RECORD OF ISSUE/REVISIONS			
ISSUE AUTHORIZATION DATE	EFFECTIVE DATE	REV. NO.	DESCRIPTION
1/7/2013	1/7/2013	0	New document to determine the effect on previously completed claims due to revision to DCAS-TKBS-0005.

**1.0 Description**

Revision 1 of the Technical Basis Document for Baker-Perkins Company Saginaw, Michigan (DCAS-TKBS-0005) was issued on 5/01/2012. The previous version (revision 0) was issued on 2/17/2011. Prior to that, dose estimates for Baker-Perkins used Appendix P of Battelle-TBD-6001 which was issued 9/14/2007. Also, some Baker-Perkins dose reconstructions were completed prior to that using a complex wide overestimating method.

**2.0 Issue Evaluation**

Several changes in the methods used to reconstruct doses at Baker-Perkins resulted in both inhalation and external doses being higher for some job categories when compared to previous methods. Since only 8 claims have been completed for this site, each with a probability of causation below 50%, all 8 were reevaluated using revision 1 of the TBD. Therefore, no additional consideration of the changes is necessary.

**3.0 Plan for Resolution or Corrective Action**

Internal and external dose was recalculated for all eight of the Baker-Perkins claims using all currently approved methods. The resulting probability of causation was less than 45% for each of the eight claims with the highest less than 15%. The probability of causation increased for 3 of the claims, but decreased for the other 5.

As a result of this review, the revision to DCAS-TKBS-0005 did not result in the probability of causation of any previously completed claims rising to greater than 50%. A listing of those claims evaluated and their final disposition will be forwarded to the Department of Labor.
