

THE NHSN TARGETED ASSESSMENT FOR ANTIMICROBIAL STEWARDSHIP (TAS)

NHSN AUR Team
September 2022

What is the TAS framework?

- Quality improvement tool developed by CDC using NHSN AU Option.
 - Adapted from CDC's Targeted Assessment for Prevention (TAP) Strategy
- Available to all hospitals participating in the NHSN AU Option.
- Used by antimicrobial stewards at individual facilities and group function (health departments and health systems).

Why was the TAS framework developed?

- AU Users have been asking us for NHSN analytic support in helping meet their facility-identified SAAR targets
 - “We came up with a SAAR goal of 0.9, how many days of therapy do we need to eliminate to get there?”
- AU users can input a prevention target (for example, SAAR = 0.9) and the application will tell them how many DOTs need to be reduced to meet their target.

The TAS framework consists of three components:

- 1. Target:** Run TAS Reports in NHSN to identify facilities, location groups and locations for further assessment using the ranked **AU cumulative attributable difference (AU-CAD)**.
- 2. Assess:** Utilize assessment tools to identify gaps and opportunities to improve antibiotic use.
- 3. Steward:** Implement antibiotic stewardship activities to address gaps and opportunities.

What is the AU-cumulative attributable difference (AU-CAD)?

- The AU-CAD value translates the SAAR target into a tangible number of antimicrobial days to reduce or add to achieve a SAAR target.

AU-CAD = Observed antimicrobial days - (Predicted antimicrobial days x SAAR target)

AU-cumulative attributable difference (AU-CAD)

$$\text{AU-CAD} = \text{Observed antimicrobial days} - (\text{Predicted antimicrobial days} \times \text{SAAR target})$$

Observed antimicrobials days: Antimicrobial days reported by a facility for a SAAR antimicrobial agent category in a specified patient care location, group of locations, or group of facilities.

AU-cumulative attributable difference (AU-CAD)

$$\text{AU-CAD} = \text{Observed antimicrobial days} - (\text{Predicted antimicrobial days} \times \text{SAAR target})$$

Predicted antimicrobials days: Antimicrobial days predicted for that same antimicrobial agent category calculated using risk-adjusted SAAR predictive models.

AU-cumulative attributable difference (AU-CAD)

AU-CAD = Observed antimicrobial days - (Predicted antimicrobial days x **SAAR target**)

SAAR target: SAAR target chosen by AU users for each antimicrobial agent category

How do I interpret the AU-CAD value?

- Like the SAAR, the AU-CAD is not a measure of the appropriateness
 - Stewards will need to evaluate the appropriateness of AU for select antibiotics or infections to inform the clinical relevance of AU-CAD reductions or additions.
- A **positive** AU-CAD value represents the number of antimicrobial days that should be **reduced** to **decrease** the SAAR value and reach the SAAR target.
- A **negative** AU-CAD value represents the number of antimicrobial days to **add** to **increase** the SAAR value and reach the SAAR target.

An example in interpreting the AU-CAD value

$$\text{AU-CAD} = \text{Observed antimicrobial days} - (\text{Predicted antimicrobial days} \times 0.95)$$

- If a facility has an AU-CAD of 75 when they run a TAS report with a SAAR target of 0.95, the interpretation would be “The facility would have needed 75 fewer antimicrobial days to reach their SAAR target of 0.95 during this time period.”

How do I select a SAAR target?

- Unlike the HAI Targeted Assessment for Prevention (TAP) Strategy and SIRs, there are no national SAAR goals.
- The SAAR target values may differ by facility based upon factors such as:
 - Original SAAR value
 - Stewardship priorities
 - Clinical relevance (for example, findings from MUE)

National SAAR distributions can help facilities identify SAAR target

- AU users can identify their **SAAR percentile** within the NHSN SAAR Reports for a given location.

Broad spectrum antibacterial agents predominantly used for hospital-onset infections used in adult SAAR wards

Facility Org ID	SAAR Type 2017 Baseline	Location	Summary Year/Month	CDC Location	Antimicrobial Days	Predicted Antimicrobial Days	Days Present	SAAR	SAAR p-value	95% Confidence Interval	SAAR Percentile
10009	Adult_BSHO_Ward_2017	MEDSURG64	2022M01	IN:ACUTE:WARD:MS	45	36.819	320	1.222	0.1852	0.902, 1.621	64

Example data

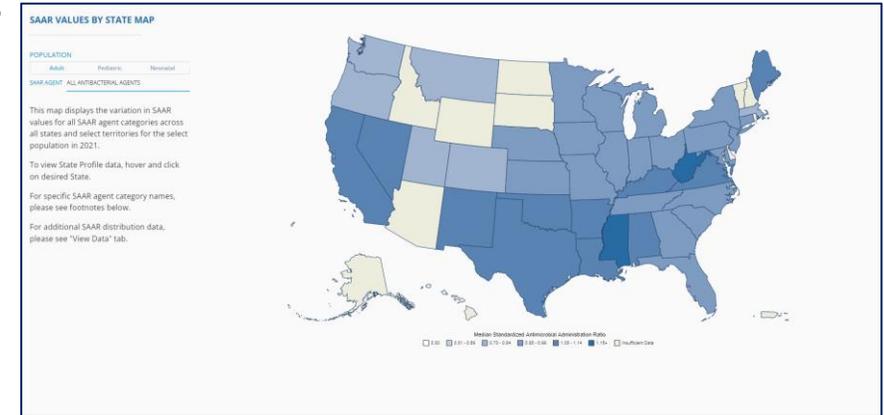

National SAAR distributions can help facilities identify SAAR target

- After identifying your **SAAR percentile**, you can use the SAAR distributions provided in the NHSN AU Data Reports to determine your **SAAR target** as clinically appropriate.

Table 2b. Adult broad spectrum antibacterial agents predominantly used for hospital-onset infections (Adult BSHO)																						
Table 2b1: Adult BSHO SAAR distributions, by SAAR location type																						
SAAR and 95% confidence limits (CL)				Percentile distribution of location-specific SAARs																		
Adult SAAR location type	SAAR	Lower CL	Upper CL	5th	10th	15th	20th	25th	30th	35th	40th	45th	50th	55th	60th	65th	70th	75th	80th	85th	90th	95th
Medical-surgical wards	1.065	1.063	1.066	0.329	0.472	0.571	0.655	0.722	0.794	0.867	0.936	0.996	1.052	1.109	1.168	1.233	1.286	1.357	1.442	1.533	1.666	1.881
Adult BSHO drugs: Amikacin (IV only), Aztreonam (IV only), Cefepime, Ceftazidime, Doripenem, Gentamicin (IV only), Imipenem with Cilastatin, Meropenem, Piperacillin with Tazobactam, Tobramycin (IV only)																						

NHSN Group Users may use several approaches to set SAAR targets

- Each state health department may use different SAAR targets
 - State-specific SAAR values in the Antibiotic Resistance and Patient Safety Portal can inform the SAAR targets
- Other group users may set different SAAR targets for the highest quartile compared to the other quartiles of facilities within the group.

The TAS framework is a dynamic process

Stewards may explore setting different SAAR targets and evaluate the clinical feasibility of each value, before deciding on the most appropriate final SAAR target.

