# Core Elements for Effective Research to Practice

# r2p Past: Reach

- Publications and products
  - Webpages
  - Print materials
  - App
- Audiences
- Channels
  - Twitter
  - Facebook
  - Flickr
  - Blog
  - Wikipedia
- Outputs
  - How much out
  - How many reached
- Metrics
  - Website traffic
  - Download totals
  - Facebook likes (fans)
  - YouTube views
  - Blog traffic
  - Twitter followers, aggregate retweets
  - eNews subscribers
  - Journal articles placed
  - Print publication distribution

# r2p Present

- Pocket Guide
- NMAM
- Nurse violence prevention training
- Asphalt
- Youth@Work

# r2p Future: Beyond Reach

- How can we **engage** our audience?
- How can we get the information in our communication products **used**?
- How can we influence **changes/impact** to improve safety and health?

# RTO's Highly Skilled and Innovative Staff

## Core Elements

# Technology Transfer

- Patents
- Partnership agreements
- Intellectual property

# R2P Tools

- A business approach
- CPWR Roadmap
- CDC Knowledge to Action (K2A) Framework
- Diffusion of Innovations

# Entrepreneurial Thinking

- Price, place, promotion, product
- Is this product commercially viable?

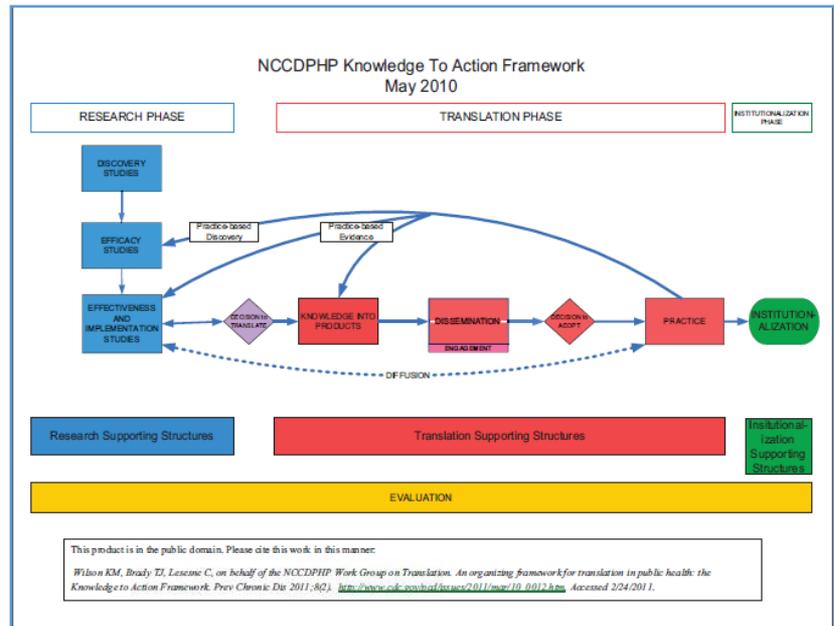

# CPWR Roadmap

- Establish goals
- Determine audiences
- Describe dissemination products and channels
- Form partnerships

# Knowledge to Action

- Decision points during three phases
  1. Research
  2. Translation
  3. Institutionalization

# Diffusion of Innovations

- Relative advantage
  - Is the innovation better than what was there before?
- Compatibility
  - Does the innovation complement current approaches?
- Complexity
  - Is the innovation easy to use?
- Trialability
  - Can the innovation be tried before making a decision to adopt?
- Observability
  - Are the results of the innovation visible and easily measurable?

# Occupational Health Safety Network

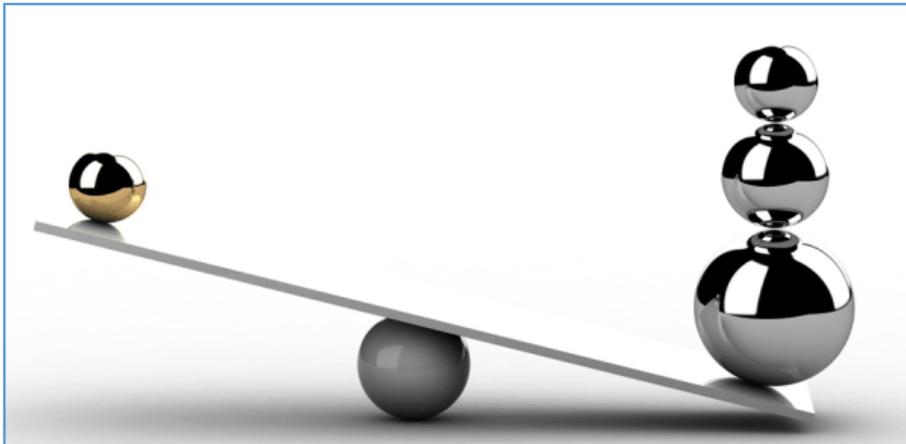

- **Goal:** By the end of 2015, OHSN will have a total of 200 participating healthcare facilities
- **Strategy:** Develop a suite of products to highlight attributes that may enhance the likelihood of adoption

# Relative Advantage

- Without OHSN

- No standardized reporting mechanisms.
- Ad hoc feedback on safety trends.

- With OHSN

- Most common injuries identified.
- Comparisons to other hospitals available.
- Effectiveness of interventions analyzed.
- Intervention tools available.
- OSHA and other regulatory reports automatically generated.

# Compatibility

- Hospitals already
  - Use computers to record injury data
  - Record the same data fields required by OHSN
  - Need to generate injury reports

# Complexity

- The software has been tested and is easy to use
- It is simple to join the network
- Hospitals do not have to perform any back-end programming

# Trialability

- Requires login information; cannot be tried before joining
- A “test-drive” feature would enable users to experience benefits without pressure or commitment

# Observability

- Observable advantage: OHSN is relatively new, so users may not yet be able to observe injury reductions
- Peer network observation: There is no mechanism for advertising participation to peers

# Product Mix

	Relative Advantage	Compatibility	Complexity	Trialability	Observability

# Research to Practice at NIOSH

- Not limited to an office
- Has a practical, applied focus
- Requires collaboration, streamlined processes, and useful tools
