s combined income in the previous calendar year was

**Table II. Weighted counts and weighted percentages of persons with unknown information for selected health variables: National Health Interview Survey, 2011**

Variable	Weighted count in thousands	Weighted percent of persons	Reference table
Respondent-assessed health status . . . . .	397	0.13	1, 2, V
Limitation in usual activities . . . . .	365	0.12	3, 4, VI
Limitation in usual activities due to chronic conditions . . . . .	584	0.19	3, 4, VI
Limitation in activities of daily living (ADLs) . . . . .	65	0.03	5, VII
Limitation in instrumental activities of daily living (IADLs) . . . . .	82	0.04	5, VII
Limitation in work activity . . . . .	122	0.06	6, VIII
Special education or early intervention services . . . . .	74	0.10	7, IX
Medical care not received due to cost . . . . .	241	0.08	15, XIV
Medical care delayed due to cost . . . . .	245	0.08	15, XIV
Number of overnight hospital stays . . . . .	82	0.03	16, 17, XV
Health insurance coverage among persons under age 65 . . . . .	2,303	0.87	18, 19, XVI
Health insurance coverage among persons aged 65 and over . . . . .	247	0.62	18, 19, XVI
Any period without health insurance coverage among currently insured persons under age 65 . . . . .	659	0.30	20, 21, XVII
Duration of period without health insurance coverage among currently insured persons under age 65 . . . . .	154	0.07	20, 21, XVII
Length of time since last had health insurance coverage among currently uninsured persons under age 65 . . . . .	2,444	5.39	22, 23, XVIII
Reasons for no health insurance coverage among currently uninsured persons under age 65 . . . . .	2,227	4.91	24, 25, XIX

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

\$20,000 or more, or less than \$20,000. If they again refused to answer or said they did not know, they were not asked any more questions about their family income. Respondents who replied to the “above/below \$20,000” question were then handed a list of detailed income categories (top-coded at \$75,000 or more) and asked to select the interval containing their best estimate of their family’s combined income.

However, starting with survey year 2007, the income follow-up questions were changed. Modifications to the 1997–2006 income follow-up questions were explored because those questions had not appreciably increased the analytic usability of family income data or of the poverty ratio in NHIS. During the second quarter of 2006, in an attempt to decrease the frequency of unknown responses to family income and poverty status variables, a portion of the NHIS sample participated in a field test that evaluated an alternative way to ask respondents about family income. Based on results of the 2006 field test, NHIS family income questions were modified starting with the first quarter of 2007.

In the 2007–2011 NHIS, respondents who did not know or refused to state an income amount were asked if their family’s combined income in the previous calendar year was \$50,000 or more, or less than \$50,000. If they again refused to answer, or said they did not know, they were not asked

any more questions about their family’s income. If the respondent indicated that the family’s income was less than \$50,000, at most two additional follow-up questions were asked: (a) whether the family income was less than (or at least) \$35,000 and (b) if it was less than \$35,000, whether the family income was less than the poverty threshold. The family’s poverty threshold was prefilled by the computer-assisted personal interviewing (CAPI) instrument using information on the family’s size collected earlier in the interview.

If the respondent initially indicated that the family income was \$50,000 or more, at most two additional follow-up questions were asked: (a) whether the family income was less than (or at least) \$100,000 and, (b) if it was less than \$100,000, whether the family income was less than (or at least) \$75,000.

NHIS respondents thus fall into one of four categories with respect to income information: (a) those who supplied a dollar amount (78% of the 2011 sample), (b) those who indicated a range for their income by answering all of the applicable follow-up questions (14% of the sample), (c) those who indicated a less precise range for their family’s income by only answering some of the applicable follow-up questions (3% of the sample), and (d) those who provided no income information (5% of the sample) (unweighted results).

Respondents who stated that their family income was below \$35,000 are included in the “Less than \$35,000” category under “Family income” in the tables in this report, along with respondents who gave an income range that was less than \$35,000. Likewise, respondents who stated that their family income was at or above \$35,000 are included in the “\$35,000 or more” category under “Family income” along with those respondents who gave an income range that was \$35,000 or more. Note that the counts for the detailed (indented) amounts do not sum to the count shown for “\$35,000 or more” for this reason.

A poverty status variable was created for all respondents. Poverty status is the ratio of family income in the previous calendar year to the appropriate 2010 poverty threshold (given the family size and number of children) defined by the U.S. Census Bureau (16). These poverty thresholds were used in creating the poverty ratios for respondents who provided a dollar amount and respondents who specified only an income category in the follow-up questions. For further information, see the “Income and Assets” section of the 2011 *NHIS Survey Description*, available from: [ftp://ftp.cdc.gov/pub/Health\\_Statistics/NCHS/Dataset\\_Documentation/NHIS/2011/srvydesc.pdf](ftp://ftp.cdc.gov/pub/Health_Statistics/NCHS/Dataset_Documentation/NHIS/2011/srvydesc.pdf).