TAS Reports – Overview

Amy Webb

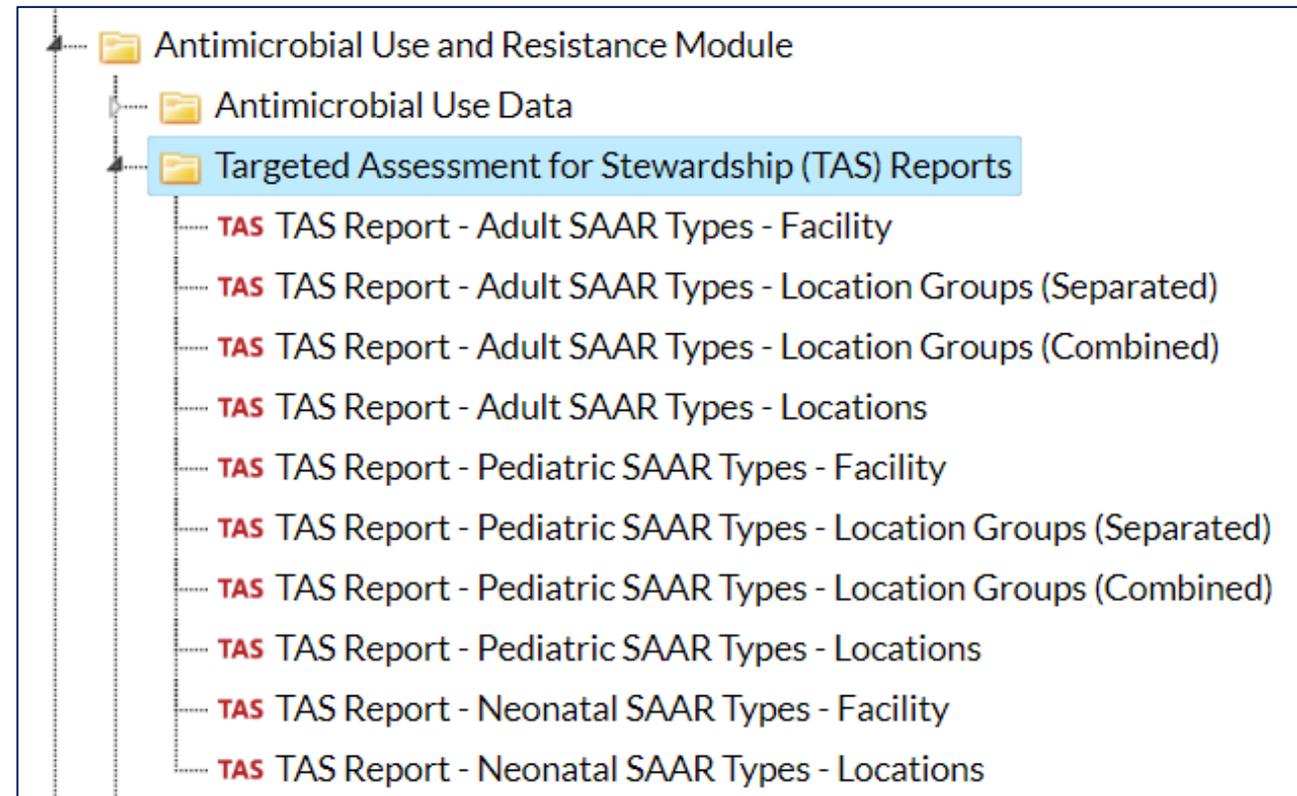

Who can generate the TAS Reports?

- Facility must:
 - AU data submitted for at least 1 of the most recent 12 months
 - At least 1 location that can generate SAARs (see screenshot)
- User must:
 - Have analysis rights
 - Generated data sets since 9/9/22

Location Group in TAS Reports	CDC Location Type	CDC Location Code
Adult Locations		
ICU	Medical Critical Care	IN:ACUTE:CC:M
ICU	Surgical Critical Care	IN:ACUTE:CC:S
ICU	Medical-Surgical Critical Care	IN:ACUTE:CC:MS
Stepdown	Adult Step Down Unit	IN:ACUTE:STEP
Ward	Medical Ward	IN:ACUTE:WARD:M
Ward	Surgical Ward	IN:ACUTE:WARD:S
Ward	Medical-Surgical Ward	IN:ACUTE:WARD:MS
Oncology	ONC General Hematology-Oncology Ward	IN:ACUTE:WARD:ONC_HONC
Pediatric Locations		
ICU	Pediatric Medical Critical Care	IN:ACUTE:CC:M:PED
ICU	Pediatric Medical-Surgical Critical Care	IN:ACUTE:CC:MS_PED
Ward	Pediatric Medical Ward	IN:ACUTE:WARD:M_PED
Ward	Pediatric Surgical Ward	IN:ACUTE:WARD:S_PED
Ward	Pediatric Medical-Surgical Ward	IN:ACUTE:WARD:MS_PED
Neonatal Locations		
N/A	Step down Neonatal Nursery	IN:ACUTE:STEP:NURS
N/A	Neonatal Critical Care (Level II/III)	IN:ACUTE:CC_STEP:NURS
N/A	Neonatal Critical Care (Level III)	IN:ACUTE:CC:NURS
N/A	Neonatal Critical Care (Level IV)	IN:ACUTE:CC:NURS_IV

Where can I find the TAS Reports in NHSN?

1. Analysis → Generate data sets
 - a) Leave beginning and ending dates blank
2. Analysis → Reports
 - a) AUR Module → TAS Reports

