## Introduction to the YRBSS

### Introduction

The YRBSS was developed in 1990 to monitor priority health risk behaviors and experiences that contribute markedly to the leading causes of death, disability, and social problems among youth and adults in the United States. These behaviors, often established during childhood and early adolescence, include

- **Student demographics:** sex, sexual identity, race and ethnicity, and grade
- **Youth health behaviors and conditions:** sexual, injury and violence, bullying, diet and physical activity, obesity, and mental health, including suicide
- **Substance use behaviors:** electronic vapor product and tobacco product use, alcohol use, and other drug use
- **Student experiences:** parental monitoring, school connectedness, unstable housing, and exposure to community violence

From 1991 through 2021, the YRBSS has collected data from more than 5 million high school students in more than 2,200 separate surveys.

---

### Uses of YRBSS Results

The YRBSS was designed to

- Determine the prevalence of health risk behaviors.
- Assess whether health risk behaviors increase, decrease, or stay the same over time.
- Examine the co-occurrence of health risk behaviors.
- Provide comparable national, state, territorial, tribal, and local data.
- Provide comparable data among subpopulations of youth.
- Monitor progress toward achieving the Healthy People objectives and other program indicators.

---

### Components of the YRBSS

The YRBSS includes national, state, territorial, tribal government, and local school-based surveys of representative samples of 9th through 12th grade students. These surveys are conducted every two years, usually during the spring semester. However, due to the COVID-19 pandemic, the 2021 national YRBS and most state, territorial, tribal government, and local surveys were conducted in the fall semester. The national survey, conducted by CDC, provides data representative of 9th through 12th grade students in public and private schools in the United States. The state, territorial, tribal government,

and local surveys, conducted by departments of health and education, provide data representative of mostly public high school students in each jurisdiction.

The YRBSS also includes additional surveys conducted by CDC:

- A middle school survey conducted by interested states, territories, tribal governments, and local school districts.
- A 2010 study to measure physical activity and nutrition-related behaviors and determinants of these behaviors among a nationally representative sample of high school students.
- A series of methods studies conducted in 1992, 2000, 2002, 2004, and 2008 to improve the quality and interpretation of the YRBSS data.
- The National Alternative High School Youth Risk Behavior Survey conducted in 1998 among a representative sample of almost 9,000 students in alternative high schools.
- The National College Health Risk Behavior Survey conducted in 1995 among a representative sample of about 5,000 undergraduate students.

---

## Methods

The national Youth Risk Behavior Survey (YRBS) uses a three-stage cluster sample design to produce a representative sample of 9th through 12th grade students. The target population consisted of all public, Catholic, and other private school students in grades 9 through 12. A weighting factor was applied to each student record to adjust for nonresponse and the oversampling of black and Hispanic students in the sample. The final, overall weights were scaled so the weighted count of students was equal to the total sample size, and the weighted proportions of students in each grade matched population projections for each survey year. Because of the complexity of the cluster sampling design used, a statistical software package that can calculate sampling variance appropriately must be used. This document provides the information needed to correctly use and analyze data from the 2021 national YRBS.

## For More Information

Visit the YRBSS web site at [www.cdc.gov/yrbss](http://www.cdc.gov/yrbss) for more information on the YRBSS, its methodology, data analysis, and answers to frequently asked questions.

## Sample Description

**School Level Selection** All regular public, Catholic, and other private school students, in grades 9 through 12, in the 50 States and the District of Columbia were included in the sampling frame for the 2021 national YRBS. Puerto Rico, the trust territories, and the Virgin Islands were excluded from the frame. Schools were selected systematically with probability proportional to enrollment in grades 9 through 12 using a random start. Two hundred and nine schools were sampled.

---

**Class Level Selection** All classes in a required subject or all classes meeting during a particular period of the day, depending on the school, were included in the sampling frame. Systematic equal probability sampling with a random start was used to select classes from each school that participated in the survey.

---

**Response Rates** The 2021 national YRBS attained the following response rates:

School response rate - 152 of the 209 sampled schools participated.

$$152/209 = 72.7\% \text{ school response rate}$$

Student response rate – 17,508 of the 21,791 sampled students submitted questionnaires; 17,232 questionnaires were usable after data editing.

$$17,232/21,791 = 79.1\%$$

Overall response rate = School response rate \* Student response rate

$$79.1\% * 72.7\% = 57.5\%$$

## Data Edits

**Introduction** Data edits consist of checking responses for range, height/weight plausibility, and logical consistency. Data deemed invalid are set to missing.