Persons categorized as “Poor” had a ratio less than 1.0; that is, their family

**Table III. Weighted counts and weighted percentages of injury and poisoning episodes with unknown information: National Health Interview Survey, 2011**

Variable	Weighted count in thousands	Weighted percent of episodes	Reference table
Injury and poisoning episodes, by activity at time of episode . . . . .	487	1.28	11, 12, XII
Injury and poisoning episodes, by place of occurrence. . . . .	326	0.85	13, 14, XIII

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

**Table IV. Weighted counts and weighted percentages of persons with unknown information on selected sociodemographic characteristics: National Health Interview Survey, 2011**

Variable	Weighted count in thousands	Weighted percent of persons	Reference table
Family income . . . . .	16,351	5.35	1–25, V–XIX
Poverty status. . . . .	35,375	11.56	1–25, V–XIX
Education (persons aged 25 and over) . . . . .	3,527	1.75	1–6, 8–25, V–VIII, X–XIX
Health insurance coverage for persons under age 65 . . . . .	2,303	0.87	1–6, 8–17, V–XIII, X–XV
Health insurance coverage for persons aged 65 and over. . . . .	247	0.62	1–6, 8–17, V–XIII, X–XV

NOTE: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

incomes were strictly below their family’s poverty threshold. The “Near poor” category includes persons with family incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have family incomes that are 200% of the poverty threshold or above. The remaining groups of respondents—those who did not supply sufficient income information in the follow-up questions to categorize as a three-category poverty status variable, as well as those who refused to provide any income information—are by necessity coded as unknown with respect to poverty status. Family income information is missing for 5% of the U.S. population, and poverty status information is missing for 12% of the U.S. population (weighted results). Five percent of the NHIS sample is missing information on income, and 12% of the sample is missing information on poverty status (unweighted results). See [Appendix Table IV](#) for the weighted results.

NCHS analysts have ascertained that hospitalizations for newborns with a normal birth and for women with a normal delivery have been undercounted. Therefore, the estimates associated with hospitalizations reported here are smaller than would be obtained if all hospitalizations for births and deliveries were counted.

Estimates of injury and poisoning episodes by their cause are derived from the *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD–9–CM) external cause codes (E codes) that describe the cause of the episode. A person may experience multiple injury or poisoning episodes.

Because of changes in the injury and poisoning section, imputation of unknown dates of injury and poisoning episodes, and the use of a 5-week reference period rather than a 3-month recall period to calculate the annualized estimates used in this report, estimates for 2004 and subsequent years are not comparable with estimates from prior years. For further details about changes to the injury or poisoning questions and analytic methods, effective with 2004, see both the “Methods” section and [Appendix I](#) of the 2004 Summary Health Statistics report for the U.S. population (13).

Frequencies presented in [Tables 8, 9, 11, and 13](#) were annualized by multiplying the counts for the 5-week reference period by 10.4 to produce annualized frequencies. Rates presented in [Tables 8, 10, 12, 14, and XI–XIII](#) were calculated using the annualized frequencies.

## Hypothesis Tests

Two-tailed tests of significance were performed on all the comparisons mentioned in the “Selected Highlights” section of this report (no adjustments were made for multiple comparisons). The test statistic used to determine the statistical significance of the difference between two percentages was:

$$Z = \frac{|X_a - X_b|}{\sqrt{S_a^2 + S_b^2}},$$

where  $X_a$  and  $X_b$  are the two percentages being compared, and  $S_a$  and  $S_b$  are the SUDAAN-calculated standard errors of those percentages. The critical value used for two-sided tests at the 0.05 level was 1.96.

## Appendix II. Definitions of Selected Terms

### Sociodemographic Terms

**Age**—The age recorded for each person is the age at the last birthday. Age is recorded in single years and grouped using a variety of age categories, depending on the purpose of the table.

**Education**—Categories of education are based on years of school completed or highest degree obtained for persons aged 25 and over. Only years completed in a school that advances a person toward an elementary or high school diploma, General Educational Development high school equivalency diploma (GED), or college, university, or professional degree are included. Education in other schools, or home schooling, is counted only if the credits are accepted in a regular school system.

**Family income**—Each member of a family is classified according to the total income of all family members. Family members are all persons within the household related to each other by blood, marriage, cohabitation, or adoption. The income recorded is the total income received by all family members in the previous calendar year. Income from all sources includes wages, salaries, military pay (when an Armed Forces member lives in the family), pensions, government payments, child support or alimony, dividends, and help from relatives. Unrelated individuals living in the same household (e.g., roommates) are considered to be separate families and are classified according to their own incomes.

**Health insurance coverage**—Respondents were asked about their health insurance coverage at the time of interview. They reported whether they were covered by private insurance (obtained through an employer or workplace, purchased directly, or obtained through a local or community program), Medicare, Medigap (supplemental Medicare coverage), Medicaid, Children's Health Insurance

Program (CHIP), Indian Health Service (IHS), military coverage (including VA, TRICARE, or CHAMP-VA), a state-sponsored health plan, another government program, or any single-service plans. This information was used to form two health insurance hierarchies: one for those under age 65 and another for those aged 65 and over.

For persons under age 65, a health insurance hierarchy of four mutually exclusive categories was developed (22,23). Persons with more than one type of health insurance were assigned to the first appropriate category in the following hierarchy:

*Private coverage*—Includes persons who had any comprehensive private insurance plan (including health maintenance organizations and preferred provider organizations). These plans include those obtained through an employer, purchased directly, or obtained through local or community programs.

*Medicaid*—Includes persons who do not have private coverage but who have Medicaid or other state-sponsored health plans, including CHIP.

*Other coverage*—Includes persons who do not have private coverage or Medicaid (or other public coverage) but who have any type of military health plan (includes VA, TRICARE, and CHAMP-VA) or Medicare. This category also includes persons who are covered by other government programs.