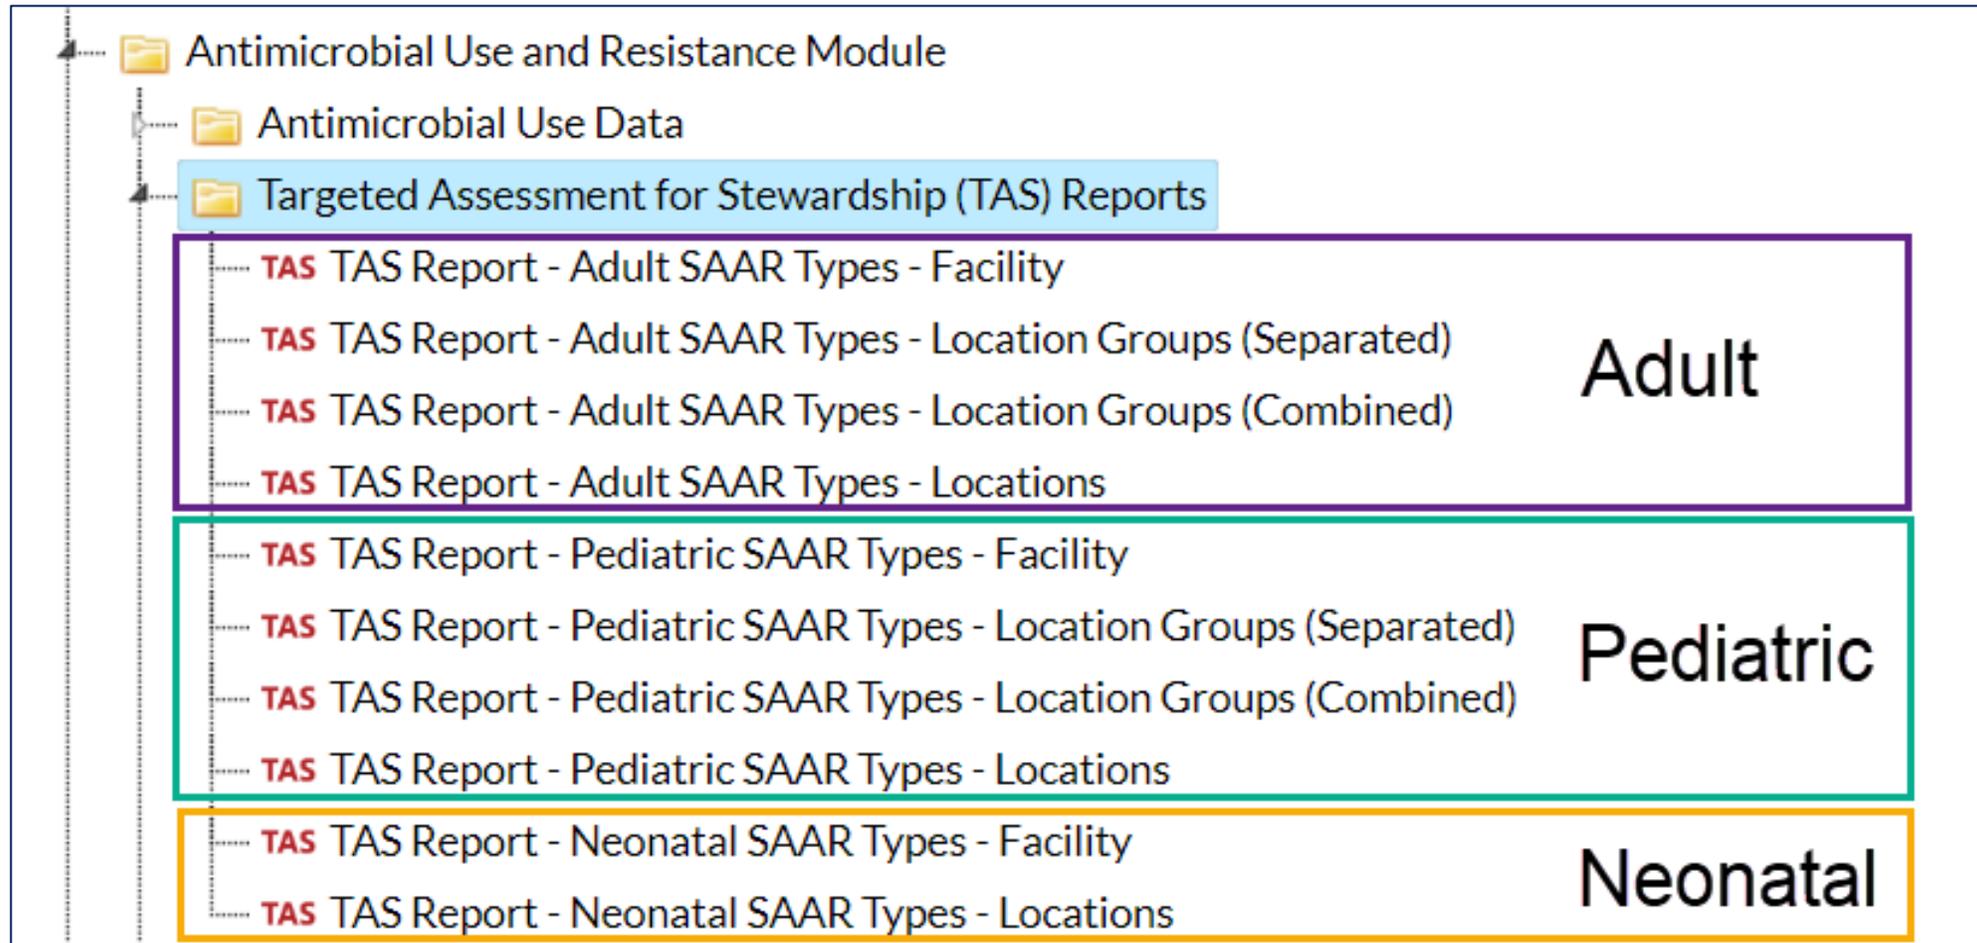

How to generate datasets:

<https://www.cdc.gov/nhsn/pdfs/ps-analysis-resources/generatedatasets-psc-508.pdf>

Why are there so many TAS Reports?

