To the Editor:

The authors of “A Catalog of Biases in Questionnaires” in the January issue (1) provide a useful catalog of questionnaire biases, but in one of their examples, their recommended response is guilty of the same bias. This error occurs in Overlapping Interval.

Example:

How many cigarettes do you smoke per day?

None 5 or less 5–25 25 or more

The authors’ recommended question was:

How many cigarettes do you smoke per day?

None 4 or less 5–24 25 or more

While this corrects the ambiguity of the first question for respondents who smoke exactly 5 or 25 cigarettes per day, it maintains the ambiguity for nonsmokers. The recommended question should be:

How many cigarettes do you smoke per day?

None 1–4 5–24 25 or more