*Uninsured*—Includes persons who did not indicate that they were covered at the time of interview under private health insurance (from employer or workplace, purchased directly, or obtained through a state, local government, or community program), Medicare, Medicaid, CHIP, a state-sponsored health plan, other government programs, or military health plan (includes VA, TRICARE, and CHAMP-VA). This category also includes persons

covered by IHS only or those who only have a plan that pays for one type of service such as accidents or dental care.

For persons aged 65 and over, a health insurance hierarchy of five mutually exclusive categories was developed (24). Persons with more than one type of health insurance were assigned to the first appropriate category in the following hierarchy:

*Private coverage*—Includes older persons who have both Medicare and any comprehensive private health insurance plan (including health maintenance organizations and preferred provider organizations). These plans include those obtained through a current or former employer, purchased directly, or obtained through local or community programs. This category also includes persons with private insurance only.

*Medicare and Medicaid*—Includes older persons who do not have any private coverage but who have both Medicare and Medicaid or other state-sponsored health plans, including CHIP.

*Medicare only*—Includes older persons who have only Medicare coverage.

*Other coverage*—Includes older persons who have not been previously classified as having private, Medicare and Medicaid, or Medicare-only coverage. It includes older persons who have only Medicaid, other state-sponsored health plans, or CHIP, as well as persons who have any type of military health plan (VA, TRICARE, and CHAMP-VA) with or without Medicare.

*Uninsured*—Includes persons who did not indicate that they were covered at the time of interview under private health insurance (from employer or workplace, purchased directly, or obtained through a state, local government, or community

program), Medicare, Medicaid, CHIP, a state-sponsored health plan, other government programs, or military health plan (VA, TRICARE, and CHAMP-VA). This category also includes persons who are covered by IHS only or who only have a plan that pays for one type of service, such as accidents or dental care.

For approximately 1% of respondents, coverage status (i.e., whether they are insured or uninsured) is unknown. Weighted frequencies indicate that approximately 0.87% of the population under age 65 and approximately 0.62% of the population aged 65 and over fall into this “Unknown” category.

*Hispanic or Latino origin and race*—These are two separate and distinct concepts. Persons of Hispanic or Latino origin may be of any race. Hispanic or Latino origin includes persons of Mexican, Puerto Rican, Cuban, Central and South American, or Spanish origin. All tables show Mexican or Mexican-American persons as a subset of Hispanic or Latino. Other groups are not shown for reasons of confidentiality or statistical reliability.

In the 1997 and 1998 Summary Health Statistics reports (25–30), Hispanic ethnicity was shown as part of race/ethnicity, which also included categories for “Non-Hispanic white,” “Non-Hispanic black,” and “Non-Hispanic other” (some tables showed Mexican-American persons as a subset of Hispanic persons). Beginning in 1999, the categories for race were expanded to be consistent with the 1997 Office of Management and Budget (OMB) federal guidelines (12), and a distinction is now made between the characteristics of race and of Hispanic or Latino origin and race. Hispanic or Latino origin and race is divided into “Hispanic or Latino” and “Not Hispanic or Latino.” “Hispanic or Latino” includes the subset “Mexican or Mexican American.” “Not Hispanic or Latino” is further divided into “White, single race” and “Black or African American, single race.” Persons in these categories indicated only a single race group (see the definition of race in this

appendix for more information). Data are not shown for other “Not Hispanic or Latino, single race” persons or for multiple-race persons due to statistical unreliability as measured by the relative standard errors of the estimates (but are included in the total for “Not Hispanic or Latino”).

The text in this report uses shorter versions of the current (1997) OMB race and Hispanic or Latino origin terms, for conciseness, whereas the tables use the complete terms. For example, the category “Not Hispanic or Latino, black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

*Place of residence*—Classified in this report in three categories: “Large MSA” (metropolitan statistical area) of 1 million or more persons, “Small MSA” of fewer than 1 million persons, and “Not in an MSA.” Generally, an MSA consists of a county or group of counties containing at least one urbanized area of 50,000 or more population. In addition to the county or counties that contain all or part of the urbanized area, an MSA may contain adjacent counties that are economically and socially integrated with the central city. The number of adjacent counties included in an MSA is not limited, and boundaries may cross state lines.

OMB defines MSAs according to published standards that are applied to U.S. Census Bureau data. The definition of an MSA is reviewed periodically. For 1995–2005 NHIS data, the MSA definitions were based on the June 1993 MSA definitions that resulted from application of the 1990 OMB standards to the 1990 census. Beginning in 2006, the June 2003 metropolitan and micropolitan statistical area definitions, which resulted from application of the 2000 OMB standards to the 2000 census, are used for NCHS data. The 2000 criteria for designating MSAs differ from the 1990 criteria in substantial ways, including simplification of the MSA classification criteria and addition of a new category—Micropolitan statistical area—for some nonmetropolitan counties. These changes may lessen the comparability of estimates by place of

residence in 2006–2011 with estimates from earlier years. Those who compare NHIS frequencies across this transition in OMB standards need to recognize that some of the differences may be due to changes in definitions of metropolitan areas. In the tables for this report, place of residence is based on variables in the 2011 in-house Household data file indicating MSA status and MSA size. These variables are collapsed into three categories based on the U.S. Census 2000 population: MSAs with a population size of 1 million or more, MSAs with a population size of fewer than 1 million, and areas that are not within an MSA. Areas not in an MSA include both micropolitan areas and areas outside the core-based statistical areas. For additional information about MSAs, visit the Census Bureau website at: <http://www.census.gov/population/metro/>.