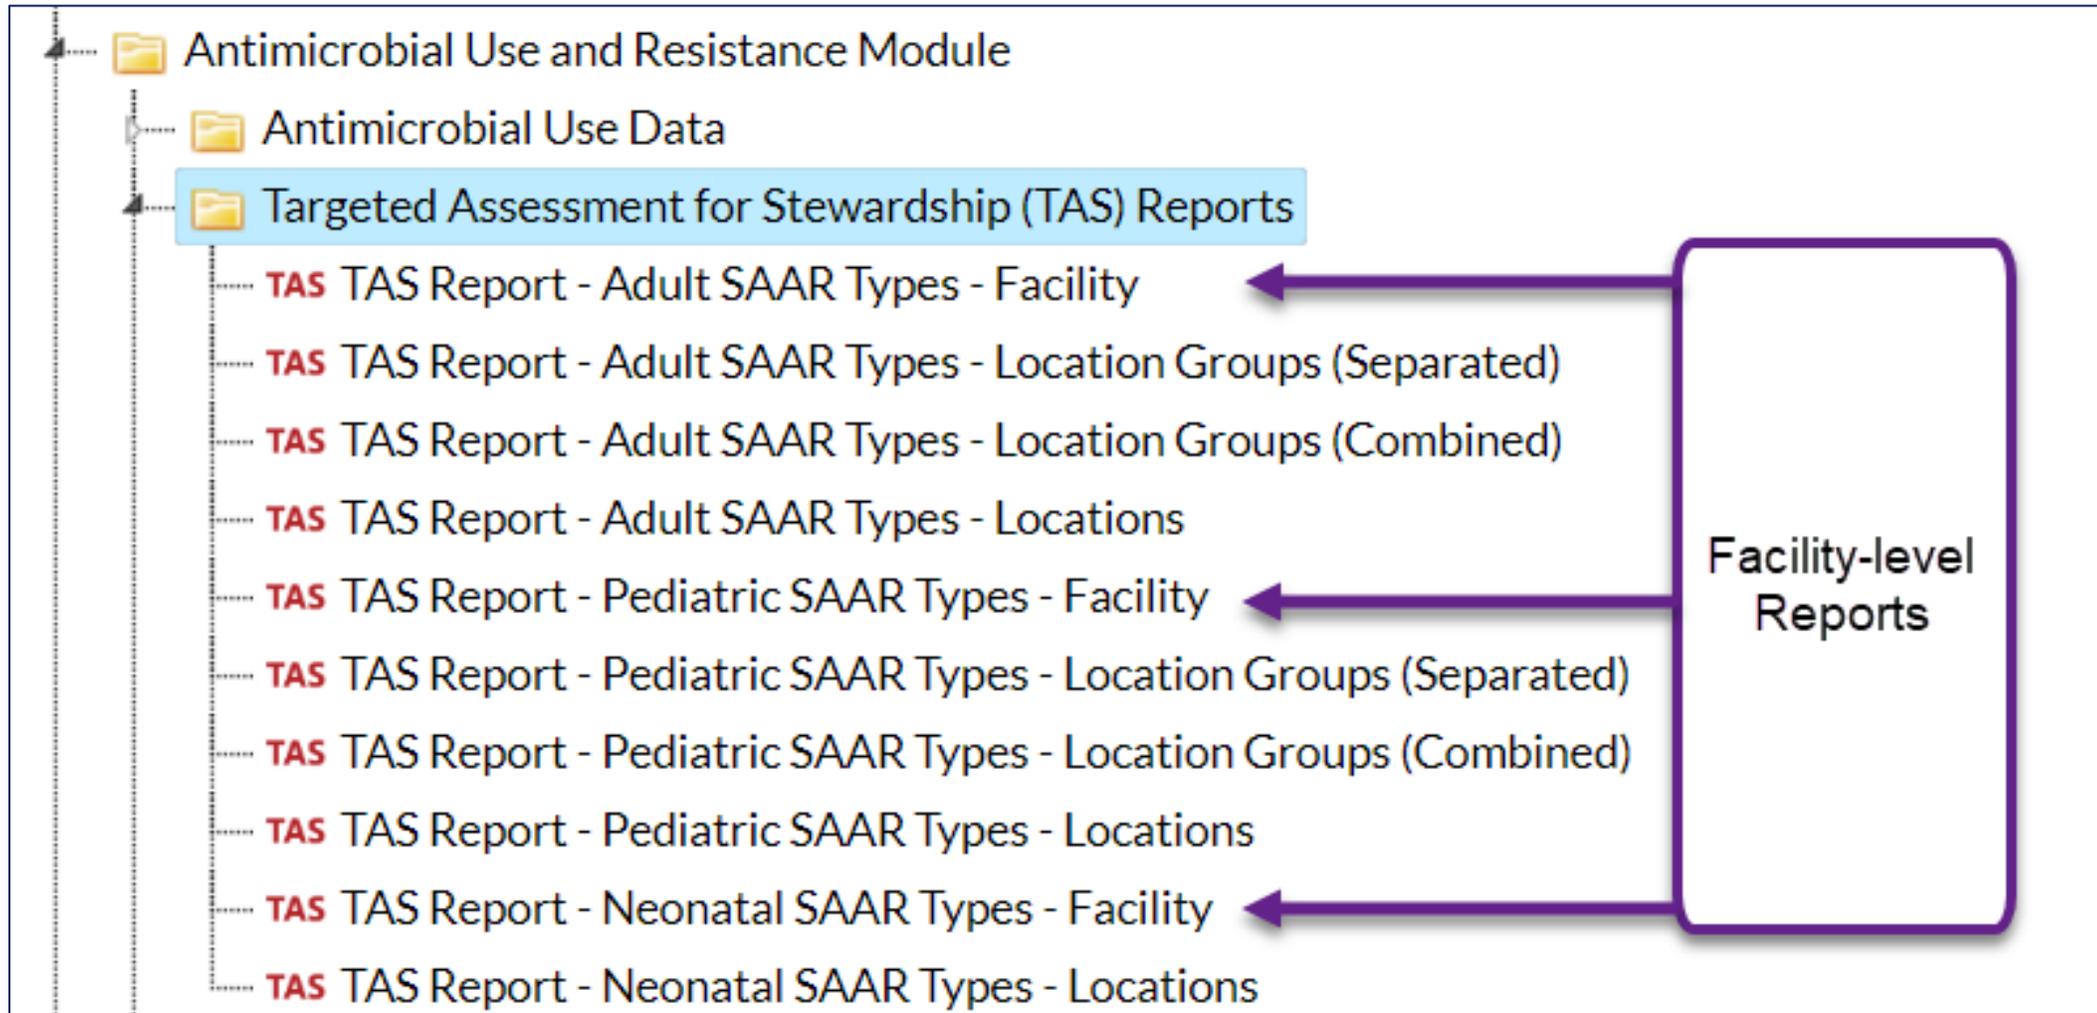

- Reports for each population: Adult, Pediatric, Neonatal

Why are there so many TAS Reports? (cont.)