**Single Question Edits**

- If the response to a question does not correspond to one of the possible responses, the response for that question is invalid and is set to missing. This can occur if the only response options for a question are “A” or “B” and the response recorded is “C”, “D”, “E”, “F”, “G”, or “H”, for example.
- If more than one response is selected for a question, the response for that question will be considered invalid and set to missing. The one exception is the race question (Q5), which can have multiple responses.

**Height and Weight Edits**

Height is read as a three-column character variable. It is not compressed or justified by the scanning program. The possible responses for the first column range from “3” to “7” and indicate feet; the possible responses for the second and third columns range from “00” to “11” and indicate inches. The height in feet and inches is converted to height in meters using the formula below.

$$\text{Height (in m)} = [(\text{feet} \times 12) + \text{inches}] \times 0.0254 \text{ m/in}$$

- If either feet or inches is not filled in or is unreadable, then Height is set to missing.
- If Weight is missing or set to missing, then Height is set to missing.

Weight is read as a three-column character variable. It is not compressed or justified by the scanning program. The first column indicates 100s of pounds ranging from “0” to “3”; the second column indicates 10s of pounds and ranges from “0” to “9”; the third column indicates single pounds and ranges from “0” to “9”. The weight in pounds is then converted to weight in kilograms using the following formula:

$$\text{Weight (in kg)} = \text{Weight (in lbs)} \times 0.4536 \text{ kg/lb}$$

- If the first column is left blank, it is assumed to be a “0”.
- If the first column is unreadable, all columns are set to missing and Weight is set to missing.
- If column two or column three is left blank or is unreadable, all columns are set to missing and Weight is set to missing.

- If Height is missing or set to missing, then Weight is set to missing.

**Body Mass Index (BMI) Edits**

BMI is calculated using Height and Weight in the following formula:

$$BMI = kg/m^2 = Weight (in kg) / [Height (in m)^2]$$

- If Height or Weight are missing, BMI is set to missing
- If age or sex is missing, Height, Weight, and BMI are set to missing because the biologically implausible limits (see next section) are based on age and sex.

**Biologically Implausible Value Edits**

When the basic edits for BMI are complete, further edits are applied to Height, Weight, and BMI to ensure the results are biologically plausible. Height, Weight, and BMI are set to missing when an observation lies outside the following limits developed by the Division of Nutrition, Physical Activity and Obesity, CDC. **Logical Consistency Edits**

The majority of the edit criteria compare two questions at a time to ensure logical consistency. If responses from two questions conflict logically, both questions are set to blank. (Exception – data from demographic questions are not set to missing in this case.)

For modified questionnaires, there may be additional edit criteria for site-added questions. Site-added questions are only edited among themselves. If necessary, demographic variables also may be used to edit against the site-added questions. However, no other standard variables are used to cross-edit with site-added questions, maintaining the integrity of internal consistency among standard questions.

Lists of the logical edits used for the 2021 high school and middle school questionnaires follow. If the edit criteria are met, data from the questions are changed to missing, unless they are demographic questions.

**Note:** Site-added questions are not edited against standard questions. Some sites have added standard high school questions to the middle school questionnaire. These questions are considered site-added for the middle school questionnaire and are not edited the same as they are in the high school questionnaire.

**Subverting  
Records**

Subverting eliminates records that are judged too incomplete overall to be valid for analysis. Records are marked “subverted” when a student answers 20 questions or less or answers with b, c, d, e, f, g, or h 15 or more times in a row. When this occurs, all values except the demographic variables are set to missing.

## Calculated Variables

**Introduction** Describes how the race/ethnicity, overweight, obese, and dichotomous variables are calculated

**Race/Ethnicity** **Note:** The following description of creating the race/ethnicity variable is based on the standard response options for Q5. Sites may modify the response options to better represent their population. Data from sites that modify Q5 are processed in a manner comparable to the standard question.

Race/ethnicity (*raceeth*) for the 2021 YRBS is computed from two questions:

- |    |  |
|----|--|
| 4. | Are you Hispanic or Latino?                        |
|    | A. Yes   |
|    | B. No  |
| 5. | What is your race? (Select one or more responses.) |
|    | A. American Indian or Alaska Native                |
|    | B. Asian   |
|    | C. Black or African American                       |
|    | D. Native Hawaiian or Other Pacific Islander       |
|    | E. White   |

Ethnicity (Q4) is scanned as a single column variable with either A or B as valid responses. Race (Q5) is the only YRBS question that permits the selection of more than one response. It is a “check all that apply” type question and is scanned as an eight-column character variable. If the student selected “A”, then the first column contains an “A”. If they selected “B”, then the second column contains a “B”, and so on.