*Poverty status*—Based on family income and family size, using the U.S. Census Bureau’s poverty thresholds. “Poor” persons are defined as those whose family incomes are below the poverty threshold. “Near poor” persons have family incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have family incomes that are 200% of the poverty threshold or above. See [Appendix I](#) for information on the measurement of family income and poverty status.

*Race*—In the 1997 and 1998 Summary Health Statistics reports (25–30), race/ethnicity consisted of four categories: “Non-Hispanic white,” “Non-Hispanic black,” “Non-Hispanic other,” and “Hispanic” (some tables showed Mexican-American persons as a subset of Hispanic persons). Beginning in 1999, the categories for race were expanded to be consistent with the 1997 OMB federal guidelines (12), which now distinguish persons of one race from persons of two or more races. The category “One race” refers to persons who indicated only a single race group, and it includes subcategories for “White,” “Black or African American,” “American Indian or Alaska Native,” “Asian,” and “Native Hawaiian or Other Pacific Islander.” The category

“Two or more races” refers to persons who indicated more than one race group. Data for multiple-race combinations can only be reported to the extent that the estimates meet the requirements for confidentiality and statistical reliability. In this report, three categories are shown for multiple-race individuals—a summary category and two multiple-race categories: “Black or African American and white,” and “American Indian or Alaska Native and white.” Other combinations are not shown separately due to statistical unreliability as measured by the relative standard errors of the estimates (but they are included in the total for “Two or more races”).

Prior to 2003, “other race” was a separate race response on NHIS, although it was not shown separately in the tables of the Summary Health Statistics reports. Beginning with the 2003 NHIS, however, editing procedures were changed to maintain consistency with the U.S. Census Bureau procedures for collecting and editing data on race and ethnicity. As a result, in cases where “other race” is mentioned along with one or more OMB race groups, the “other race” response is dropped, and the OMB race group information is retained on the NHIS data file. In cases where “other race” is the only race response, it is treated as missing and the race is imputed. Although this change has resulted in an increase in the number of persons in the OMB race category “White” because this is numerically the largest group, the change is not expected to substantially affect the estimates in this report. More information about the race/ethnicity editing procedures used by the Census Bureau can be found at: <http://www.census.gov/popest/data/historical/files/MRSF-01-US1.pdf>.

The text in this report uses shorter versions of the current (1997) OMB race terms for conciseness, and the tables use the complete terms. For example, the category “Black or African American, single race” in the tables is referred to as “black” in the text.

**Region**—In the geographic classification of the U.S. population, states are grouped into the four regions

used by the U.S. Census Bureau, as follows:

<i>Region</i>	<i>States included</i>
Northeast	Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania;
Midwest	Ohio, Illinois, Indiana, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Kansas, and Nebraska;
South	Delaware, Maryland, District of Columbia, West Virginia, Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Oklahoma, Arkansas, and Texas;
West	Washington, Oregon, California, Nevada, New Mexico, Arizona, Idaho, Utah, Colorado, Montana, Wyoming, Alaska, and Hawaii.

## Terms Related to Health Characteristics or Outcomes

**Activities of daily living (ADLs)** — See “Limitation in Activities of Daily Living (ADLs).”

**Chronic condition**—A condition is considered chronic if (a) its onset was more than 3 months before the date of interview or (b) it is a type of condition that ordinarily lasts more than 3 months. Examples of conditions considered chronic regardless of onset are diabetes, emphysema, and arthritis.

**Early intervention services**— Services designed to meet the needs of very young children with special needs or disabilities. The services may include, but are not limited to, medical and social services, parental counseling, and therapy. Services may be provided at the child’s home, a medical center, a day care center, or other location. They are

provided by the state or school system at no cost to the parent.

**Health status**—See “Respondent-assessed health status.”

**Injury and poisoning episodes**— Injury episode refers to a traumatic event in which the person experienced one or more injuries due to an external cause (e.g., a fall down a flight of stairs or a motor vehicle traffic accident). Poisoning episode refers to the ingestion of or contact with a harmful substance, as well as overdoses or misuse of any drug or medication. Medically consulted injury or poisoning episode refers to an injury or poisoning episode for which a health care professional was contacted either in person or by telephone for advice or treatment. Calls to a poison control center are also considered to be a contact with a health care professional.

**Instrumental activities of daily living (IADLs)** —See “Limitation in instrumental activities of daily living (IADLs).”

**Limitation in activities of daily living (ADLs)** —ADLs include such activities as bathing, eating, dressing, getting into or out of a bed or chair, using the toilet, or getting around inside the home. Persons were classified as limited in ADLs if they required the help of other persons with any of these activities due to a physical, mental, or emotional problem. Data in this report are shown only for persons aged 18 and over, although the questions were asked of or about persons aged 3 and over. Persons with a limitation in ADLs (Table 5) are a subset of persons who were limited in usual activity (Tables 3 and 4).

**Limitation in instrumental activities of daily living (IADLs)** —IADLs include everyday household chores, doing necessary business, or shopping. Persons aged 18 and over were classified as limited in IADLs if they required the help of other persons with any of these activities due to a physical, mental, or emotional problem. Persons with a limitation in IADLs (Table 5) are a subset of persons who were limited in usual activity (Tables 3 and 4).

*Limitation in usual activities*—An overall measure of limitation that includes limitations of any type and for any reason.