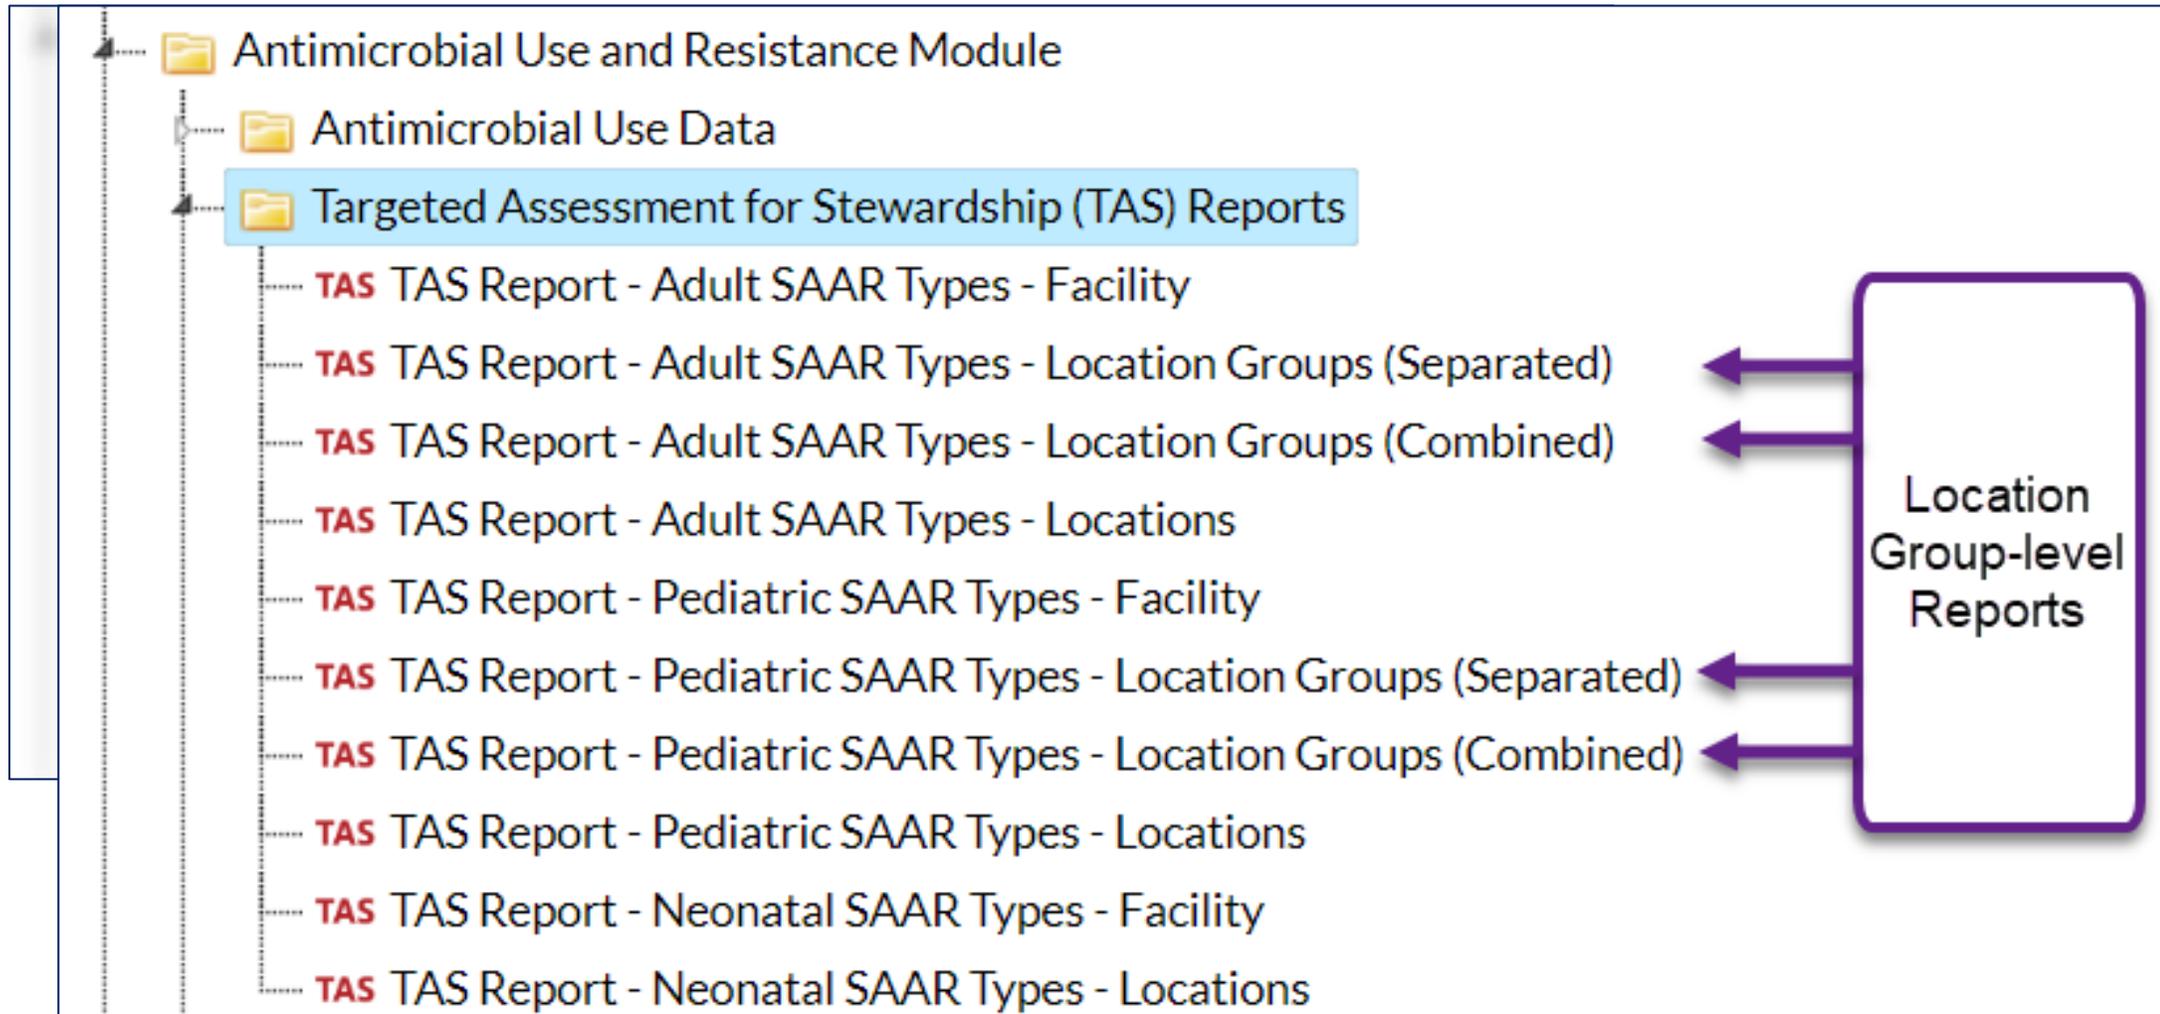

- Reports for each population: Adult, Pediatric, Neonatal
- Reports for various levels of aggregation:
 - Group (available for NHSN Groups)
 - Facility
 - Location Group
 - ICUs, Wards, Stepdown, Oncology
 - Location