Prior to 2007, a single question was used to ascertain race/ethnicity. To maintain comparability, *Q4* and *Q5* are combined to create the two-column *raceeth* variable. If the student selected “B” for *Q4* and only one response option for *Q5* then *raceeth* is set to a number between “1” and “5” depending on the *Q5* option selected. If they selected “A” for *Q4* and no response for *Q5*, *raceeth* is set to “6” indicating “Hispanic/Latino”. If they selected “A” for *Q4* and one or more responses for *Q5*, then *raceeth* is set to “7” indicating “Multiple – Hispanic/Latino”. If they selected “B” for *Q4* and more than one response for *Q5*, then *raceeth* is set to “8” indicating “Multiple – Non-Hispanic/Latino”. *Raceeth* is set to “missing” if they answered “B” to *Q4* and left *Q5* blank, or they left *Q4* blank regardless of the response for *Q5*, or if *Q4* or *Q5* is out of range.

<i>Ethnicity</i>	<i>Race</i>	<i>Raceeth (Values and Labels*)</i>
B	A	1 (American Indian/Alaskan Native)
B	B	2 (Asian)
B	C	3 (Black or African American)
B	D	4 (Native Hawaiian or Other Pacific Islander)
B	E	5 (White)
A	Missing	6 (Hispanic/Latino)
A	1 or more responses	7 (Multiple– Hispanic/Latino)
B	2 or more responses	8 (Multiple– Non-Hispanic/Latino)
B	Missing	Missing
Missing	Missing or Any response	Missing
Out of range	Any response	Missing
Any response	Out of range	Missing

\*Labels are based on standard response options. Labels will vary if the site modified the Q5 response options. The site may modify the Race question by adding response options up to a total of 8. The values for “Hispanic/ Latino”, “Multiple – Hispanic/Latino”, and “Multiple Non-Hispanic/Latino” will vary according to how many response options are included in Q5. For example, if a site has 7 response options for Q5, then the values for “Hispanic/Latino”, “Multiple – Hispanic/Latino”, and “Multiple Non-Hispanic/Latino” would be 8, 9, and 10, respectively.

**Percentile, Overweight, and Obese**

Age (Q1), Sex (Q2), and BMI are used to determine *Overweight*\* (QNOWT) and *Obese*\* (QNOBESE). The student is considered overweight, and QNOWT is set to “1”, when BMI percentile is at or above the 85<sup>th</sup> percentile and below the 95<sup>th</sup> percentile for BMI by age and sex. The student is considered obese, and QNOBESE is set to “1”, when BMI percentile is at or above the 95<sup>th</sup> percentile for BMI by age and sex. If BMI is missing, then QNOWT and QNOBESE are set to missing. QNOWT and QNOBESE are mutually exclusive. The BMI percentile for age and sex (BMIPCT), QNOWT, and QNOBESE variables are included in the edited data set.

The “SAS Program for the 2000 CDC Growth Charts” developed by the CDC’s Division of Nutrition, Physical Activity, and Obesity has been used to calculate BMI and BMI percentile for age and sex, and to generate QNOWT and QNOBESE. This program and technical documentation for its use are posted at:

<https://www.cdc.gov/nccdphp/dnpao/growthcharts/resources/sas.htm>

---

\* Note: YRBS reports prior to 2009 used the terms "overweight" to describe those youth with a BMI ≥95th percentile for age and sex and "at risk for overweight" for those with a BMI ≥85th percentile and <95th percentile. However, the terms "obese" and "overweight" were used in 2009 and forward in accordance with the 2007 recommendations from the Expert Committee on the Assessment, Prevention, and Treatment of Child and Adolescent Overweight and Obesity convened by the American Medical Association (AMA) and cofunded by AMA in collaboration with the Health Resources and Services Administration and the CDC.

and are available for use by anyone who would like to regenerate the variables. Note the units required by the SAS program are specified in the documentation available at the web site referenced above. YRBS data for height are stored in meters but the program requires height in centimeters. The program requires age in months, but YRBS only has age in years. Therefore, age in months is approximated by adding six months to the age in years reported by the respondent. That is, if a YRBS respondent reports that they are 14 years of age, their age in months is calculated as (14 years \* 12 months) + 6 months = 174 months.