*Not limited*—Describes persons who were not limited in their usual age-appropriate work, school, or play activities, ADLs, IADLs, or in any other way, due to a physical, mental, or emotional problem.

*Limited*—Describes persons who were limited in some way—including in their age-appropriate work, school, or play activities, ADLs, or IADLs—due to a physical, mental, or emotional problem.

*Limited due to one or more chronic conditions*—Describes persons whose limitation was due to at least one condition that is considered chronic; this category is a subset of the “Limited” category.

*Limitation in work activity*—Based on a series of questions about the ability of adults aged 18–69 to engage in work activity, regardless of whether they currently held a job. Persons with a limitation in work activity (Table 6) are a subset of persons who were limited in usual activity (Tables 3 and 4).

*Unable to work*—Describes adults who were not able to work at a job or business due to a physical, mental, or emotional problem.

*Limited in work*—Describes adults who were able to work but were limited in the kind or amount of work they could do due to a physical, mental, or emotional problem.

*Not limited in work*—Describes adults who did not report any limitation in their ability to work at a job or business.

*Overnight hospital stay*—A measure of the number of times a person was hospitalized in the previous 12 months. Visits to a hospital emergency room that did not result in admission to the hospital are not included. Overnight hospital stays for the birth of a child are counted for both the mother and the child.

*Period without health insurance coverage*—May be of any duration and for any reason. Information on the number of months without coverage was collected for persons who had health insurance coverage at the time of interview. Number of months without coverage was collapsed into two categories for presentation in this report.

*Reasons for no health insurance coverage*—Persons without health insurance coverage at the time of interview were asked the reasons for not having coverage. A maximum of five reasons could be reported. Persons who reported more than one reason within a category were counted only once for that category. Unknown reasons were included in the “Other” category.

*Respondent-assessed health status*—Based on the question, “Would you say your health, in general, was excellent, very good, good, fair, or poor?” Information was obtained from all respondents, with proxy responses allowed for adults not taking part in the interview and for all children aged 17 and under.

*Special education*—Teaching designed to meet the needs of a child with special needs or disabilities. Special education is paid for by the public school system and may take place at a regular school, at a special school, at a private school, at home, or at a hospital. It is designed for children aged 3–21 years, although data collected in NHIS are limited to children aged 17 and under.

*Time since last had health insurance coverage*—Asked of persons who were not insured at the time of interview. Responses were reported in single months and categorized for presentation in this report. “One month” includes durations of 1 month or less (but more than zero).

## Appendix III. Tables of Unadjusted (Crude) Estimates (Tables V–XIX)

**Table V. Crude percent distribution of respondent-assessed health status, by selected characteristics: United States, 2011**

Selected characteristic	Total	Respondent-assessed health status <sup>1</sup>				
		Excellent	Very good	Good	Fair	Poor
		Percent distribution <sup>2</sup> (standard error)				
Total <sup>3</sup> (crude) . . . . .	100.0	35.3 (0.29)	30.3 (0.25)	24.1 (0.23)	8.0 (0.13)	2.4 (0.07)
Total <sup>3</sup> (age-adjusted) . . . . .	100.0	36.2 (0.28)	30.3 (0.25)	23.7 (0.23)	7.6 (0.12)	2.3 (0.06)
Sex						
Male . . . . .	100.0	36.4 (0.32)	30.1 (0.28)	23.8 (0.27)	7.4 (0.15)	2.2 (0.08)
Female . . . . .	100.0	34.1 (0.32)	30.4 (0.28)	24.4 (0.26)	8.5 (0.16)	2.6 (0.08)
Age						
Under 12 years . . . . .	100.0	57.3 (0.58)	26.2 (0.50)	14.7 (0.42)	1.5 (0.11)	0.3 (0.05)
12–17 years . . . . .	100.0	53.9 (0.74)	27.2 (0.65)	16.5 (0.52)	2.0 (0.17)	0.4 (0.07)
18–44 years . . . . .	100.0	37.4 (0.38)	32.9 (0.35)	23.2 (0.32)	5.4 (0.15)	1.0 (0.06)
45–64 years . . . . .	100.0	23.2 (0.39)	31.8 (0.40)	28.6 (0.37)	12.2 (0.26)	4.2 (0.15)
65–74 years . . . . .	100.0	16.9 (0.57)	28.4 (0.67)	33.2 (0.68)	16.2 (0.53)	5.3 (0.30)
75 years and over . . . . .	100.0	11.7 (0.53)	25.3 (0.72)	34.4 (0.80)	20.5 (0.68)	8.1 (0.46)
Race						
One race <sup>4</sup> . . . . .	100.0	35.2 (0.29)	30.3 (0.25)	24.1 (0.23)	8.0 (0.13)	2.4 (0.07)
White . . . . .	100.0	35.8 (0.33)	30.9 (0.28)	23.4 (0.25)	7.6 (0.15)	2.3 (0.08)
Black or African American . . . . .	100.0	31.6 (0.67)	26.6 (0.56)	27.7 (0.64)	11.0 (0.34)	3.0 (0.16)
American Indian or Alaska Native . . . . .	100.0	28.0 (2.86)	28.1 (3.03)	30.4 (2.40)	10.2 (1.10)	3.4 (0.79)
Asian . . . . .	100.0	35.8 (1.02)	30.7 (0.91)	25.4 (0.85)	6.4 (0.40)	1.7 (0.20)
Native Hawaiian or Other Pacific Islander . . . . .	100.0	30.1 (4.98)	26.4 (5.02)	30.8 (5.06)	12.0 (3.03)	†
Two or more races <sup>5</sup> . . . . .	100.0	39.1 (1.52)	28.9 (1.31)	22.8 (1.27)	6.6 (0.60)	2.6 (0.36)
Black or African American, white . . . . .	100.0	40.1 (2.55)	35.9 (2.61)	19.4 (1.97)	4.4 (0.75)	†
American Indian or Alaska Native, white . . . . .	100.0	30.6 (2.80)	24.2 (2.22)	27.6 (2.22)	11.8 (1.57)	5.8 (1.02)
Hispanic or Latino origin <sup>6</sup> and race						
Hispanic or Latino . . . . .	100.0	35.1 (0.60)	26.9 (0.50)	28.1 (0.51)	8.2 (0.27)	1.8 (0.10)
Mexican or Mexican American . . . . .	100.0	33.8 (0.78)	27.1 (0.65)	29.4 (0.66)	7.9 (0.34)	1.8 (0.12)
Not Hispanic or Latino . . . . .	100.0	35.3 (0.32)	31.0 (0.27)	23.3 (0.25)	7.9 (0.14)	2.5 (0.08)