Reports by level of aggregation

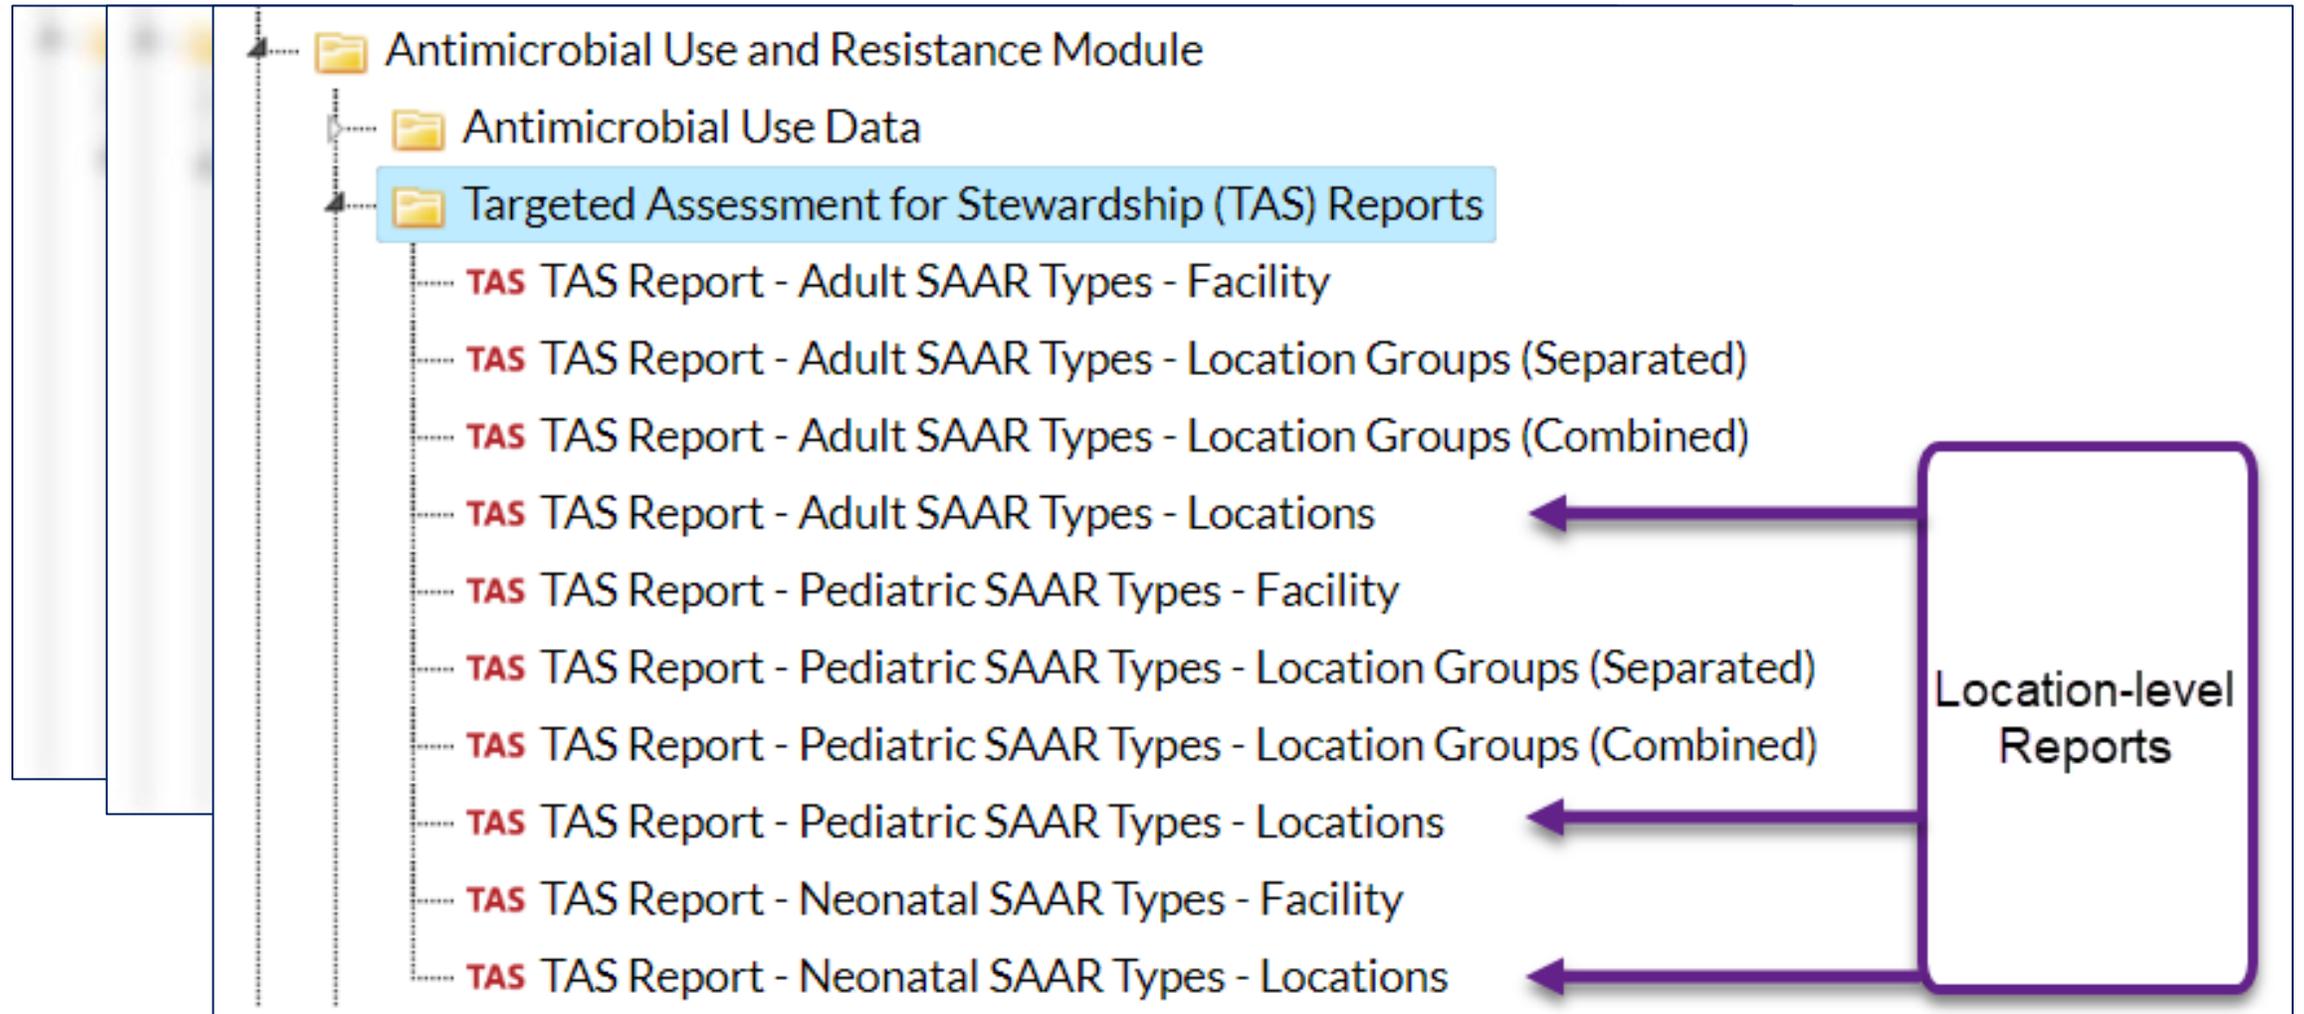

*Facility view

Reports by level of aggregation

*Facility view

Reports by level of aggregation

*Facility view

How do I enter SAAR targets?

- Click any TAS report then click Modify Report
- Click Display Options
 - Note the population
 - Enter each SAAR target value
 - After entering the targets click Save

The screenshot shows a web interface for modifying a TAS report. The title bar reads "Modify 'TAS Report - Adult SAAR Types - Facility'". Below the title bar, there is a checked checkbox labeled "Show descriptive variable names (Print List)". A navigation bar contains four tabs: "Title/Format", "Time Period", "Filters", and "Display Options", with the "Display Options" tab highlighted in green and marked with a purple circle containing the number 1. Below the tabs, the "TAS Options:" section includes a "Group by:" dropdown menu set to "Cumulative" and a "Population:" dropdown menu set to "Adult", with a purple circle containing the number 2 next to the "Adult" selection. A purple-bordered box highlights a list of SAAR target categories, each with a text input field containing the number 1. The categories are: "All Antibacterials", "BSHO", "BSCA", "GramPos", "NSBL", "CDI", and "Antifungal". A purple circle containing the number 3 is positioned to the right of the "GramPos" input field. At the bottom of the form, there are two buttons: "Reset" and "Save", with a purple circle containing the number 4 next to the "Save" button.

More about SAAR targets

- Can I change my SAAR targets after I set them? **Yes**

More about SAAR targets

- Can I change my SAAR targets after I set them? **Yes**
- Do I need to set SAAR targets for each individual TAS report (for example, facility level report v. location level report)? **No**

More about SAAR targets

- Can I change my SAAR targets after I set them? **Yes**
- Do I need to set SAAR targets for each individual TAS report (for example, facility level report v. location level report)? **No**
- Can I set different SAAR targets for different locations (MedWard v SurgWard) or location groups (ICU v Ward)? **No**
 - Can I set different SAAR targets for different facilities in my NHSN Group? **No**

More about SAAR targets

- Can I change my SAAR targets after I set them? **Yes**
- Do I need to set SAAR targets for each individual TAS report (for example, facility level report v. location level report)? **No**
- Can I set different SAAR targets for different locations (MedWard v SurgWard) or location groups (ICU v Ward)? **No**
- Do my SAAR targets need to all be the same value (for example, 1.0) across all SAAR Types? **No**

- When I change my SAAR targets, does it affect other users' SAAR targets? **No**
- Can anyone else see my SAAR targets? **No**

Important reminders

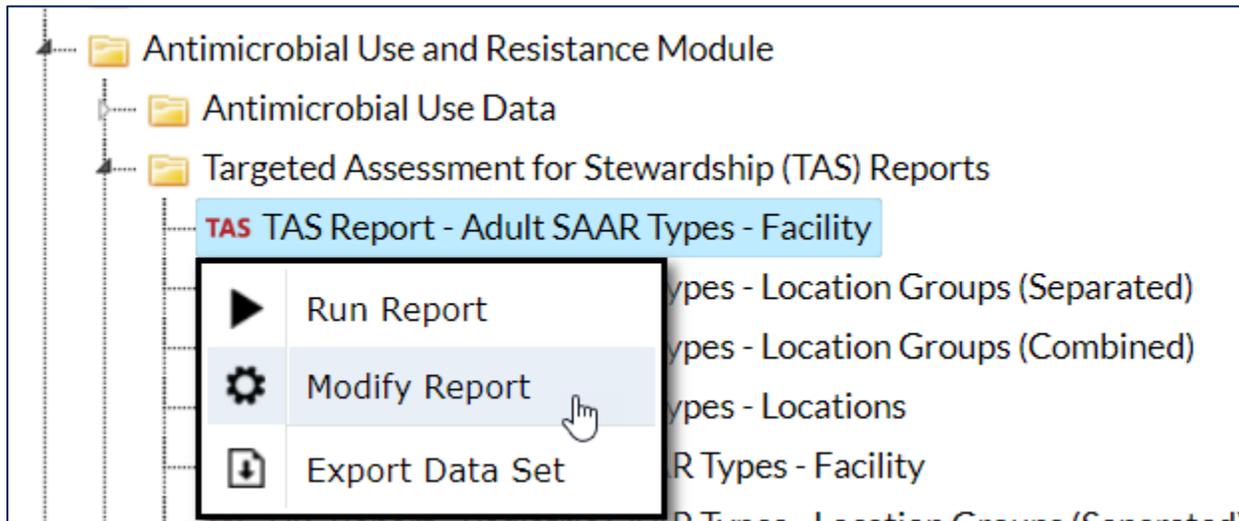

- TAS reports only include:
 - Data uploaded for the most recent 12 months
 - Example: When generating the TAS reports today (9/27), they will include all AU data uploaded for Sept 2021 – Aug 2022
 - ****Generate new data sets to include recently uploaded data****
 - Locations that can generate SAARs
 - **No “facility-wide” metrics available in TAS reports & dashboard**

TAS Reports – Facility Level

Amy Webb

An example

- The TAS Reports have just been introduced in NHSN.
- Let's explore the reports with a SAAR target of 1.0.