---

**Dichotomous Variables**

There are two types of dichotomous variables - **QN#** and **QNword**. The dichotomous variables present the percentage of students answering the predetermined response(s) of interest (ROI). Students answering the ROI(s) are in the numerator. The denominator is either all students or a subset of students who have indicated they participate in a selected activity or behavior. Students must have provided valid data to be included in any dichotomous variable calculations. Therefore, students with missing responses or who had their answers subverted are not included. The variables are created and added to the master datasets during editing. The results are presented in the summary tables and graphs in your YRBS report.

---

**QN# Variables:** Each standard question will have a corresponding dichotomous variable. The name of the dichotomous variable corresponds to the original question number. For example, the dichotomous variable for Q10 is named QN10. The table below provides the question and response options used for each standard Q# variable and related QN# variable. The bolded responses indicate the ROIs for that question. The ROIs are set to “1” for the QN# variables; the remaining responses are set to “2” or to “missing” for the QN# variable. The numerator and denominator are further defined below the responses.

See Appendix A for the list of the YRBS questions and dichotomous variables

---

**QNword Variables**

**QNword** variables are supplemental, dichotomous variables that are calculated based on results from one or more than one question. How these variables are derived, including which students are used in the numerator and denominator, are explained in Appendix B.

See Appendix B for the list of the YRBS supplemental (QNword) variables.

## Data Analysis Variables

<b>Weight</b>	A weight based on student sex, race/ethnicity, and grade level was applied to each record to adjust for school and student nonresponse and oversampling of black and Hispanic students. The overall weights were scaled so that the weighted count of students equals the total sample size, and the weighted proportions of students in each grade match the national population proportions. Thus, the data are representative of students in grades 9-12 in public and private schools in the United States. “WEIGHT” indicates the weight factor assigned to each student record.
<b>Stratum</b>	The sample design employed a three-stage cluster sample stratified by racial/ethnic concentration and MSA status. “STRATUM” indicates the stratum the school the student attends was assigned to.
<b>PSU</b>	PSUs consist of counties, groups of smaller adjacent counties, or sub-areas of very large counties. “PSU” indicates the PSU the school the student attends was assigned to.
<b>For More Information</b>	See “ <a href="#">Methodology of the YRBSS</a> ” and “ <a href="#">Software for Analyzing YRBS Data</a> ” on the YRBS web site at <a href="http://www.cdc.gov/yrbss">www.cdc.gov/yrbss</a> for more information.

## Analysis Software Technical Notes

**Introduction**      Explains the requirements for software that can precisely calculate sampling variances for cluster sample designs that must be used when analyzing YRBS data.

---

**Software Requirements**      The YRBS uses a multi-stage cluster sample design. Statistical software used to analyze YRBS data should account for this design. Although the point estimates should always match, there will be small differences in the confidence intervals as different methods for calculating standard error are used. Many packages with this capability are available. For more information on five statistical packages (SUDAAN, SAS, STATA, SPSS, and Epi Info) that can be used to analyze YRBS data, refer to the [Software for Analysis of YRBS Data](#) document on the YRBS web site at:

<http://www.cdc.gov/healthyouth/data/yrbs/methods.htm>.

---

## Sexual Minority Data Analysis Notes

**Introduction**      Explains the best practices for analyzing data from the sexual identity and sex of sexual contacts questions on the national YRBS.

---

**Background**      Sexual identity and sex of sexual contacts may both be used to identify sexual minority youth. Sexual minority youth defined by sexual identity include those who identify as gay, lesbian, and bisexual and those who are not sure about their sexual identity. Sexual minority youth defined by sex of sexual contacts include those who have had sexual contact with only the same sex or with both sexes.

For the 2021 YRBS cycle, a question asking about sexual identity and a question asking about sex of sexual contacts was included in the core questionnaire used by the states and local school districts and to the national YRBS questionnaire. More response options were provided for the sexual identity question in 2021 compared to previous years. For more information on how to analyze the YRBS sexual minority data, please refer to the [How to Analyze YRBS Sexual Minority Data](#) document on the YRBS website at:

<http://www.cdc.gov/healthyyouth/data/yrbss/methods.htm>.

## Codebook

**Introduction** The codebook documents the SAS, SPSS, MS Access, and ASCII data files available for public use. See Appendix C for the codebook information for each variable in the data files.