Hispanic or Latino origin <sup>6</sup> , race, and poverty status						
Hispanic or Latino:						
Poor . . . . .	100.0	30.4 (1.12)	24.4 (1.00)	31.4 (1.08)	11.1 (0.58)	2.8 (0.25)
Near poor . . . . .	100.0	33.8 (1.17)	27.1 (1.05)	29.3 (0.99)	8.0 (0.45)	1.7 (0.22)
Not poor . . . . .	100.0	41.2 (0.92)	29.2 (0.77)	22.7 (0.66)	6.1 (0.40)	0.8 (0.11)
Not Hispanic or Latino:						
White, single race:						
Poor . . . . .	100.0	27.9 (1.03)	25.8 (1.03)	25.6 (0.92)	14.4 (0.62)	6.3 (0.50)
Near poor . . . . .	100.0	29.4 (0.92)	27.5 (0.77)	26.7 (0.72)	11.9 (0.47)	4.6 (0.28)
Not poor . . . . .	100.0	39.2 (0.43)	34.0 (0.38)	20.2 (0.31)	5.2 (0.15)	1.4 (0.07)
Black or African American, single race:						
Poor . . . . .	100.0	27.1 (1.21)	24.5 (1.21)	27.8 (1.22)	15.4 (0.80)	5.3 (0.41)
Near poor . . . . .	100.0	31.4 (1.47)	22.4 (1.25)	28.7 (1.34)	14.1 (0.83)	3.4 (0.36)
Not poor . . . . .	100.0	34.3 (1.00)	30.7 (0.86)	26.2 (0.87)	7.3 (0.41)	1.4 (0.16)

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% but less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>Based on the question, "Would you say [person's] health in general is excellent, very good, good, fair, or poor?"

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 2.

<sup>1</sup>Based on a series of questions concerning: limitation(s) in a person's ability to engage in work, school, play, or other activities for health reasons; the specific conditions causing the limitation(s); and the duration of these condition(s). Conditions lasting more than 3 months are classified as chronic; selected conditions (e.g., arthritis, diabetes, cancer, and heart conditions) are considered chronic regardless of duration.

<sup>2</sup>A subset of the category "Limited."

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

<sup>4</sup>Percentages may not add to totals due to rounding.

<sup>5</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>6</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>7</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>8</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>9</sup>Shown only for persons aged 25 and over.

<sup>10</sup>GED is General Educational Development high school equivalency diploma.

<sup>11</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>13</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>14</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 4.

**Table VII. Crude percentages of persons aged 18 and over having limitation in activities of daily living and instrumental activities of daily living, by selected characteristics: United States, 2011—Con.**

Selected characteristic	Limitation in ADLs <sup>1</sup> and IADLs <sup>2</sup>	
	ADLs	IADLs
Region		
Northeast . . . . .	2.4 (0.24)	4.1 (0.29)
Midwest . . . . .	2.0 (0.13)	4.1 (0.21)
South . . . . .	2.2 (0.10)	4.4 (0.16)
West . . . . .	2.4 (0.16)	4.2 (0.22)
Hispanic or Latino origin <sup>7</sup> , race, and sex		
Hispanic or Latino, male . . . . .	1.2 (0.15)	1.9 (0.20)
Hispanic or Latina, female . . . . .	1.8 (0.17)	3.5 (0.24)
Not Hispanic or Latino:		
White, single race, male . . . . .	1.9 (0.11)	3.1 (0.13)
White, single race, female . . . . .	2.7 (0.12)	5.6 (0.18)
Black or African American, single race, male . . . . .	2.4 (0.27)	4.1 (0.33)
Black or African American, single race, female . . . . .	3.4 (0.24)	6.4 (0.34)
Hispanic or Latino origin <sup>7</sup> , race, and poverty status		
Hispanic or Latino:		
Poor . . . . .	2.2 (0.30)	4.1 (0.41)
Near poor . . . . .	1.5 (0.21)	2.8 (0.32)
Not poor . . . . .	0.8 (0.13)	1.5 (0.18)
Not Hispanic or Latino:		
White, single race:		
Poor . . . . .	4.9 (0.53)	9.6 (0.67)
Near poor . . . . .	4.0 (0.30)	8.1 (0.42)
Not poor . . . . .	1.4 (0.08)	2.7 (0.11)
Black or African American, single race:		
Poor . . . . .	4.6 (0.52)	8.9 (0.69)
Near poor . . . . .	3.7 (0.48)	7.3 (0.66)
Not poor . . . . .	1.6 (0.18)	2.7 (0.24)

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% but less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>ADLs are activities of daily living. Limitation in ADLs is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons with PERSONAL CARE NEEDS, such as eating, bathing, dressing, or getting around inside the home?"