		BSCA	3	-2958	ERTA(8); GEMIF(8); MOXI(8);	5371	8328.744	52759	0.645	0.628, 0.662
		GRAMPOS	4	-2987	QUINWD(13); CEFTAR(12); TELAV(12);	3385	6372.250	52759	0.531	0.514, 0.549
		CDI	5	-5368	CEFTAZ(9); GEMIF(9); MOXI(9);	5037	10404.835	52759	0.484	0.471, 0.498
		BSHO	6	-7964	CEFTAZ(17); CEFEP(16); IMIPWC(16);	2757	10720.680	52759	0.257	0.248, 0.267
		ALL	7	-11376	AMOX(2); CEFTAZ(2); MINO(2);	25893	37269.485	52759	0.695	0.686, 0.703

1. Tables include the most recent 12 months of reported data from locations for which SAARs are generated. If SAAR Type-level AU-CADs are the same, their ranks are tied.
2. AU-CAD = Observed Antimicrobial Days - (Predicted Antimicrobial Days * Facility Identified SAAR Target)
3. When selecting a SAAR Target, consider the lower bound of the SAAR Confidence Interval. See the TAS User Guide for further details.
4. A negative AU-CAD value means the SAAR Target was greater than the current SAAR value for that category. To increase your SAAR value, the negative AU-CAD value represents the number of antimicrobial days to add per time period to reach your SAAR Target.
5. The drug code and full drug name can be found here: <http://www.cdc.gov/nhsn/xls/aur/aur-eligible-antimicrobial-agents.xlsx>.
6. If the observed antimicrobial days exceed days present for a specific SAAR category, neither the SAAR nor the AU-CAD will be calculated, and data should be validated for accuracy.

Facility AU-CAD interpretation

**National Healthcare Safety Network
TAS Report - Adult SAAR Types - Facility
Adult SAAR Types Ranked by AU-CAD
Facility Identified SAAR Targets: All antibacterials = (1); BSHO = (1); BSCA**

As of: September 26, 2022 at 9:44 AM
Date Range: All AU_TAS
if (((population = "ADULT")))

To get to an NSBL SAAR of 1.0, the facility would have needed to reduce the use of antimicrobials in the NSBL category by roughly 1244 antimicrobial days over the last 12 months.

Antifungal = (1)

Facility Org ID	Facility Name	SAARTypeCat	AU-CAD Rank	Facility AU-CAD (Rounded)	Three highest use drugs within SAAR Type (Percentage)	Antimicrobial Days	Predicted Antimicrobial Days	Days Present	Location SAAR	95% Confidence Interval

TAS Reports – Group Level

Laura Blum

Group TAS reports overview

- Group TAS reports similar to facility TAS reports
 - Group TAS reports display metrics pooled at the group level and for each member facility
 - All options for the facility TAS Reports are available to groups except “Combined” location groups report
- Instead of “Facility” reports, groups have “Group and Facility” reports

Group TAS Report – Group and Facility: First table

- First table is group-level summary of most recent 12 calendar months of data with additional fields available only to groups
- Interpretation of group-level metrics slightly different

National Healthcare Safety Network

TAS Dashboard

Laura Blum

TAS Dashboard overview

- Allows NHSN facilities to visualize locations with the greatest need for antimicrobial stewardship
- Displays AU-CADs over time, by quarter, for most recent complete four calendar quarters at the facility and location level
- Unlike TAS Reports, users cannot change the time period and level of aggregation displayed

Accessing the TAS Dashboard

- Located on NHSN Patient Safety Component Home Page or by navigating to Dashboard and then TAS Dashboard from the left-hand menu in NHSN

The screenshot displays the NHSN Patient Safety Component Home Page. At the top left is the CDC logo with the text "Centers for Disease Control and Prevention" and "CDC 24/7: Saving Lives, Protecting People™". At the top right is the NHSN logo with the text "NATIONAL HEALTHCARE SAFETY NETWORK". Below the logos is a dark blue header bar with "NHSN - National Healthcare Safety Network" on the left and a user profile "XGA6" with "_CDA-XYZ Test Facility (Prod)" on the right. A left-hand navigation menu is visible, listing "NHSN Home", "Alerts", "Dashboard", "Reporting Plan", "Patient", and "Event". The "Dashboard" menu item is expanded, showing "TAP Strategy" and "TAS Dashboard". A red arrow points to the "TAS Dashboard" link in the expanded menu. Another red arrow points to the "NHSN Patient Safety Component Home Page" link at the top of the main content area. A third red arrow points to a "TAS Dashboard" link in a sub-menu below "TAP Strategy".

TAS Dashboard set-up: Generate data sets

- Generate New button generates data sets for all NHSN Patient Safety Component modules just like navigating to Analysis and then Generate Data Sets from the left-hand menu
- Last Generated date displays the last time you ran a data set generation
- Always generate new data sets after uploading data into NHSN

TAS Dashboard set-up: SAAR targets

- Same as SAAR targets used for the TAS Reports
 - Unique to your NHSN user account, can be changed at any time
- TAS Dashboard displays AU-CAD data based on the SAAR targets you entered when you click Save
- For this example, we entered SAAR targets of 0.40 for each SAAR type

GRAMPOS SAAR Number of Antimicrobial Days to Reduce to Reach Facility Specific SAAR

Medical-surgical ward (MEDSURG64) had highest AU-CAD value among the locations that contributed to 2021Q2 adult GRAMPOS SAAR. To reduce MEDSURG64's 2021Q2 adult GRAMPOS SAAR to SAAR target of 0.40, we would have needed to reduce use of adult GRAMPOS agents in MEDSURG64 by approximately 115 antimicrobial days.

TAS Dashboard drilldown: Table

- Table below TAS Dashboard drilldown graph repeats information from the graph with the addition of observed antimicrobial days, predicted antimicrobial days, and three highest use drugs within the SAAR type/quarter combo for each location

SAAR Type	Summary Year/Quarter	Location Rank	Location	Location Code	AU Days Predicted	Observed Antimicrobial Days	Location AU-CAD	Three highest use drugs within SAAR Type
GRAMPOS	2021Q2	1	MEDSURG64	IN:ACUTE:WARD:MS	325.114	245	115	CEFTAR(14); DALBA(14); ORITAV(14);
		2	ONCGEN	IN:ACUTE:WARD:ONC_HONC	321.301	239	110	CEFTAR(16); DALBA(16); ORITAV(14);
		3	SURGWARD	IN:ACUTE:WARD:S	281.105	216	104	DAPTO(17); DALBA(15); TEDIZ(15);
		4	AD_STP_DN	IN:ACUTE:STEP	361.01	236	92	ORITAV(15); LNZ(14); TELAV(13);
		5	MEDWARD	IN:ACUTE:WARD:M	282.987	204	91	TEDIZ(16); CEFTAR(14); ORITAV(14);
		6	SICU	IN:ACUTE:CC:S	466.633	202	15	DAPTO(15); LNZ(15); CEFTAR(14);
		7	MICU	IN:ACUTE:CC:M	575.707	243	13	CEFTAR(17); LNZ(15); TEDIZ(13);
		8	MSICU	IN:ACUTE:CC:MS	647.553	202	-57	QUINWD(16); LNZ(15); ORITAV(14);