The columns in the codebook include the following information:

---

**Data Location** This column contains the numbers indicating the beginning and ending column position for each variable. The data location is relevant only when you are using the ASCII formatted data file; for the other files, you will reference data by variable name, not location.

**Variable Name** This column contains the variable names listed in the order that the variables appear in the data files. Please refer to Section 4 of this document for more details on variable types and dichotomous variables.

**Question Code and Label** This column contains information about each variable in the data file. For each question (Q1 through Q99), this column contains question text, response option codes, and response option text. For QN# and QNword variables, this column contains text that summarizes the “responses of interest”, and the codes “1” and “2” for “Yes” and “No” respectively to indicate whether or not the response was one of the “responses of interest”.

**Unweighted Frequency** This column contains the number of students who chose a specific response option or response of interest.

**Weighted Percentage** This column contains the percentage of students who chose a specific response option or response of interest. These percentages are weighted and represent students in the United States.

2021 YOUTH RISK BEHAVIOR SURVEY

---

Q11. During the past 30 days, on how many days did you **text or e-mail** while **driving** a car or other vehicle?

A. I did not drive a car or other vehicle during the past 30 days  
B. 0 days  
C. **1 or 2 days**  
D. **3 to 5 days**  
E. **6 to 9 days**  
F. **10 to 19 days**  
G. **20 to 29 days**  
H. **All 30 days**

Variable label: Texting and driving

Short response:

A. Did not drive  
B. 0 days  
C. **1 or 2 days**  
D. **3 to 5 days**  
E. **6 to 9 days**  
F. **10 to 19 days**  
G. **20 to 29 days**  
H. **All 30 days**

QN11\*: Numerator: Students who answered C, D, E, F, G, or H for Q11  
Denominator: Students who answered B, C, D, E, F, G, or H for Q11  
Summary text: Percentage of students who texted or e-mailed while driving a car or other vehicle (on at least 1 day during the 30 days before the survey, among students who had driven a car or other vehicle during the 30 days before the survey)  
QN variable label: Texted or e-mailed while driving a car or other vehicle

Q12. During the past 30 days, on how many days did you carry a **weapon** such as a gun, knife, or club **on school property**?

A. 0 days  
B. **1 day**  
C. **2 or 3 days**  
D. **4 or 5 days**  
E. **6 or more days**

Variable label: Weapon carrying at school

QN12: Numerator: Students who answered B, C, D, or E for Q12  
Denominator: Students who answered A, B, C, D, or E for Q12  
Summary text: Percentage of students who carried a weapon on school property (such as a gun, knife, or club, on at least 1 day during the 30 days before the survey)  
QN variable label: Carried a weapon on school property

Q13.	<p><b>During the past 12 months</b>, on how many days did you carry a <b>gun</b>? (Do <b>not</b> count the days when you carried a gun only for hunting or for a sport, such as target shooting.)</p>
	<p>A. 0 days  <b>B. 1 day</b>  C. 2 or 3 days  D. 4 or 5 days  E. 6 or more days</p>
	<p>Variable label: Gun carrying</p>
QN13:	<p>Numerator: Students who answered B, C, D, or E for Q13  Denominator: Students who answered A, B, C, D, or E for Q13  Summary text: Percentage of students who carried a gun (not counting the days when they carried a gun only for hunting or for a sport such as target shooting, on at least 1 day during the 12 months before the survey)  QN variable label: Carried a gun</p>
Q14.	<p>During the past 30 days, on how many days did you <b>not</b> go to school because you felt you would be unsafe at school or on your way to or from school?</p>
	<p>A. 0 days  <b>B. 1 day</b>  C. 2 or 3 days  D. 4 or 5 days  E. 6 or more days</p>
	<p>Variable label: Safety concerns at school</p>
QN14:	<p>Numerator: Students who answered B, C, D, or E for Q14  Denominator: Students who answered A, B, C, D, or E for Q14  Summary text: Percentage of students who did not go to school because they felt unsafe at school or on their way to or from school (on at least 1 day during the 30 days before the survey)  QN variable label: Did not go to school because they felt unsafe at school or on their way to or from school</p>
Q15.	<p>During the past 12 months, how many times has someone threatened or injured you with a <b>weapon</b> such as a gun, knife, or club <b>on school property</b>?</p>
	<p>A. 0 times  <b>B. 1 time</b>  C. 2 or 3 times  D. 4 or 5 times  E. 6 or 7 times  F. 8 or 9 times  G. 10 or 11 times  H. 12 or more times</p>