<sup>2</sup>IADLs are instrumental activities of daily living. Limitation in IADLs is based on the question, "Because of a physical, mental, or emotional problem, does [person] need the help of other persons in handling ROUTINE NEEDS, such as everyday household chores, doing necessary business, shopping, or getting around for other purposes?"

<sup>3</sup>Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I).

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 5.

SOURCE: CDC/NCHS, National Health Interview Survey, 2011.

**Table VIII. Crude percent distribution of limitation in work activity due to health problems among persons aged 18–69, by selected characteristics: United States, 2011**

Selected characteristic	Total	Limitation in work activity <sup>1</sup>		
		Unable to work	Limited in work	Not limited in work
		Percent distribution <sup>2</sup> (standard error)		
Total <sup>3</sup> (crude)	100.0	6.8 (0.15)	3.3 (0.09)	89.9 (0.18)
Total <sup>3</sup> (age-adjusted)	100.0	6.3 (0.13)	3.1 (0.08)	90.5 (0.17)

\* Estimates preceded by an asterisk have a relative standard error greater than 30% but less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the questions, "Does a physical, mental, or emotional problem NOW keep [family members 18 years of age or older] from working at a job or business?" and for persons not kept from working, "Are [family members 18 years of age and older] limited in the kind or amount of work they can do because of a physical, mental, or emotional problem?"

<sup>2</sup>Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I).

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 6.

Poor . . . . .	9.4 (1.03)
Near poor . . . . .	7.2 (1.05)
Not poor . . . . .	5.3 (0.76)

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the question, "Do any of the following [family members under 18 years of age] receive Special Education or Early Intervention Services?"

<sup>2</sup>Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I).

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>9</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>10</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 7.

Poor . . . . .	382.92 (48.98)

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the questions, "Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?" and "Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?" Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.

<sup>3</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>4</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>5</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>6</sup>Shown only for persons aged 25 and over.

<sup>7</sup>GED is General Educational Development high school equivalency diploma.

<sup>8</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>9</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted rates, refer to Table 8.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the questions, “Of the [number] times that [person] was injured, how many of those times was the injury serious enough that a medical professional was consulted?” and “Of the [number] times that [person] was poisoned, how many of those times was the poisoning serious enough that a medical professional was consulted?” Injury and poisoning episodes are classified according to the external cause of the episode using categories based on ICD–9–CM external cause codes (E codes). The category “Transportation” includes motor vehicle, bicycle, motorcycle, pedestrian, train, boat, and airplane. The category “Other” includes fire/burn/scald-related, animal or insect bite, machinery, and other (not specified). The category “Poisoning” excludes food poisoning and allergic reaction. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Includes unknown causes.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “One race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “One race” but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “One race, Black or African American” in the tables is referred to as “black persons” in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories “Less than \$35,000” and “\$35,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category “Private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, “Private” includes persons with only private coverage or private in combination with Medicare coverage. The category “Uninsured” includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted rates, refer to Table 10.

West . . . . .	*6.58 (2.14)	15.66 (3.10)	24.38 (3.31)	*3.09 (1.19)	23.81 (3.90)	23.77 (3.36)	39.05 (4.31)		

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

– Quantity zero.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

<sup>1</sup>Based on the question, "What activity was [person] involved in at the time of the injury/poisoning?" Respondents could indicate up to two activities. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Includes both drivers and passengers.

<sup>3</sup>Includes unpaid work such as housework, shopping, volunteer work, sleeping, resting, eating, drinking, cooking, hands-on care from another person, and other unspecified activities.

<sup>4</sup>Unknowns were excluded from the denominator when calculating rates.

<sup>5</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>6</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>7</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>8</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>9</sup>Shown only for persons aged 25 and over.

<sup>10</sup>GED is General Educational Development high school equivalency diploma.

<sup>11</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>13</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>14</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted rates, refer to Table 12.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

– Quantity zero.

<sup>1</sup>Based on the question, "Where was [person] when the injury/poisoning happened?" Respondents could indicate up to two places. Rates of episodes have been annualized in this table (see Appendix I). Beginning in 2004, annualized frequencies and rates are based only on episodes that occurred less than or equal to 5 weeks before the date the injury/poisoning questions were asked (see Appendix I). Some date information was imputed so that it would be possible to calculate a specific elapsed time in days between the date of the injury/poisoning episode and the date the injury/poisoning questions were asked for all episodes. Estimates for 2004 and beyond should not be compared with estimates from prior years.

<sup>2</sup>Unknowns were excluded from the denominator when calculating rates.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted rates, refer to Table 14.

SOURCE: CDC/NCHS, National Health Interview Survey, 2011.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>Based on the question, "DURING THE PAST 12 MONTHS, was there any time when [person] needed medical care, but did not get it because [person] couldn't afford it?" (Excludes dental care.)

<sup>2</sup>Based on the question, "DURING THE PAST 12 MONTHS, has [person] delayed seeking medical care because of worry about the cost?" (Excludes dental care.)