TAS Dashboard drilldown: Three highest use drugs

- Displays top three antimicrobials that contributed to the selected SAAR antimicrobial category for the selected quarter for each location and, in parenthesis, the percent of observed antimicrobial days each antimicrobial contributed rounded to the nearest whole number
 - Drug names abbreviated with NHSN drug codes; full drug names can be found in the [AUR Module Eligible Antimicrobial Agents spreadsheet](#)
 - If two or more antimicrobials contributed the same observed antimicrobial days, they are listed in alphabetical order by drug code

SAAR Type	Summary Year/Quarter	Location Rank	Location	Location Code	AU Days Predicted	Observed Antimicrobial Days	Location AU-CAD	Three highest use drugs within SAAR Type
GRAMPOS	2021Q2	1	MEDSURG64	IN:ACUTE:WARD:MS	325.114	245	115	CEFTAR(14); DALBA(14); ORITAV(14);
		2	ONCGEN	IN:ACUTE:WARD:ONC_HONC	321.301	239	110	CEFTAR(16); DALBA(16); ORITAV(14);
		3	SURGWARD	IN:ACUTE:WARD:S	281.105	216	104	DAPTO(17); DALBA(15); TEDIZ(15);
		4	AD_STP_DN	IN:ACUTE:STEP	361.01	236	92	ORITAV(15); LNZ(14); TELAV(13);
		5	MEDWARD	IN:ACUTE:WARD:M	282.987	204	91	TEDIZ(16); CEFTAR(14); ORITAV(14);

Three highest use drugs: Interpretation

- CEFTAR, DALBA, and ORITAV tied as most frequently administered antimicrobials in the adult GRAMPOS antimicrobial category for MEDSURG64 in 2021Q2 so they are listed in alphabetical order by drug code
- CEFTAR, DALBA, and ORITAV each contributed 14% of the observed 245 antimicrobial days

SAAR Type	Summary Year/Quarter	Location Rank	Location	Location Code	AU Days Predicted	Observed Antimicrobial Days	Location AU-CAD	Three highest use drugs within SAAR Type
GRAMPOS	2021Q2	1	MEDSURG64	IN:ACUTE:WARD:MS	325.114	245	115	CEFTAR(14); DALBA(14); ORITAV(14);
		2	ONCGEN	IN:ACUTE:WARD:ONC_HONC	321.301	239	110	CEFTAR(16); DALBA(16); ORITAV(14);
		3	SURGWARD	IN:ACUTE:WARD:S	281.105	216	104	DAPTO(17); DALBA(15); TEDIZ(15);
		4	AD_STP_DN	IN:ACUTE:STEP	361.01	236	92	ORITAV(15); LNZ(14); TELAV(13);
		5	MEDWARD	IN:ACUTE:WARD:M	282.987	204	91	TEDIZ(16); CEFTAR(14); ORITAV(14);
		6	SICU	IN:ACUTE:CC:S	466.633	202	15	DAPTO(15); LNZ(15); CEFTAR(14);
		7	MICU	IN:ACUTE:CC:M	575.707	243	13	CEFTAR(17); LNZ(15); TEDIZ(13);
		8	MSICU	IN:ACUTE:CC:MS	647.553	202	-57	QUINWD(16); LNZ(15); ORITAV(14);

TAS Dashboard for groups

- NHSN groups can also use TAS Dashboard to visualize overall AU-CADs for the group and member facilities
 - Group TAS Dashboard displays AU-CADs pooled at the group level
 - Clicking into the drilldown allows groups to view cumulative AU-CADs for each member facility
- All options for the facility TAS Dashboard are available to groups except location-level data and top three highest drugs
 - These options *are* available in the group TAS reports
- Interpretation of group-level AU-CADs slightly different

TAS Dashboard for groups: Set-up

- SAAR targets function similarly at the group and facility level
- Special considerations for groups:
 - Groups cannot set different SAAR targets for each member facility
 - Setting SAAR targets at the group level does not affect member facilities' SAAR targets or SAAR data
- For this example, we entered SAAR targets of 1.2 for the adult ALL SAAR type and 0.2 for everything else

Group AU TAS Report Dashboard by Quarter

For member facilities to collectively reduce their 2021Q3 adult BSHO SAARs to meet our SAAR target of 0.20, they would have needed to reduce use of adult BSHO agents by at least 449 antimicrobial days.

Assess & Steward

Melinda Neuhauser

Assess: Utilize assessment tools to identify gaps and opportunities to improve antimicrobial use

- Select the assessment approach that best aligns with the facility priorities, resources and stewardship activities
 - Comprehensiveness of Antimicrobial Stewardship Program
 - NHSN Annual Hospital Survey
 - Antibiotic Stewardship Program Assessment Tool
 - Identification of opportunities to improve antimicrobial use
 - Strategies to Assess Antibiotic Use to Drive Improvements in Hospitals
 - Appropriate use assessment such as medication use evaluations

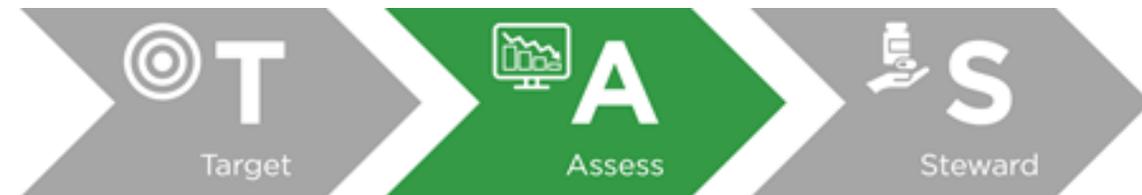

Assessment tool: <https://www.cdc.gov/antibiotic-use/healthcare/pdfs/assessment-tool-P.pdf>

Strategies: <https://www.cdc.gov/antibiotic-use/healthcare/pdfs/Strategies-to-assess-antibiotic-use-in-hospitals-508.pdf>

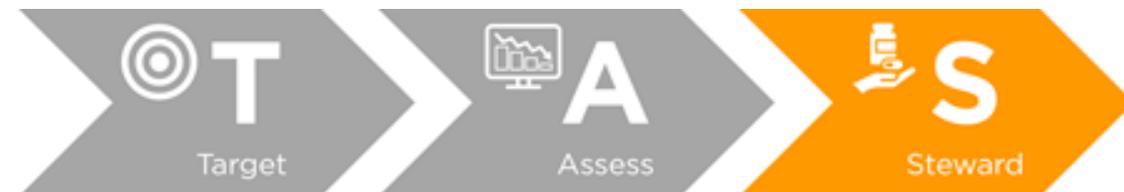

Assess: Identify gaps and opportunities to improve antimicrobial use

- Once the assessments have been completed, the findings can be summarized and presented to the antimicrobial stewardship committee and/or other hospital committees, such as Pharmacy and Therapeutics.
 - The assessment may determine that use is appropriate based upon local guidelines and practices.

Steward: Implement antimicrobial stewardship activities to address gaps and opportunities to improve antibiotic use

- Once the findings have been summarized and presented as part of the assessment, the antimicrobial stewardship program can embark on planning and implementing antimicrobial stewardship activities addressing the identified gaps and opportunities.
- TAS guide includes CDC stewardship resources for facilities to expand components of their antimicrobial stewardship program.

The TAS framework consists of three components:

- 1. Target:** Run TAS Reports in NHSN to identify facilities, location groups and locations for further assessment using the ranked AU cumulative attributable difference (AU-CAD).
- 2. Assess:** Utilize assessment tools to identify gaps and opportunities to improve antibiotic use.
- 3. Steward:** Implement antibiotic stewardship activities to address gaps and opportunities.