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance characteristics, and current health status.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group.

Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 15.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the questions: "During the past 12 months was [person] a patient in a hospital overnight?" and "How many different times did [person] stay in any hospital overnight or longer during the past 12 months?" Hospital stays due to childbirth are included, but overnight stays in an emergency room are excluded. NCHS analysts have determined that hospitalizations for newborns with a normal birth, and for women with a normal delivery, have been undercounted (see Appendix I).

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and health insurance characteristics.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 17.

SOURCE: CDC/NCHS, National Health Interview Survey, 2011.

. . . Category not applicable.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question, "What kind of health insurance or health care coverage does [person] have? INCLUDE those that pay for only one type of service (nursing home care, accidents, or dental care), exclude private plans that only provide extra cash while hospitalized." Based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 and those aged 65 and over were classified separately due to the predominance of Medicare coverage in the older population. The category "Private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons aged 65 and over, "Private" includes persons with only private coverage or private in combination with Medicare coverage. The category "Uninsured" includes persons who had no coverage, as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, poverty status, and current health status.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "Less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 19.

SOURCE: CDC/NCHS, National Health Interview Survey, 2011.

**Table XVII. \* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question (asked of persons who currently had health insurance), "In the PAST 12 MONTHS, was there any time when [person] did NOT have ANY health insurance or coverage?"

<sup>2</sup>Based on the question (asked of persons who currently had health insurance), "In the PAST 12 MONTHS, about how many months was [person] without coverage?"

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>4</sup>Persons having any period without health insurance coverage includes persons with unknown duration of period without coverage.

<sup>5</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>6</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>7</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>8</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>9</sup>Shown only for persons aged 25 and over.

<sup>10</sup>GED is General Educational Development high school equivalency diploma.

<sup>11</sup>The categories "less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>12</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>13</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 21.

Not poor . . . . .	100.0	18.6 (2.01)	14.9 (1.93)	24.2 (2.39)	31.2 (2.47)	11.1 (1.76)

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

<sup>1</sup>Based on the question (asked of persons currently without health insurance coverage), "Not including Single Service Plans, about how long has it been since [person] last had health care coverage?"

<sup>2</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

<sup>3</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>4</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>5</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>6</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>7</sup>Shown only for persons aged 25 and over.

<sup>8</sup>GED is General Educational Development high school equivalency diploma.

<sup>9</sup>The categories "less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>10</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 23.

Not in MSA . . . . .	30.0 (1.56)	2.7 (0.38)	9.9 (0.79)	11.1 (0.85)	40.4 (1.77)	13.9 (1.15)	4.5 (0.64)

See footnotes at end of table.

**Table XIX. Crude percentage of currently uninsured persons under age 65, by selected reasons for no health insurance coverage and by selected characteristics: United States, 2011—Con.**

Selected characteristic	Selected reasons for no health insurance coverage <sup>1</sup>						
	Lost job or change in employment	Change in marital status or death of parent	Ineligible due to age or left school	Employer didn't offer or insurance company refused	Cost	Medicaid stopped	Other <sup>2</sup>
Region	Percent <sup>3</sup> (standard error)						
Northeast . . . . .	24.2 (1.64)	1.8 (0.39)	9.0 (1.00)	11.4 (1.09)	47.5 (1.89)	8.9 (0.89)	8.1 (1.42)
Midwest . . . . .	33.5 (1.52)	3.3 (0.42)	10.4 (0.74)	12.8 (0.90)	35.7 (1.50)	11.6 (1.13)	5.6 (0.78)
South . . . . .	27.2 (0.84)	2.8 (0.28)	9.0 (0.47)	10.9 (0.59)	44.6 (1.09)	12.2 (0.60)	6.2 (0.48)
West . . . . .	25.7 (1.01)	2.4 (0.29)	9.1 (0.59)	13.2 (0.72)	48.3 (1.26)	12.1 (0.69)	6.2 (0.55)

\* Estimates preceded by an asterisk have a relative standard error greater than 30% and less than or equal to 50% and should be used with caution as they do not meet standards of reliability or precision.

† Estimates with a relative standard error greater than 50% are indicated with a dagger and are not shown.

– Quantity zero.

<sup>1</sup>Based on the question, "Which of these are reasons [person] stopped being covered or does not have health insurance?" Persons may report more than one reason. In columns that include more than one reason, persons are counted only once.

<sup>2</sup>"Other" includes moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons.

<sup>3</sup>Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I).

<sup>4</sup>Includes other races not shown separately and persons with unknown education, family income, and poverty status.

<sup>5</sup>In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "One race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "One race" but are not shown separately due to small sample sizes. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the current (1997) Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "One race, Black or African American" in the tables is referred to as "black persons" in the text.

<sup>6</sup>Refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations.

<sup>7</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

<sup>8</sup>Shown only for persons aged 25 and over.

<sup>9</sup>GED is General Educational Development high school equivalency diploma.

<sup>10</sup>The categories "less than \$35,000" and "\$35,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts. Because of the different income questions used in 2007 and beyond, income estimates may not be comparable with those from earlier years.

<sup>11</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater. Because of the different income questions used in 2007 and beyond, poverty ratio estimates may not be comparable with those from earlier years.

<sup>12</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Estimates are based on household interviews of a sample of the civilian noninstitutionalized population. For age-adjusted percentages, refer to Table 25.
